12VDC unit allows remote operation of a truck-mounted snowplow. Includes built-in crossover reliefs which help protect snowplow blades from damaging obstructions and a heavy-duty remote control station that operates the blade up/down and left/right when used with 1 single- and 1 double-acting cylinder. Adjustable relief is preset at 2500 psi for larger blades. Included 2-qt. nominal plastic reservoir. Horizontal mounting only.

12VDC Power Units with Control Station

BUCHER hydraulics / MONARCH Hydraulics, Inc. — MAXIM — CHIEF

MONARCH

Basic Power Unit—For remote requirements using special manifolds for control.

Manual Release—Designed for single-acting cylinders on lift, hold, and lower circuits. Features a multidirectional handle control. Includes a manual lowering valve.

No. 36NE07

Remote Release with Control Station—Controls lift and hold circuits; includes a solenoid lowering valve, and 10-ft. cord for start and lower functions on single-acting cylinders.

Birotational Power Unit with Control Station—For use with horizontally configured cylinders. Directional solenoid valves are not required for use in double-acting cylinder applications. Includes 10-ft. cord.

Remote Double-Acting Power Unit—2-position, 4-way solenoid valve allows bidirectional control of double-acting cylinders and hydraulic motor applications. Includes a pilot-operated check valve and relief valve.

Note: Go to Grainger.com® for Accessory Control Stations. Search for "Control Station for Power Unit".

MAXIM™

For Power Up and Power Down operations and has a check valve, preventing reverse flow and protect pump. No. 35LP42 is for load holding in 1 direction. Includes a relief valve and manual valve. No. 35LP41 lifts, holds, and lowers and is prewired with a quick-disconnect remote. Horizontal mounting.

CHIEF

Solenoid-operated unit is designed to lift, hold, and lower and comes with a wired remote control.

DC Lift Truck Power Units and Motor Pump Assembly

BUCHER hydraulics / MONARCH Hydraulics, Inc.

- Valve pressure preset to 2500 psi

Nos. 36NE11 & 36NE12—Designed for single-acting cylinders on lift, hold, and lower circuits usually found on forklifts and other material handling equipment. Units include check, adjustable relief, and solenoid lowering valves. Horizontal or vertical mounting with a 45° elbow provided for vertical mounting.

No. 36NE10—Motor and pump unit includes check and relief valves. Vertical or horizontal mounting. Requires a remote reservoir.

Note: Does not include remote handset.

Char-Lynn®

General Purpose Motors/Rotary Actuators

No. 5PZF8

- Straight-keyed shafts
- Max. oil temp.: 180°F

H Series—Direct-drive motors are designed with spool valve technology for medium-duty applications. Include low-speed valving. Shaft speed and rotation direction can be controlled easily throughout the motors' entire speed range.

- Min. oil viscosity: 100 SUS
- Shaft size: 1" dia. x 1¾"L

S Series—Similar to H Series motors, but with precision-machined rollers to provide rolling contact support. Rollers further reduce friction for increased efficiency and extended motor life.

- Min. oil viscosity: 70 SUS
- Shaft size: 1" dia. x 1¾"L

Hydraulic Gear Pumps

- Right-hand rotation
- Pressure balanced
- SAE ORB Inlet/Outlet ports
- 10-micron filtration required

These reliable, high-efficiency gear pumps provide a comparably continuous, nonpulsating flow. Through-bore, bushing-type pumps for intermittent and continuous-duty applications. Lightweight design features aluminum center section with cast-aluminum end covers.

2-Stage Hi/Low Gear Pumps

For presses, log splitters, clamping units, and compactors. Automatic 2-speed operation. First-stage pump unloads fully at 450 psi; second stage operates up to 3000 psi. Generally, 5-HP input is required for No. 4F663 and 8-HP for No. 4F664. Clockwise rotation. ½" dia. x 1 ½"L drive shaft with #404 Woodruff drive key. Motor coupling and adapter not included. Direct drive only. Nos. 5ZPL6 and 5ZPL7 have SAE "A" ⅝" keyed shaft.

Parker

Threaded Cartridge Valves, Bodies, and Coils

Nos. 4DML7 and 4UA84—Provide uncompensated adjustable flow control.

Nos. 4DML8 and 4UA86—For continuous duty applications. Best option for setting hydraulic system pressure.

Nos. 4DML9 and 4UA87—Used as crossover relief valves to limit pressure spikes.

Nos. 4DMN1 and 4UA85—Can be used in a leg of a hydraulic system to reduce pressure lower than the system pressure. Also act as a relief valve, relieving pressure spikes between regulated port and actuator.

No. 4DMK4—Provides control of an overrunning load and metering, and is suitable for holding a load.

No. 4DML1—Flow goes in the nose, and pressure compensated flow goes out top port 3, while bypass flow is unregulated and goes out port 2.

No. 4DML3—Consists of a steel ball that can seal against 1 of 2 adjacent seats, providing a path from the highest pressure signal to another function.

No. 4DML5—In the side-to-nose direction, it performs as a standard needle valve, limiting flow. Allows free flow in the reverse direction, nose to side.

No. 4UA88—Use for on/off or as a selector switch for 2 functions. Often used for raising and lowering a single-acting cylinder.

No. 4UA89—Used for reversing valve for raising and lowering a double-acting cylinder or to control the actuation of a hydraulic motor.

Nos. 4UA90 and 4UA91—Require 2 coils to operate.

Hydraulic Cartridge Valve Base—Allow individual piping of threaded cartridge valves.

Flow Control, Needle, and Check Valves

No. 1A042

Brass valves are for pneumatic and medium-pressure hydraulic applications. Steel valves are for high-pressure hydraulic applications.

Flow Control—Provide precision flow control in 1 direction and automatically allow unrestricted free flow in opposite direction. 2-step needle allows fine adjustment at low flow.

Needle—Used as speed controls where a reverse flow check valve is not needed. May be used to control flow in both directions.

Check—Provide free flow in 1 direction and dependable shutoff in the opposite direction. Cracking pressure: 5 psi.

Note: Parker, DT, CV, and DC check valves are available; on Grainger.com®, search for "check valves."

Relief Valves

Control maximum pressure within a hydraulic circuit. No. 6X843 is designed for full flow with low pressure drop.

No. 4HL34 is a differential poppet inline relief that has a minimum variation between cracking and full flow pressures.

Nos. 4BA48 to 4BA50 have 2-stage balanced piston design, providing fast response and minimizing pressure override.

No. 4HL35 is a double differential poppet relief that is used in systems that require crossover relief protection such as a hydraulic motor.

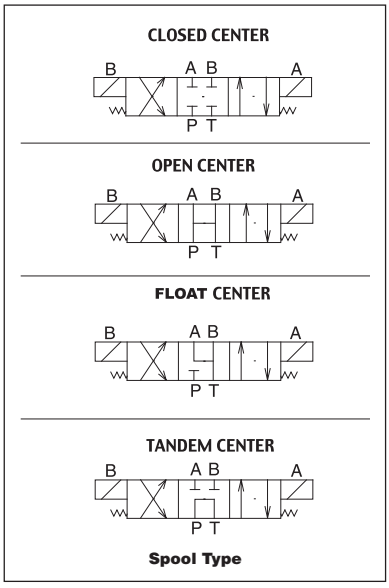
D03 and D05 Size Solenoid-Operated Directional Valves

Bolt kits for valves available separately.

Note: Additional solenoid-operated directional valves are available; on Grainger.com®, search for "solenoid-operated directional valves."

D03 SIZE



- Working port pressure (P, A, B): 5000 psi max.
- Max. tank pressure: 1500 psi AC, 3000 psi DC
- AC valves have conduit box-style termination; DC valves require wire connector plugs, Nos. 4UB23 and 4UB24, sold separately

Optimized valve body/spool design minimizes pressure drop and energy consumption. Compatible with D03 and CETOP-3 mounting patterns.

D05 SIZE

- Max. operating pressure: 5000 psi
- Max. tank pressure: 1500 psi AC, 3000 psi DC
- Integral conduit box for wire termination

Feature higher machine productivity and uptime. Compatible with D05 and CETOP-5 mounting patterns. Solenoid/core tube design allows coils to be changed without removing valve from installation. Manual overrides.

Monoblock Valves

- Load checks provided on all spools (except No. 1A967)
- All valves have direct-acting relief valves

Single-spool valves are 3-position and tandem center, 2- and 3-spool valves have a float spool. Nos. 6X845, 4HL36, 4HL37, 6W566, and 4HL32 can be converted to closed center or to power beyond operation; No. 6W565 can be converted to closed center only. No. 1A967 has a pressure detent release preset at 1200 psi.

Note: Additional stack valves are available; on Grainger.com®, search for "stack valves."

Double-Acting Tie-Rod Cylinders MAXIM

- Max. working pressure: 2500 psi
- Temp. range: -20° to 220°F

Cylinders feature precision-honed steel tube and ductile-iron piston with high-tensile strength chrome-plated rod. Polypak rod seals. Pins and clips are included. 1" pin dia., except Nos. 6FCX8, 6FCZ3, and 6FDC0 are 1¼" dia. Black color.

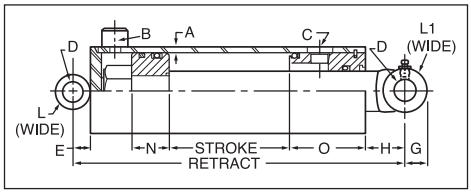
Double-Acting Ag/Mobile Welded Cylinders



- Max. working pressure: 2500 psi

Crosstube end mountings. All-steel welded construction. Heavy-wall honed steel tubing. Ground and polished chrome piston rod. Cast-iron ring, O-ring, and back-up washer packing on piston. Urethane U-cup rod seal. Truarc gland retainer. Cylinders will operate at full pressure through 24" stroke except: No. 5Z369 with limit of 13,000 lb. (1839 psi) in extension; No. 5Z370 with limit of 13,540 lb. (1407 psi) in extension; and No. 5Z371 with limit of 9700 lb.

MAXIM

Double-Acting Ag/Mobile Welded Cylinders

- Max. working pressure: 3000 psi
- Temp. range: 20° to 220°F

Cross-tube mounted cylinders feature ductile-iron pistons and precision-honed steel tubes, with Polypak rod seals and high-tensile strength chrome-plated tie rods. Black finish.

No. 2XKK7

Miller FLUID POWER

Hydraulic Cylinders

- Max. pressure: 2500 psi
- Temp. range: -20° to 160°F
- All-steel construction with black finish
- Modular mounting design

6", 8", 10", and 12" stroke cylinders have adjustable cushions on both ends. Piston rods are case hardened and hard chrome plated to resist mechanical damage. Urethane rod seal and nitrile piston seals are compatible with standard hydraulic fluids. Optional magnetic piston will actuate Position Sensors Nos. 4YRD6 or 4YRD7.

Note: Compact Hydraulic Cylinders available on Grainger.com®.

Miller FLUID POWER

Compact Hydraulic Cylinders

- Temp. range: -10° to 165°F
- Aluminum body and piston

Almost half the length of comparable bore and stroke tie rod construction products. Piloted rod gland with long bearing area allows precise alignment of cylinder and load center lines. Standard SAE O-ring ports make leak-free hydraulic line connections.

POSITIONING SENSORS

- Max. switching current: 100mA

Cost-effective alternative to machine-mounted switches for providing accurate indication of load position. Low-profile design keeps switch within compact cylinder body envelope. Solid-state switches use GMR technology to ensure precision, reducing hysteresis characteristics.

EATON | Aeroquip

High-Pressure Hose Assemblies

- Temp. range: -40° to 212°F
- 4:1 safety factor

These Eaton Aeroquip FC579 hydraulic hose assemblies are suitable for high-pressure applications and have crimped-on rubber strain relief on their ends that helps extend the hoses' life. They have an abrasion-resistant SBR (styrene-butadiene rubber) tube and cover and are reinforced with two layers of steel wire braids for strength. The hose exhibits low volumetric expansion under pressure, which helps maintain the efficiency of the hydraulic system. These hydraulic hose assemblies are used for hydraulic jacking applications with petroleum- and water-based fluids. They come with fittings installed on both ends and are ready to connect to compatible equipment. Meet or exceed EN857, type 28C.

ENERPAC

Thermoplastic Hose Assemblies

- 1/4" inside dia.
- Max. pressure: 10,000 psi
- 4:1 safety factor

Enerpac H700 hydraulic hose assemblies are designed to exhibit low volumetric expansion under pressure, which helps maintain the efficiency of the hydraulic system. They come with NPTF (National Pipe Taper Fuel) fittings installed on the ends of the hoses and are ready to connect to equipment. These hoses are used for transferring petroleum- and water-based fluids in hydraulic systems. They have crimped-on rubber strain relief on the ends of the hose that helps extend its life. These hoses have a thermoplastic tube and an abrasion-resistant polyurethane cover. They are reinforced with two layers of steel wire braids.

10,000 PSI Hose Assemblies

- Max. pressure: 10,000 psi

All comply with Material Handling Institute IJ-100 hose specification. Dust caps included. All hoses, except No. 6BU60, 18Y529, and 18Y530 are rubber with black rubber external coating over 2 layers of steel wire braid. No. 6BU60 thermoplastic hose has a 4:1 safety factor and yellow polyurethane jacket. Use No. 3KD64 with Coupler No. 3KD28 (sold separately). Cylinder No. 6Z782 (sold separately on page 2468), and Hand Pump No. 6W461 (sold separately on page 2466).

MatchMate® Hose and Crimpable Fittings

EATON | Aeroquip

- Hose fittings are specific to the hose brand
- Synthetic rubber hose with 1-, 2-wire
- Temp. range: -40° to 212°F
- 4:1 safety factor

Hose has color-coded layline for easy identification and installation. Simply match ring symbols on hose to corresponding symbols on fittings, then match color of layline with color of dies to securely crimp hose and fittings. GH793 series also used with screw-together type fittings.

Note: Use Aeroquip® fittings with Aeroquip® hose. Crimping machines sold on page 2483.

EATON Synflex®
Hose and Crimpable Fittings

- Hose fittings are specific to the hose brand
- 4:1 safety factor
- Temp. range: -40° to 212°F

Lightweight and easy-to-route hose is made of nylon tube with polyurethane cover and braided synthetic fiber reinforcement. Fittings are steel with RoHS trivalent chromium zinc plating.

No. 10C379

No. 35Z762

EATON | Aeroquip
Hydraulic Crimping Machines

- 5 tons of force
- Max. pressure: 10,000 psi

Lightweight, portable crimping devices crimp MatchMate® hose and fittings sold on page 2482, as well as Synflex® hose and fittings sold on page 2483. 1- and 2-wire, ¼" to 1¼" I.D. hose capacity, except No. 35Z762 crimps hose styles from 3/16" through 2" I .D. including 4- and 6-spiral wire crimp-style fittings. All models feature positive stop crimping.

Note: Machine Nos. 4YNW9 and 33N457 require 10,000 psi pump, available on page 2466, and hose, available on page 2481.

Note: For Collet and Die Kits, see Grainger.com®

Crimping Machine, No. 35Z762 —Model has front-end loading design, electronic keypad control for crimp diameter, drop-in tooling (crimp die cages), power return stroke, return limit control, and backstop fitting locator.

MatchMate® 4-Wire Hose and Crimpable Fittings
EATON | Aeroquip

- Hose fittings are specific to the hose brand
- 4:1 safety factor
- Synthetic rubber hose with 4-wire spiral reinforcement
- Temp. range: -40° to 250°F

For hydraulic system service with petroleum and water-based fluids and general industrial use.

Hose Crimp Machines

30 ton max. crimping force. Up to 1¼" hose capacity.
Crimping tool dies are available on Grainger.com.

Description	Includes	Mfr. Model	Item No.
Without Pump			
Portable, 12"D x 30H" x 15"W	10,000 psi Pump Nut, Crimp Head, Silver Die Ring, Black Die Ring, Hose Assembly, Stand Assembly	82C-061L	**21A867**
With Pump			
Bench Mount, 20"D x 25H" x 26"W	Crimp Head, Bench Power Unit Assembly, Silver Die Ring, Black Die Ring, 115/230V Power Unit	80C-061	**21A868**

EATON | Aeroquip

FC300 Hose and Reusable Fittings

- Hose fittings are specific to hose brand
- 4:1 safety factor
- Temp. range: -55° to 300°F
- Screw-together reusable type fittings

Hose transfers oil, air, gasoline, fuel oils, lubricating oils, and fire-resistant hydraulic fluids. Aeroquip elastomer tube, polyester inner braid, and single-wire braid reinforcement with blue polyester braid cover.

Note: Reusable fittings fit FC300 hose only.

High-Pressure Hydraulic Fittings

- Max. pressure: 10,000 psi

Steel fittings are designed for high-force hydraulic tools. Static hydraulic only (nonimpulse).

No. 2F457

No. 46C628

High-Pressure Hydraulic Couplers

ENERPAC SAFEWAY

- Max. working pressure: 10,000 psi

ENERPAC

Dust caps included (except flush-face model).

High-Flow—Poppet-style with crimped seal retention.

Flush-Face—Engage sleeve-locking mechanism by rotating sleeve after connection. Zero leaks.

SAFEWAY

S30 Series—Heavy-duty poppet valving, while fully interchangeable with ball check models (including older SafeWay product), eliminates low pressure leakage.

¼" High-Pressure Coupler Set—Use with No. 6W461 hand pump on page 2466 and No. 6Z782 cylinder on page 2468. Dust cap for female half only.

No. 6BU53

No. 2F769

Snap-tite Couplers and Plugs

Innovative, high-pressure components suitable for use with oil and gas. For additional sizes, go to Grainger.com®.

71 Series—Feature superior flow and low pressure drop.

EA Series—Design allows clean linear flow for low pressure drop.

H Series—For use where single or double shut-off valving is required.

Straight Through H Series—For use when no valving is required.

Parker

Fluid Analysis Test

Helps prevent major hydraulic or lube oil system failures. Collect a small amount of fluid and use the included mailing labels to send sample to the lab. A full report will be returned.

Particle Count, Photomicrograph, Free Water, Spectrometric, Viscosity, Water (ppm), and Neutralization Analysis	**4VA89**

Portable Oil Filtration Systems

No. 1XPW9

Handheld System—Lightweight system features 115VAC, auxiliary ports, and fluorocarbon seals. Includes 10-micron cellulose filter element and 2 clear, 5-ft. hose assemblies with wand attachments. Max. operating pressure: 50 psi. 25 psi differential pressure indicator.

- Temp. range: -15° to 120°F

Cart Systems—Ideal in pre-filtering and transferring fluids into reservoirs or cleaning up existing systems. Filter cart processes fluid through a primary 40-micron synthetic element, then a secondary 10-micron cellulose or Microglass element. Includes 2 hoses with wands.

- Max. temp.: 150°F

Hydraulic Return Line Spin-On Filters

- Max. pressure: 150 psi
- Max. temp.: 225°F
- Cast-aluminum head
- 15 psi bypass spring

Microglass filter has higher dirt-holding capacity for longer usable filter life. Elements are interchangeable with major brands size: 1-12 thread for 20 gpm, 1 1/16-16 thread for 50 gpm models. Dual Buna N seals resist leaks up to 150 psi.

Head has ⅛" (F)NPT port with optional Gauge/Indicator No. 2C492 sold separately.

AC Motor Driven Forced Air Oil Coolers

AKG®

- Brazed aluminum with black painted finish
- Max. temp.: 250°F
- Mounting feet included

Cool-Line A Series oil coolers offer maximum cooling effectiveness with minimum pressure drop. Aluminum bar/plate cooler construction is 30% to 50% smaller than copper tube/aluminum fin oil coolers for same heat transfer performance. Hollow profile design reduces local peak strains for a significant increase in cooler service life. Performance is based on oil entering cooler 50°F higher than ambient air temperature. For Replacement Motors, call 1-800-GRAINGER (472-4643). On Grainger.com®, search by Grainger Item Number and click Optional Accessories.

Off-Line Forced Air Oil Coolers

AKG®

- Gearmotor type
- Spin-on filter
- Steel fan guard
- Mounting feet included
- 230/460V

High-performance aluminum cooler assemblies come complete with integrated 1750 rpm pump/motor and filter for cooling, filtration, or lubrication circuits in industrial or mobile applications. Excellent in low-pressure systems that use fluids with varying viscosities, and that have varying flow rates or pressure spikes in return lines. Pump flow range: 8.9 gpm to 45.1 gpm. Spin-on filter has a 9 micron rating with 50 psi bypass valve and visual indicator.

How To Size a Hydraulic Oil Cooler

1. Find the system oil flow (GPM).
2. Size the heat exchanger to remove approximately 30% of input horsepower.

To find input horsepower, multiply the system pressure (PSI) times the system flow (GPM), then divide by 1714 (PSI x GPM ÷ 1714).

To find an approximation of the BTU removed, multiply the horsepower heat removed by 2545.

No. 4UJF5

Air-Cooled Oil Coolers

AKG®

No. 4UJD5

- Brazed aluminum
- Max. pressure: 250 psi
- Max. temp.: 250°F
- Universal mounting bracket included

Deliver maximum cooling performance while minimizing pressure drop. Designed for rugged environments. Nonlouvered external fin prevents clogging and is easy to clean. Aluminum bar/plate cooler construction is 30% to 50% smaller in size than copper tube/aluminum fin oil coolers for same heat transfer performance. Cooler performance is based on oil entering cooler 100°F higher than ambient air temperature. 1000 standard ft. per minute (sfpm) air velocity.

DC Motor Driven Forced Air Oil Coolers

AKG®

- Brazed aluminum with black painted finish
- Max. pressure: 377 psi
- Max. temp.: 250°F
- IP 68 frame
- Mounting bracket included

Cool-Line D Series oil coolers maximize cooling capability while minimizing pressure drop. Ideal for rugged environments. Easy-to-clean, nonlouvered external fin prevents clogging. Aluminum bar/plate cooler construction is 30% to 50% smaller than copper tube/aluminum fin oil coolers for the same heat transfer. Hollow profile design reduces local peak strains, significantly increasing cooler service life. Performance is based on oil entering cooler 100°F higher than ambient air temperature.Brushless DC Motors are rated to 40,000 hours. Coolers with bypass valves are available on Grainger.com.

Water-Cooled Oil Coolers

Lovejoy

- Max. oil pressure: 580 psi
- Max. water pressure: 230 psi

Highly efficient and compact design features aluminum fins that are mechanically bonded to copper tubes to extend cooling surface area. Removable end caps allow easy access for cleaning. Mounting brackets may be rotated for easy installation and design flexibility. Industry standard design allows interchangeability.

Hydraulic Accumulators and Repair Kits

CHARGING AND GAUGING KIT

Can be used for charging either a bladder or piston accumulator. Includes 10-ft. hose with fittings, adapter and gas valve, bleeder valve, gas chuck, and pressure gauge.**ACCUMULATORS**

- Steel housing
- Max. pressure: 3000 psi

Bladder—Made from chrome-molybdenum alloy steel with forged ends.

- Temp. range: -20° to 200°F

Diaphragm—Lightweight, welded, completely sealed accumulators can be mounted in any direction. Hydrin diaphragm bag. Not serviceable.

- Temp. range: -40° to 176°F

Piston—Vertical-mount, serviceable accumulators have Buna N O-ring seals.

- Temp. range: -20° to 165°F

Steel Hydraulic Reservoirs

Feature 11-ga. hot rolled steel construction and oil sight gauge with thermometer. Filler breathers filter air to 40 microns and provide easy access for adding hydraulic oil. Include appropriately sized and placed suction and return connections.

Nos. 24W699, 24W701, and 24W702 have convenient cleanout covers.

Nos. 24W703 and 24W704 include internal baffles with cutouts.

Lovejoy

Aluminum Hydraulic Reservoirs and Tanks

Aluminum construction provides twice the heat dissipation of steel reservoirs.

RESERVOIRS

Include tank, oil sight gauge and filler breather, lid gasket, and lid with return/suction ports.

LEG KITS

Can be used with either reservoirs or tanks to improve air circulation under the tank.

ENVIRO SEALS

Heavy-duty seals help prevent oil leaks and can be used with either reservoirs or tanks.

TANK LIDS

Easily modified to accept vertical or horizontal pump/motor configurations and mounting of additional system hardware. Include lid, gasket, and fasteners.

SPEEDAIRE PORTER CABLE BOSTITCH SENCO

Pneumatic Finish and Brad Nailers

FINISH NAILERS

Feature include depth-of-drive adjustment, over-molded rubber grip, and no-mar tip. Oil-free.

Speedaire®—Feature adjustable exhaust, quick jam release, belt hook, and adjustable trigger.

Porter Cable®—Nailers have an adjustable exhaust, sequential-style trigger with lockoff switch, and adjustable belt hook.

Bostitch®—No. 45YJ66 has a tool-free jam release mechanism for easy nail removal and includes sample finish nails, extra no-mar tips, and carrying case.

No. 3FWY2 features tool-free jam release, selectable trigger and tool-free adjustable belt hook. Includes sample fasteners, ¼" fitting, and carrying case.

Senco®—No. 21U129 has a rugged and magnesium body, sequential-style trigger, 360° adjustable exhaust, comfort grip, belt hook, and easy-clear latch.

BRAD NAILERS

Feature adjustable work contact element and adjustable drive depth. Clear jams quickly; load easily. Include rechargeable battery, charger, safety glasses, and case. No. 48LR72 features an LED light.

Notes: Pin Nailers available on Grainger.com®.

Bostitch®—No. 3FWY3 features tool-free access to drive channel, dry-fire lockout, and quiet rear exhaust. Includes 100 brad nails, hex wrench, belt hook and carrying case.

Pneumatic Framing Nailers

Clipped Head—Drives ring, screw, and smooth-shank 34° paper taped strip nails. High-efficient internal design reduces less wear and tear. Eliminates jams and mis-feeds and fits easily between studs and joints.

Full Round Head—No. 35JG54 features a TrueDrive magazine to help reduce misfeeds and jams. Low-profile design allows use in tight spaces. No. 5KNH5 has a magnesium body with a 130:1 power-to-weight ratio and 1050 in.-lb. of driving power. Use in engineered lumber. Features tool-free push-button drive depth control, adjustable exhaust, and steel backer plate.

Offset Round Head—Features tool-free adjustable exhaust and push-button depth of drive.

BOSTITCH SENCO

Pneumatic Coil Roofing Nailers and Nails

These nailers feature depth-of-drive adjustment for added versatility. No. 4Z782 has contact trip trigger and magnesium housing for durability. Features fixed exhaust, single-action canister, rubber housing pads that prevent sliding, and tool-free shingle gauge. Hardened nose with carbide inserts resists wear. No. 48LR62 features an innovative firing valve that reduces air consumption without a reduction in speed or power. Includes an adjustable and removable shingle guide.

SPEEDAIRE Ingersoll Rand Chicago Pneumatic

Air Ratchets

- Max. psi: 90
- Air inlet: ¼"
- Min. hose size: ⅜"

All feature ball detent for easy socket change, reversible operation, ball and needle bearing construction, and lever throttle for variable speed control. No. 5LA66 has a push-button throttle.

No. 45NW45

No. 5LA63

Light-Duty Kit, No. 48MA09— Includes ratchet wrench No. 48LZ90, 3" extension bar, (16) impact sockets, 13/16" spark plug.

No. 11C948

Ingersoll Rand

Air Tool Combination Kit

Popular air tool for general maintenance, automotive repair, and metalworking.

Description	Item No.
7-Pc. Mechanic's Wrench/Ratchet Kit, Includes 107XPA Air Ratchet, 231C Impact Wrench, (5) Sockets (½, 9/16, ⅝, ¾, and ⅜ to ½" Adapter), & Case	**5LA54**

Pneumatic Nut Runners

Ingersoll Rand SPEEDAIRE

- Required psi: 90
- Min. hose size: ¼" (No. 45NW63 is ⅜")

Provide fast screw/nut rundown and removal. 90° angle heads allow access to tight locations.

Note: For more pneumatic nut runners, see Grainger.com®.

Pneumatic Impact Screwdrivers

Ingersoll Rand SPEEDAIRE

- Required psi: 90
- Air inlet: ¼" NPT
- Min. hose size: ⅜"
- Use ¼" hex bits
- Integrated power regulator
- Reversible
- Lift bail included

Ergonomic screwdrivers feature extremely durable impact mechanism that delivers high-speed reactionless power capable of handling high cycle rate assembly applications.

† Full load cfm is based on a 1-min. run time.

Adjustable Cushion Clutch—Controls torque output to the bit. Straight handle units come with suspension bails.

Direct Drive Clutch—General duty for large and medium screws.

Positive Action Clutch—Standard-duty, for use with soft-draw applications. Variable-speed throttle. Through-handle exhaust.

Positive Jaw Clutch—Clutch engages when the operator starts the motor and presses the tool toward the fastener. Designed for applications where driving torque may exceed final seating torque.

Precision Shut-Off Clutch—Designed for precision torque applications. Units come with suspension bails.

POP® Avdel® SPEEDAIRE

Pneumatic Thread Inserters

- Air Inlet: ¼"
- Min. hose size: ⅜"

Spin-pull-to-pressure technology allows insert setting for varying application thicknesses without the need for adjustment. Push-to-thread on mandrel allows automatic reversing and unthreading when insert is set. Pop Avdel® models do not include mandrels, nosepieces, or adapters; see Grainger.com®.

Pneumatic and Battery-Operated Riveters

Set uniform rivets in any position.

General-Duty Pneumatic—2-pc. jaw system increases jaw traction. Internal vacuum for No. 45RM38 holds mandrel in position for any-angle tool operation.

Industrial-Duty Pneumatic—No. 4WL12 includes a spare set of jaws, jaw pusher, and spare jaw pusher spring. Nos. 3CRH6 and 3CRH7 have internal vacuum, holding mandrel in place for any-angle tool operation.

Industrial-Duty Pneumatic with Mandrel Collection System—Quick-disconnect allows components to be serviced without tools. Swivel air fitting reduces air consumption with On/Off switch.

- Min. hose size: 3/8"

Pneumatic Right-Angle Die Grinders

- Lever throttle

Note: All units can use either carbide burrs or mounted grinding stones, sold separately on pages 2298, 2299. Make sure that the carbide burr or grinding stone selected has the proper rating and spindle size. Not to be used with cutoff wheels.

LIGHT-DUTY KIT

No. 12V740 includes 2 collet wrenches, ¼" collet, ⅛" collet, 5 grinding stones with ¼" shank, and 5 grinding stones with ⅛" shank.

GENERAL-DUTY KITS

Include wrenches, a 2" backing pad, and 2 each of: 2" coarse-surface prep pads, 2" medium-surface prep pads, 2" fine-surface prep pads, 50-grit sanding discs, 36-grit sanding discs, and 24-grit sanding discs. No. 23Z014 includes tool, 2 wrenches, 6mm collet, 10 abrasive stones, plastic case, and manuals.

INDUSTRIAL-DUTY

Angle head gears can be greased through a built-in grease fitting.

Pneumatic Straight Die Grinders

- Required psi: 90
- Air inlet: ¼" NPT
- Min. hose size: ⅜"
- Lever throttle

Not to be used with cutoff wheels or grinding discs. All units can use either carbide burrs or mounted grinding stones, sold separately on pages 2298, 2299.

KIT NO. 48MA01

Includes Die Grinder No. 48LZ99, plus five ¼" and five ⅛" grinding stones, collet wrenches, and durable plastic case.

KIT NO. 1FYV2

Includes twenty 2" sanding discs, fifteen 3" sanding discs, 5 burs, 10 grinding stones, and molded carrying case.

Pneumatic Sanders

SPEEDAIRE · DYNABRADE · Ingersoll Rand · Chicago Pneumatic

- Required psi: 90
- Air inlet: ¼"
- Min. hose size: ⅜"

Note: See page 2370 for sanding discs.

No. 10D238—Includes 1 each of 3", 4½", and 5" sanding pads, setting steel bar, and L-shaped wrench.

No. 11C919—Includes: (1) Mini pistol disc sander with 3" Roloc pad, (10) 3" 80-, 100-, and 120-grit sanding discs, (1) 3" fine, medium, and coarse surface prep discs, and spindle wrench packed in a heavy-duty carrying case.

Nos. 11C929 and 5KB20—Side handle fits either left or right side. Include lockout nut and wrench.

No. 11C996—Features a rear exhaust and a pistol grip.

Nos. 13F677 and 13F678—Ergonomic offset handle provides greater operator comfort and control. Gearless design reduces downtime and maintenance costs.

Industrial-Duty Right-Angle—Nos. 13F686 and 13F687 rear exhaust-type sanders are for composite and fiberglass sanding. Nos. 13F659, 13F660, and 13F689 are low-profile rotational exhaust-type units with a high power-to-weight ratio and ergonomic design.

Industrial-Duty Straight-Line—Reload easily with quick action paper clamps. 1" stroke length. Use bodyfile sanding sheets.

Industrial-Duty Vertical—Use fiber discs and come with a 7" backing pad.

Pneumatic Random Orbital and Geared Dual-Action Sanders

- Vinyl pad face
- 3/16" orbit, except Nos. 3YY25, and 3YY26 have 3/32" orbit

Geared Dual Action (DA)—Dual-action motion pad provides swirl-free finishes. Come with a 6" foam-backed pad that accepts PSA sandpaper.

For Use With	Brand	Mfr. Model	Item No.
Tune Up Kits, include Rotor and Vane Set, Bearings O-Rings, Muffler Components

Chisel Scalers, Needle Scalers, and Kits

- Required psi: 90
- Air inlet: ¼" NPT, except where noted

Needle scalers are great for removing rust, paint, dirt, and weld on metal surfaces, even in tight spaces, corners, or curved surfaces. All models use a lever throttle except No. 3AAH8, which has a push-button throttle. Chisel scalers have ½" square shank.

Industrial-Duty Chisel/Needle Scaler Kit No. 3Y591—Includes Scaler No. 3Y590, (38) 5" needles, (19) 7" needles, 6⅛" angle chisel, 6⅛" straight chisel, 7" flat chisel, and case.

Industrial-Duty Chisel/Needle Scaler Kit No. 3AAH6—Includes Scaler No. 3AAH7, 19 needles, flat chisel, moil point chisel, angle chisel, and case.

Industrial-Duty Chisel/Needle Scaler Kit No. 12V732—Includes 3 chisels, (38) 5" needles, (19) 7" needles, ¼" air nipple hex wrench, and plastic case.

No. 12V729

SPEEDAIRE

Ingersoll Rand

Chicago Pneumatic

Air Hammers

- Required psi: 90
- Air inlet: ¼" NPT
- Min. hose size: ⅜", except where noted
- Use 0.401" shank chisels (Nos. 45NW68 and 11C915 use 0.498")
- Spring-type chisel retainer

Suitable for chipping, general sheet metal cutting, light vehicle exhaust work, scraping, and rivet or joint removal and separation.

Note: Be sure that the chisel is held securely against the work surface and is never allowed to "free fire", or allow the chisel to strike the retainer.

LIGHT-DUTY

For general maintenance or shop use. Nos. 21AC12 and 21AC14 include spring retainer; Nos. 21AC12 and 48MA02 and include chisels.

GENERAL-DUTY

For automotive, general maintenance, or light construction.

GENERAL-DUTY KITS

No. 4UJL1—Includes 5-pc. chisel kit with edging tool, tail pipe cutter, ¾" flat chisel, cutting chisel, and punch.

No. 12V728—Includes spring retainer and 5 chisels.

No. 3JD19—Includes Hammer No. 2Z750 and 6 chisels packaged in a blow-molded plastic case.

INDUSTRIAL-DUTY

Designed for constant use. Suitable for construction, riveting, or production line use. Kit Nos. 23Z004 and 23Z006 include tool, quick change retainer, 5 chisels, blow-molded case, and manuals.

Note: For replacement chisels and retainers, see page 2514.

Ingersoll Rand SPEEDAIRE®

Chipping Hammers

- Required psi: 90

More blows per minute, or smaller stroke length means that the tool will work faster. Fewer blows per min. or longer stroke length means more power from the tool.

Note: Be sure that the chisel is held securely against the work surface and is never allowed to "free fire" or allow the chisel to strike the retainer. This practice could damage the retainer and break the barrel.

SPEEDAIRE®

For heavy-duty cutting, chipping, and scraping. Include chisel retainer, a quick-change retainer spring to easily change tools, and a variable-speed trigger.

INGERSOLL RAND NO. 4KR81

4-bolt blackhead design for easy serviceability. Features die-cast D-shaped handle and steel over-molded collar.

INGERSOLL RAND NOS. 3Y546, 3Y571, 3Y574, 3Y545, 6Z571, 4Z260, 3Y441, 3Y443, AND 3Y445

Special plated piston reduces wear and extends life. Forged steel throttle handle.

INGERSOLL RAND RIVET BUSTER NO. 3Y844

Features improved piston and shock-resistant material. Uses Jumbo 4-sided chisel tools. Suitable for rivet busting and general demolition.

Note: For chisels, see page 2514.

Ingersoll Rand

Diggers, Paving Breakers, Rock Drills, and Backfill Tamper

DIGGERS

Latch retainer-type diggers for light- and medium-weight use.

PAVING BREAKERS

More powerful with fewer parts than competitive models. Spring-loaded anvil bushing keeps tool on work surface. 1-pc. housing eliminates side rods and springs.

ROCK DRILLS

Designed with speed and hole-cleaning capacity for fast rock-drilling applications. Easily adjustable 3-speed throttles with reversible pawls. Drill 2½" dia. holes up to 6-ft. deep.

AIR BACKFILL TAMPER

Ideal for backfilling around foundations and other tight areas. Dual-action sand wiper keeps dirt out of the barrel. Tamper includes built-in lubricator and muffler. Also has ⅞" tapered rod, plated piston, and standard 5¾" round malleable butt.

Tool Retractors

ADJUSTABLE TOOL RETRACTORS

Include adjustable cable stop and lower safety hook.

Hubbell BD Series—Rugged ABS plastic construction with spring tension adjustment and push-button tension release.

Hubbell BG Series—Steel construction with a black polyester baked finish. Available in both ratcheted and constant pull configurations.

INDUSTRIAL TOOL RETRACTORS

Speedaire®—Rugged steel construction; permanent lubrication; easily replaceable, self-contained main spring. External tension adjustment requires no special tools. Include adjustable cable stop and safety hook.

Ingersoll Rand—Rugged steel retractor has a permanently lubricated, self-contained main spring that is easily replaceable. External tension adjustment requires no tools. Nylon-coated steel aircraft cable with adjustable cable stop and safety hook.

PRODUCTION TOOL RETRACTORS

Easy cable tension adjustment, in-line alignment of hanger and tool hook, and maintenance-free design.

Speedaire—Die-cast aluminum units feature 3 suspension points.

Ingersoll Rand—Feature in-line adjustment of hanger and tool hook.

Maximum Power Heavy-Duty Air Guns

GUARDAIR

- Inlet: ¾" (F)NPT
- Max. dBA: 121

Force 5®—Venturi nozzle draws surrounding ambient air through the side ports to increase air volume at the tip for improved cleaning.Ergonomic handle helps protect trigger from abuse and wear. Dead-man trigger for safer operation. Adjustable auxiliary handle allows 2-handed operation for greater control.

Inforcer®—Designed as the "in-line" version of Force 5, the inforcer excels in heavy-duty industrial cleaning applications. Dead-man trigger can be activated with palm or finger. Adjustable auxiliary handle allow 2-handed operation for greater control. Venturi, chisel point, and quiet force nozzles, sold separately.

Syphon Spray Guns

SPEEDAIRE GUARDAIR

- ¼" (F)NPT inlet

For spraying liquids such as oil, solvents, insecticides, and coatings.

Syphon Spray Guns—Adjustable nozzle tip controls spray pattern. No. 3MNT5 has a 6-ft. PVC spray tube with brass sinker. No. 1RF86 features a 12" extension and an adjustable spray tip. Nos. 3MNT5 and 1RF86 deliver up to 16 gal./hr.

Pneumatic Oil Gun—Includes 12" extension with adjustable spray tip and a 1-qt. screw-on container.

Water Jet Cleaning Gun—Combines compressed air and liquid spray for effective cleaning; delivers up to 22 gal./hr. of nonflammable fluids, including water, detergent, or degreaser. Each include 18" extension, air inlet with ¾" garden hose liquid inlet. No. 3MNT7 also includes, water adjustment/shutoff valve, 6-ft. feed tube with brass sinker, and a ¼" industrial interchange coupler for multiple syphon options.

Pneumatic Coupling Plugs and Sockets

ARO®—ARO steel quick-connect air coupling plugs are the male end of coupling sets. Also called nipples, they're inserted into the coupling bodies (female ends). Steel is hard and resilient with a wide working temperature range.

Industrial—Connect with industrial interchange nipples. Push-to-connect sleeve, makes connect easy with one hand.

Lincoln—Interchangeable with Lincoln Long Stem couplers.

Tru-Flate-Automotive—For the automotive industry. Grip-ring sleeve version has a knurled diameter, providing easy operation when gloves are worn.

Universal—Permits multiple series nipples to mate with one coupler. Universal Interchange fits Automotive, ARO® and Industrial Interchange plugs.

General Duty Hose Reels

REELCRAFT SPEEDAIRE

- Permanently lubricated bearings
- Vibration-free, self-locking latch
- Corrosion-resistant, powder-coated finish
- Hose included

Locking Latch—Traditional latches require the hose to be pulled out until ratchet/latch "clicks" so reel can hold position.

Reelcraft® Quiet Latch—Quiet latch are designed for reliable quiet operation. Just pull hose out to desired length, then allow hose to rewind on reel a half turn for latch engagement. Ideal for noisy environments. RT series are considered hybrid and feature a lighter, spring-driven hose reel with composite spool designed for applications that are less demanding.

Speedaire®—Hose locks in place for additional safety.

REELCRAFT SPEEDAIRE COXREELS

Dual-Pedestal Heavy-Duty Hose Reels

- Permanently lubricated precision bearings
- Chip-resistant, powder-coated finish

Coxreels® models feature multiposition guide arm, lock ratchet, and an enclosed cartridge-style motor. Super Hub™ provides triple axle support. Made of steel with solid brass full-flow swivel, nitrile seals, and CNC spun and ribbed discs with rolled edges. External fluid path for easy maintenance and for fast hose installation. EZ-Coil® feature provides controlled hose retraction that reduces the rewind speed by as much as 80% over conventional hose reels. Compact Reelcraft® and Speedaire® reels feature an antilatch. Guide arm design is structurally reinforced. Mount to floor, wall, ceiling, workbench, or inside truck. Hoses included.

General-Duty Bench/Compact Hose Reels

- Self-lubricating bronze bearings
- External fluid path for easy maintenance
- Chip-resistant, powder-coated finish

CoxComposite™ grommet with continuous radius design does not pinch or catch the hose during operation; ratchet hub secures hose to desired length. Use with air and water. Heavy-duty steel with solid brass full-flow swivel, nitrile seals, and CNC spun discs with rolled edges.

No. 29RA17

Auto-Retractable Stainless Steel Reels

- Permanently lubricated bearings

304L-grade stainless steel reels are for use in corrosive environments or food preparation areas. Suitable for chemical transfer, caustic wash down, solvent handling, and marine applications where salt spray is harsh. Both stainless steel and powder-coated finishes have stainless steel fluid path.

Speedaire®—Includes spring-driven, positive locking mechanism and safety lock. Features a multiposition ratchet lock and easy tension adjustment.

Reelcraft®—Most models feature a stainless steel frame, and all have a stainless steel fluid path. Heavy-duty brackets eliminate bending. Reels come with banded drive spring and Viton® seals.

Coxreels®—Spring-driven reels have an external fluid path with a full-flow stainless steel swivel and nontoxic food-grade nitrile grease seals.

Heavy-Duty Mobile Base Reels

- Aflas® seals
- Permanently lubricated bearings
- Vibrationproof, self-locking latch
- Corrosion-resistant powder-coated finish
- Hose included

Legacy—Features a die-cast aluminum base, multiposition guide arm, and durable Flexzilla® hose.

Reelcraft® Series SD10000—Oversized cast aluminum latch and ratchet combined with a stainless steel latch spring helps extend the service life. Feature high quality external drive spring and a heavy gauge all-bolted together frame. Guide arms are field-adjustable. Compact, high quality reel in its class, making it ideal for mounting in areas where space is limited. Stainless steel fluid paths offer corrosion resistance against various fluids.

Reelcraft® Series D9000—Large mounting base increases stability for use in abusive environments and in unstable applications, such as on service trucks. Bottom wind provides convenient hose access. Stainless steel fluid paths offer corrosion resistance against various fluids.

SPEEDAIRE
COXREELS

Combination Reels

- Heavy Duty
- Max. temp.: 150°F
- Max. pressure: 300 psi
- Permanently lubricated precision bearings
- Chip-resistant, powder-coated finish
- Multi-position locking mechanism secures hose/cord at desired length

Spring-driven dual reels provide dedicated, individual control of 2 separate hoses or hose/cord in a single assembly. Feature enclosed cartridge-style spring motor, full-flow brass swivel, and nitrile seals. A single, expanded mounting base provides excellent stability. All-steel construction with rolled edges and ribbed discs for safety, strength, and durability.

® REELCRAFT COXREELS

Fuel Delivery Reels

- Permanently lubricated bearings
- Vibrationproof, self-locking latch

Compact design. Metal forms for high strength. Use for both mobile and permanent-mount applications. Reelcraft models help protect the hose by connecting to the goose neck within the spool, reducing the potential for fuel leaks.

Note: Grounding reel is recommended for all fuel applications.

Dual Hydraulic Reels

®REELCRAFT

- Permanently lubricated bearings
- Vibrationproof, self-locking latch
- Corrosion-resistant powder-coated finish
- Hose included

Compact, dual hydraulic reels are capable of handling a twin hose. Mount easily to floors, walls, ceilings, benches, or inside trucks. No. 4NB31 has Buna N seals; Nos. 4NB32 and 4NB33 have Aflas® seals. Can be used to operate hydraulic cylinders or tools, as well as for pneumatic applications.

Enclosed Reels

SPEEDAIRE® ®REELCRAFT COXREELS®

- Permanently lubricated bearings
- Vibrationproof, self-locking latch
- Corrosion-resistant powder-coated finish

Enclosures offer a clean look and environmental protection for hoses. Reels can be adjusted to allow hose to come off the top or side.

Speedaire® Series—Spring-driven, with positive latching mechanism.

Reelcraft®—Low-Pressure Air/Water Series—Tough, lightweight polypropylene resists many acids and alkalis. Protect hose while allowing both hose and reel to be easily cleaned. Lightweight reels come with convenient handle.

Steel Housing—Heavy steel cover offers complete protection of the hose, formed and robotically welded base for trouble free service.

Coxreels® Series—CNC spun and ribbed discs with rolled edges for added strength and safety. No. 29PY57 features the Ez-Coil® controlled hose retraction system. Nos. 29PY04 and 33N085 feature the Super Hub™ dual axle support system that helps strengthen reel structure and reduce vibration.

Motor Driven Hose Reels

®REELCRAFT COXREELS®

- Hose not included

Ideal for stationary and mobile applications. Adjustable drag eliminates backlash. The chain and sprocket are partially shrouded for added protection.

Coxreels®—All-welded 1-pc. steel A-frame construction features a low-profile outlet riser and open drum slot design for smooth, even hose wraps. Reliable direct gear drive provides quiet and smooth retraction. Include permanently lubricated self-aligning pillow block bearings for smooth and trouble-free rotation. Stainless Steel reels offer non-corrosive performance in food/chemical processing, and off-shore/marine applications.

Reelcraft®—Detaching of the goose neck allows for easy installation and provides extended service of hose.

Hand-Crank Hose Reels

SPEEDAIRE ® REELCRAFT COXREELS

Ideal for stationary and mobile applications. Adjustable drag eliminates backlash.

General Duty—These reels have a simple design and steel housing frame. Ideal for industrial applications.

Heavy-Duty—COXREELS®—All-welded, 1-pc. steel A-frame construction features a low-profile outlet riser and open drum slot design for smooth, even hose wraps. Include a long-handled lockpin and adjustable friction brake assembly to lock or brake the drum from rotation. Stainless Steel reels offer non-corrosive performance in food/chemical processing, and off-shore/marine applications.

- **Self-aligning, permanently lubricated pillow block bearings for smooth rotation**

Heavy-Duty—REELCRAFT®—1-pc., bolted A-frame steel construction features nickel-plated full-flow swivels with Aflas O-ring seals and vibrationproof fasteners. Detachment of goose neck allows for easy installation and service of hose. Convenient T-handle locks spool in place when not in use.

Industrial Portable Hose Hand Crank Reels

COXREELS

- 1-pc., 1" steel tubular frame
- Chip-resistant, power-coated finish
- Direct hand crank rewind
- Hose not included

Adjustable tension brake helps prevent "free-wheeling." Nitrile seals. External swivel path with brass 90º full-flow NPT swivel inlet.

Caddy Mount—Base has predrilled holes to ease installation.

Dolly Mount—Feature 8" tires, rubber front feet, and removable handle.

GA GRAINGER APPROVED

Hose Barbs, Menders, Ferrules, Crimper and Die Modules

Provide fast, easy hookup for bulk hose pipe thread fittings.

BEADED HOSE BARBS

Flat area between the barb and the body fitting allows the greatest area possible for clamping.

HOSE MENDERS

Connect on any 2 hoses or a broken hose that meets dimensional specifications.

BRASS HOSE FERRULES

Long-barrel ferrules crimp air hose to barb to form a permanent assembly.

HOSE CRIMPER

Portable or workbench-mounted crimper secures standard brass ferrules onto general purpose or heavy-duty air, water, and material hose for a complete hose assembly. Includes 5 die sets.

DIE MODULES

Hardened steel ribbed die sets can be used for crimping ¼" single-braid through ⅜" double-braid compressed air line hose or standard air line cables.

Universal Couplings

- Constructed of malleable iron
- Same gasket, safety clip, and lanyard for all coupling sizes, except self locking couplings use gasket No. 36LH62
- Gasket temp. range: -20° to 160°F

A sexless common head design eliminates mismatched fitting and allows direct locking connection between any 2 fittings from ¼" to 1". Nos. 6YZH1 to 6YZH4 do not require a pin.

Note: Do not use coupling for steam service. Rated for air service only, up to 110 psi.

OETIKER®

Crimp Clamps

2-EAR HOSE CLAMPS

1-pc. design provides positive clamping action and tamperproof seal.

STEPLESS® EAR CLAMPS—STAINLESS STEEL

Guarantee a 360° seal using an innovative tongue-in-groove design that leaves no steps, gaps, or unbridged parts on the inner circumference. Spring action lets clamp "breathe" without loosening; no need to retighten.

WELDING HOSE REPAIR KIT

For quick repairs to oxygen/acetylene welding lines. Includes standard jaw pincers; 40 of 9/16" 2-ear clamps; 10 of 1/2" 2-ear clamps; 6 each: 1/4" brass nipples, acetylene B left-hand brass nuts, and oxygen B right-hand brass nuts; 4 each: 9/16" twin clamps and 1/4" hose menders; and 2 each: 3/16" brass nipples and 3/16" brass hose menders.

2-EAR HOSE CLAMP KIT

Plastic case contains standard jaw pincers; 15 each: 5/16", 3/8", 1/2", 9/16", and 5/8" clamps; and 12 each: 3/4", 7/8", 15/16", and 1" clamps.

STEPLESS® EAR CLAMP KIT

Plastic case contains standard jaw pincers and 10 each of 1-ear clamp sizes: 1/2", 9/16", 5/8", 23/32", 7/8", 1", 1 1/8", and 1 1/4".

JAW PINCERS

Used to close ear clamps. Made of forged steel.

BAND-IT®
Stainless Steel Cable Ties

- 0.026" thick
- Nylon 11-coated stainless steel
- Tensile strength: 100 psi

Self-locking, reusable ties can be applied by hand.

BAND-IT®
Banding and Clamping Tools

BAND CLAMP TOOLS
Designed for installation of band clamps and preformed clamps.

BAND TENSIONING RATCHET TOOL
For fast tensioning of band and buckle systems. Suitable for 3/16" to ¾" banding.

CENTER PUNCH TOOLS
Apply tension to the clamp, then cut off the clamp tail after locking.

HOSE CRIMPER ADAPTER KIT
For use with hand and pneumatic tools when installing Band-it® center-punch or junior-style clamps. Suitable for ⅜" to ⅝" banding.

KIT CUTTER BLADE BACK
For use with hand and pneumatic tools when installing BAND-IT® center-punch or junior-style clamps.

No. 5DLJ1

Stainless Steel-Body Air Cylinders SPEEDAIRE®

- Max. operating pressure: 250 psi (17.23 bar)
- Operating temp. range: -10° to 165°F

Can tolerate moisture and many types of lubricants and solvents. For use where magnetic sensing piston is not required. Interchangeable with Bimba, Parker, SMC, Norgren, and other major manufacturers' cylinders.

Note: 6"-stroke models also available on Grainger.com®.

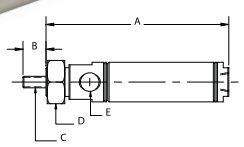
SPEEDAIRE



Double-Acting Stainless Steel Body Air Cylinders

- Operating pressure range: 8 to 250 psi
- Operating temp. range: 40° to 140°F
- Include magnetic piston for use with autoswitches

Permanently lubricated, nonrepairable cylinders are dimensionally interchangeable with a variety of manufacturers' cylinders. Stainless steel tube and chrome-plated carbon steel piston rod improve corrosion resistance. Piston magnet allows autoswitches to sense stroke piston. NPT ports. Additional sizes, switches, and brackets available on Grainger.com®.

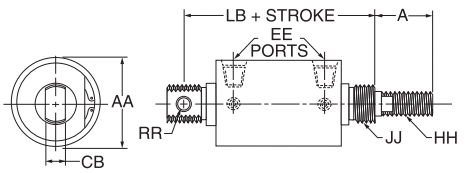
SPEEDAIRE



Repairable Round-Body Aluminum Air Cylinders

- Double-acting
- Max. operating pressure: 150 psi (10 bar)
- Operating temp. range: -10° to 165°F

Corrosion- and abrasion-resistant hard anodized aluminum cylinders have a high-strength steel retaining ring that is easily removed for maintenance and repair. Chrome-plated steel rod. Head and caps are sealed with an O-ring static tube seal to prevent leaks. All cylinders come "switch ready".

No. D8463

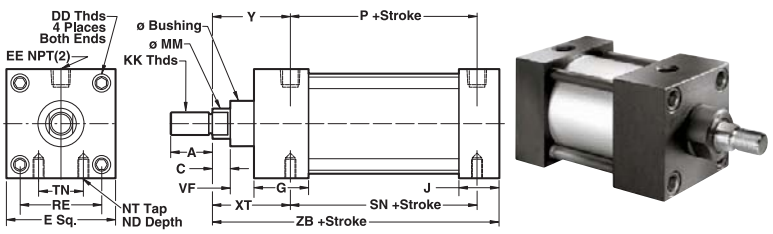
SPEEDAIRE®

NFPA Square-Head Tie Rod Aluminum Cylinders

- Max. operating pressure: 150 psi (¾" and 1⅛" bores), 250 psi (1½" to 6" bores)
- Temp. range: -20° to 200°F
- Include magnetic piston (except ¾" and 1⅛" bore dia. have non-magnetic piston)



Switch-ready magnetic piston cylinders have a replaceable rod gland and fully adjustable cushion to allow a full range of NFPA MS4 interchangeable mounting configurations. 4 internal-threaded sleeve nuts recessed in the head and 4 tapped holes in the cap permit direct mounting. ¾" and 1⅛" bores are noncushioned and nonmagnetic. Additional NFPA cylinders available on Grainger.com®.

NFPA Square-Head Tie Rod Steel Cylinders

- Max. operating pressure: 250 psi
- Temp. range: -20° to 200°F

These cylinders offer full range of NFPA interchangeable mounting configurations. Cushioned cylinders have a fully adjustable cushion.

SPEEDAIRE

NFPA Extruded Aluminum Air Cylinders

- Max. operating pressure: 250 psi
- Operating temp. range: -10° to 165°F
- Switch ready
- Cushions: standard and adjustable at both ends on 7" and larger stroke lengths

Feature industry-standard footprint, which allows interchangeability with other NFPA-style cylinders of either tie-rod or extruded construction. Advantages include clean appearance and fewer spaces for dirt and debris to collect.

SPEEDAIRE

NFPA Square-Head Twin-Rod Air Cylinders

- Bottom-tapped (MS4) mounting holes, standard
- Max. operating pressure: 250 psi, except 1⅛" bore are 150 psi
- Temp. range: -20° to 200°F

Permanently lubricated, heavy-duty, double-acting air cylinders for applications requiring guided movement when it is critical that the piston rod not rotate. 2 piston rods prevent rods from twisting and turning off the axis, for reliable, repeatable linear motion with no need for external guides. Cylinder bearing wear is also minimized by the nonrotating twin-rod design. High-tensile strength aluminum cylinders have chrome-plated polished steel piston rods, high-strength steel tie rods, cast-iron rod bearings, and U-cup piston cylinders.

Noncushioned
No. D8314

Hold-Down Pneumatic Clamps

DESTACO

For use in welding, woodworking (cutting and gluing), drilling, tapping, reaming, and assembly applications. Can be used on automated systems. Toggle-action clamps remain in locked position if air pressure is accidentally lost or hoses are disconnected. Most models are sensor-ready with provisions for mounting sensors (usually grooves) included. Enclosed clamps are designed for dirty environments where contamination can be a problem. For mechanical hold-down clamps, see pages 2319 and 2320.

L Series and PA55 Pilot and Manual Air Control Valves

- Max. operating pressure: 150 psi

Pilot—High flow 4-way valves are for use in any control circuit where air pilot signals are available. Require no electrical power to drive the valve, making them suitable for use in hazardous locations.

Manual—Lever-operated valves provide high flow; balanced spool-and-sleeve design provides easy operation, regardless of system pressure. Valves operate with lubricated or nonlubricated compressed air and are easily plumbed into the system.

numatics

Mark 55 Series Solenoid Valves, Subbase/ Manifolds, Pressure Regulators, and Accessories

Valves—Actuate by either a direct solenoid operator or solenoid pilot.
- 5.5 Cv
- Operating pressure range: full vacuum to 150 psi

Manifolds—Each manifold assembly requires 1 end plate kit (sold separately) to provide the supply and exhaust porting. Hardware for mounting valves to manifold, as well as electrical plugs for the valve to plug into the manifold base, are included.

Pressure Regulators and Speed Control Kit for Mark 55 Series—Include a plug receptacle assembly that helps reduce cost. Speed Control Kit No. 3JCF4 adjusts the metering of exhaust air to control cylinder speed.
- Regulators include gauge, with 1/8" NPT port

B Series Solenoid Air Control Valves, Coil Kits, and Accessories

Parker

- Max. operating pressure (valves only): 145 psi
- Min. operating pressure (valves only): 20 psi (B3, B5, and B6 series); 35 psi (B7 and B8 series)
- Max. temp. range (valves only): 5° to 120°F

Valves have a low-friction breakaway for fast response time. Low wear assures long service life.

No. 3FDT6

3- and 4-Way Manual Air Control Valves

DIRECTAIR SERIES

▪ Max. temp. range: 32° to 175°F

Compact design for manual or mechanical operation. Feature fluorocarbon seals and a stainless steel spool for greater chemical compatibility and the ability to withstand higher temperatures.

DirectAir 2 Series operators include roller, lever, push button, plunger, and 1-way tripper spool and poppet type valves. Features space-saving mounting to provide cylinder positioning feedback.

DirectAir 4 series operators include roller, lever, button, petal, and treadle foot operated valves.

M0 SERIES

▪ Max. temp. range: -15° to 200°F

Corrosion-resistant construction with bronze body and stainless steel spool allows valves to be used in either air or low-pressure oil applications. Closed crossover spool design minimizes compressed air waste as the valve shifts, for energy-efficient operation.

VIKING SERIES

▪ Max. temp. range: -40° to 158°F

Inline valves with lever operators are suitable for outdoor and transportation applications. Valves feature high flows, and dusttight and watertight construction.

42 SERIES

▪ Max. temp. range: 0° to 140°F

Compact inline valves are specifically made for applications that require very high flows.

Pilot-Operated Air Valves

- Temp. range: 0° to 200°F (N Series); 5° to 120°F (B Series)

Feature external pilot, wide range of flow, and low-friction breakaway. Can be run unlubricated.

No. 3FEM9

Sleeve, Shuttle, Quick Exhaust, Miniature, and Heavy-Duty Valves

- Temp. range: 32° to 160°F

Sleeve Valves—Inline valves allow 1-handed exhausting of compressed air lines using On/Off control. When exhaust ports are closed, the air line opens to actuate the air device. Sliding the sleeve in the opposite direction opens exhaust ports and shuts off the air supply.

Shuttle Valves—Connect 2 different inputs so that only 1 output is on at a time. 10 psi min. required to effect shuttle change.

Quick Exhaust Valves—Increase cylinder speed by providing quick release of exhausting air.

Miniature Air Pilot Directional Valve—Compact mini valve can be operated remotely using an air pilot signal. Shifts back to original position when signal is removed.

Miniature Manual and Mechanical Valves, Heavy Duty Composite Limit Valves, and Actuating Arms—Valves can be plumbed as normally passing, nonpassing, or multipurpose. 3-way, 2-position.

3- and 4-Way Manual, Pilot, and Mechanical Light-Duty Circuitry Valves

- Max. operating pressure: 150 psi
- Temp. range: 32° to 160°F

Light-duty actuating directional control valves power devices such as cylinders, slides, or gates. Compact body is aluminum bar construction, providing light weight. ⅛" and ¼" port valves. Choose from toggle, push-button, palm-button, turn selector, and roller mechanical actuators.

Miniature Direct-Acting Solenoid Valves and Coils

ARO®

Valves—Suitable for air or inert gas. 3-way, 2-position electric-to-air interface valves are solenoid-actuated with spring return and have sufficient flow for cylinders 1" dia. and smaller. Low-watt models draw 0.94W.

- Max. operating pressure: 150 psi, except 115 psi for Low-Watt coils
- Max. temp. range: 0° to 122°F

Coils and Connectors—Total coil rating is 311°F, which includes heat rise. AC or DC coils can be interchanged on same solenoid stem. 1 connector required for each coil.

- Max. temp. range: 0° to 122°F
- 100% duty cycle

Hazardous Location Solenoid Coils—Coils fit on the same 22mm armature assembly used by Alpha-, MaxAir-, CAT-, H-, and K-series ARO brand valves available on this page and pages 2550 to 2551. For use in areas where air contains combustible dust or chemical fumes.

- Max. temp. range: 0° to 311°F
- 100% duty cycle coil insulation type

No. 4HN48

Note: Coils sold separately on this page.

Manifold Solenoid Valves

- Operating pressure range: 50 to 150 psi
- Temp. range: 0° to 180°F
- 1.2 Cv
- Up to 600 cycles/min.
- Uses 22mm coils

Offer easy valve removal and replacement. Can be used with vacuum with external pilot supply.

Note: When operating below 50 psi, Low-Pressure Kit No. 4HN96 must be used.

Note: Coils and connectors available separately, this page.

Body-Ported High-Flow Solenoid Valves

ARO

- Max. temp. range: -10° to 180°F
- 100% duty cycle
- Uses 22mm coils

Prelubed units can operate without air line lubrication. 1 connector required for each coil; each is its own junction box with molded connectors and gaskets to protect electrical connections. Total coil rating is 211°F which includes heat rise. 4-way K-series valves have solenoid override for easy means of setting up and troubleshooting circuits without power to the solenoids.

Note: 22mm coils and connectors available separately, see page 2549.

Assembled Valves with End Plate Kit

Compact Stacking Solenoid and Pilot Valves

ARO

- Operating pressure range: 50 to 150 psi
- Temp. range: 0° to 180°F
- Uses 22mm coils

High flow capacity. Bonded and precision ground urethane-to-aluminum spool for wear resistance. Prelubed; can be operated without air line lubrication. Each stack of valves requires a stacking end plate kit No. 2G599, sold separately.

Note: When operating below 50 psi, Low Pressure Kit No. 4HN96 must be used.

Note: 1 connector required for each coil. Coils and connectors sold on page 2549.

Check and Needle Valves

ARO

- Max. operating pressure: 200 psi
- Operating temp. range: 0° to 200°F

Corrosion-resistant valve bodies are made of lightweight composite material. Threaded for panel mount. Lock rings secure set flow rate. Feature calibrated adjustment knob, 4-stage needle, color-coded micrometer, and zinc-plated pipe port inserts.

Check—Use to check or direct air in 1 direction.

Needle—Increase or decrease airflow in both directions, then set with red lock ring.

ALPHA® ARO®

Compact Body-Ported Solenoid and Pilot Valves

- Operating pressure range: 50 to 150 psi on 2-position valves; 60 to 150 psi on 3-position valves
- Temp. range: 0° to 180°F
- Up to 600 cycles per minute
- Vacuum rated to 29 in./Hg (requires kit No. 4HN96, sold separately on page 2549)
- Uses 22mm coils

Body-ported Alpha® valves are compact 5-ported valves. Can operate without air line lubrication. For use with air or inert gas.

Note: When operating below 50 psi, Low Pressure Kit No. 4HN96, sold on page 2549, must be used.

Note: 1 NEMA 4 connector required for each coil. Coil connectors and replacement coils are sold separately on page 2549.

2-Hand Anti-Tie-Down Controls

No. 4HN74

- Operating pressure: 50 to 125 psi

Note: These units provide only anti-tie-down logic function and not stroke-limiting devices. On machines with full revolution clutches and/or where repeat cycles can occur, approved safety and/or single-stroke devices must be used along with the anti-tie-down units.

Unassembled—Includes anti-tie-down control block, two 2¼"-dia. push-button valves, 10 ft. of 5⁄32" tubing, and fittings. Order pilot valve No. 2F973, sold on page 2551.

Assembled—Includes all internal connections ready to install. 2¼"-dia. valves. External supply and output to machine made by 5⁄32" (4mm) instant tube fittings. Do not use on any revolutionary press.

Speed, Flow, and In-Line Control Valves with Adjustable 1-Touch Fittings

- Pressure range: 15 to 145 psi
- Temp. range: 23° to 140°F
- Polybutylene body

Preapplied sealant and top-mounted hex nut/adjustment screw allows fast assembly and easy adjustment with a flat screwdriver. Use with nylon, soft nylon, and polyurethane tubing. Stainless steel models have a stainless steel stem, and can be used in washdown and clean-room applications. In-line valves include a hexagonal lock nut and retainer that prevents accidental needle loss. Elbows feature metered, 1-direction flow control.

Speed Exhaust Control Valves with 1-Touch Fittings

- Pressure range: 15 to 145 psi
- Temp. range: 23° to 140°F

Integrated quick exhaust valve and exhaust restrictor allow for high-speed cylinder operation. Design helps to remove moisture build-up at the actuator port. Nickel-plated brass construction.

legris

Function Fittings

- Metric valves have BSPP threads

Compact push-to-connect flow valves help ensure excellent performance of flow and are perfectly suited for reduced spaces. Nylon and nickel-plated brass construction, except where noted. Polypropylene push button and Buna nitrile elastomer seals for leak-free connections. For use with polyurethane, polyethylene, or PTFE tubing.

FLOW CONTROLS

Compact
- Pressure range: 14.5 to 145 psi
- Temp. range: 32° to 158°F

Adjustment screw controls airflow, while locking nut protects the flow setting from being changed due to tampering or vibration.

Swivel
- Pressure range: 14.5 to 145 psi
- Temp. range: 32° to 158°F

Allow access to vertical or angled tubing in restrictive installations.

In-Line
- Pressure range: 14.5 to 145 psi
- Temp. range: 32° to 158°F

Unidirectional airflow allows air to flow freely in through the flow control; metered out through the adjustment screw.

Miniature
- Pressure range: 14.5 to 145 psi
- Temp. range: 30° to 158°F

Specially designed for use with small-bore cylinders in very small pneumatic applications.

LOCKOUT VALVES
- Pressure range: 14.5 to 145 psi
- Temp. range: -4° to 160°F

Mount on a cylinder to cut off both supply and exhaust. Designed for maximum flow capacity in the open position. Brass material.

MINI BALL VALVES
- Max. range: 145 psi
- Temp. range: -4° to 176°F

Enable in-line pneumatic circuit opening and closing.

PILOTED NONRETURN VALVES
- Pressure range: 14.5 to 145 psi
- Temp. range: 23° to 140°F

Help protect equipment by blocking cylinder movement in a vertical or horizontal position. Valves allow the cylinder to stop in mid-stroke.

PNEUMATIC THRESHOLD SENSORS
- Pressure range: 43.5 to 116 psi
- Back pressure: 0.85 psi to 1 Bar
- Temp. range: 5° to 140°F

Detect the absence of pressure and translate it to a pneumatic output which emits a signal to pilot the next step. Sensors are compact and can be mounted on a cylinder or control valve on any pneumatic equipment to control the operation of the cylinder.

METER IN CHECK VALVES
- Pressure range: 14.5 to 145 psi
- Temp. range: 32° to 158°F

Valves are compact, lightweight, and allow air to pass in 1 direction while blocking air flow in the other. 7 psi will overcome the spring pressure.

QUICK EXHAUST VALVES
- Pressure range: 10 to 150 psi
- Temp. range: 0° to 160°F

Help increase system efficiency and the cylinder speed by purging cylinder exhaust air at the cylinder port instead of at the control valve.

Brass and Polybutylene 1-Touch Fittings

- Operating pressure range: -15 (vacuum) to 145 psi
- Temp. range: 23° to 140°F

Low disconnecting force helps prevent collet and chuck from biting into and damaging tubing. Polybutylene/brass body and threaded portion can turn independently of one another for use in confined spaces. Use with polyurethane, polyolefin, nylon, and PTFE tubing. Can be used for positive air pressure as well as vacuum for actuators, air preparation, and directional control valves.

ALPHA FITTINGS & ACCESSORIES

Swift-Fit Universal Flow Controls

- Max. pressure: 190 psi (fittings)
- Temp. range: 0° to 200°F

Male threads on PTC fittings are compatible with both inch and metric female thread systems. Will not strip threads on either the fitting or the component. Built-in reusable Buna thread seal for quick, low-profile installation.

Glass-Filled Nylon Push-To-Connect Fittings

- Max. pressure: 290 psi
- Temp. range: -4° to 175°F
- Pkg. qty.: 10, unless otherwise noted

Stainless steel gripping ring allows you to create a secure, leak-free connection without tools; disconnects easily with the plastic release button. All threaded elbows, tees, and Y's swivel around the threaded, nickel-plated base for easy installation. Fitting bodies are a composite material—nylon and nickel-plated brass. Thread sealant is preapplied to all tapered threads. Buna N elastomer seals. Can be used with all pneumatic machines, as well as for food-processing, packaging equipment, textile machinery, robotics, and semiconductor applications. Use with semirigid nylon, flexible polyurethane, polyethylene, and PTFE tubing.

10-32 UNF threads include O-ring seal.

Swift-Fit Universal Nickel-Plated Brass Push-To-Connect Fittings

- Max. pressure: 290 psi
- Temp. range: 0° to 200°F
- ⅛" to ⅜" and 3mm to 8mm fittings sold in pkg. of 5
- ½" and 10mm to 14mm fittings sold in pkg. of 3

Feature universal threads that are compatible with NPT, BSPP, BSPT, ISO 7, ISO 228, G, and J style female pipe threads. The fitting design allows you to carry only 1 thread style and helps you avoid wasting time trying to identify the thread pitch of each fitting before connecting to tubing. Buna thread seal and innovative internal lip seal helps eliminate leaks; no need to use PTFE tape or thread sealants. Fittings can be used with copper, nylon, polyethylene, and polyurethane tubing and are suitable for use in pneumatics, robotics, and water applications.

DEWALT SPEEDAIRE THOMAS by Gardner Denver ROLAIR PORTER CABLE

Portable 115VAC Electric Oil-Free Air Compressors

Speedaire®—No. 25F538 has steel hotdog tank, enclosed pressure gauges, regulator knob, and rubber feet for added stability on uneven surfaces. No. 1NNE7 has 2 pressure gauges, 2 quick connects, built-in control panel with regulator, and induction motor.

Rolair—Intake filter/silencer helps compressor operate at a quiet 60dB. Motor and pump are fully enclosed by a roll cage, for use in rugged environments. On-the-job life expectancy of approximately 2000 hr.

Thomas—Starts at 100 psi. 38-sec. recovery time.

DeWalt®—Has a roll cage, 2 gauges, and a factory-installed coupler.

Porter Cable®—No. 1VAN5 has 2 couplers. Motor starts easily in cold weather; upgraded shroud has rugged carry handle.

SPEEDAIRE ROLAIR makita Jenny AIR COMPRESSOR DEWALT

Portable Electric Oil-Lubricated Air Compressors

Speedaire®—No. 11X355 has a cast-iron cylinder, heavy-duty roll bar, and vibration-absorbing rubber feet. No. 2MLW5 has an aluminum-head cylinder with cast-iron sleeve.

Rolair—Contractor-grade professional units have cast-iron cylinders and low amp-draw motors. Nos. 26JY35 and 26JY36 feature an easily maneuvered dolly cart design and a user-friendly control panel. No. 26JY35 also has a tool box for convenient storage.

Jenny—Unit features a heavy-duty steel tank and frame mounted on antivibration feet. Comes standard with cast-iron cylinder soft-start direct-drive pump, with safety valves, pressure regulator, and gauges.

Makita®—Durable low-noise compressors feature pumps with oil-lubricated cast-iron cylinders and big-bore pistons; provide outstanding performance and fast recovery time.

DeWalt®—Have a side-stack tank design, cast-iron cylinder, dual soft-start valves, and ball drain. No. 1VAN9 is wheeled.

Vehicle Mounted Air Compressor Accessory Kit	GAV	**3MMC1**

Portable Electric Barrel Air Compressors

Feature ASME code tank, pressure regulator, and 2 pressure gauges.

Speedaire®—No 40CF16 features 225 psi to help increase tool run time. Includes a tank safety valve and quick connect release for attaching/removing air hose. No. 1NNF6 feature 2-cylinder cast-iron pumps with belt-drive design.

DeWalt®—Efficient high-Pressure (EHP) pump features ball drain valve and air hose storage. Low noise at 78dBA per ISO3744.

Rolair—Induction motor design with a cast-iron cylinder. Include foam-filled tires, coupler(s), and regulator.

Gas Engine-Powered Air Compressor/Generators

- **2-Stage (except No. 4NB86 is 1-stage)**

Use Compressor Oil No. 4ZF21, sold separately on page 2568, and Engine Oil No. 1UBX8, sold separately. Honda engines have low-oil shutdown.

Wheelbarrow Portable—Produce up to 3500W (except No. 4NB86 is 1600W) with compressor off-load. Splash-lubricated compressor has cast-iron cylinders. Generator includes one 120V, 15A duplex receptacle and one 230V, 20A receptacle (No. 4NB86 only has one 120V, 15A duplex receptacle).

Stationary—Cast-iron pumps are oil splash-lubricated. Combine 2-stage air compressor with 120V generator rated at 3500W with compressor off-load. Generator includes one 120V, 15A duplex receptacle and one 230V, 20A receptacle. Nos. 6EWK4 and 6EWK6 do not include battery and cables. 3.8-hr. full load run time.

Compressor/Generator/Welders

Combine 3 separate machines in 1 unit. 2-stage air compressor is rugged cast-iron construction. Stainless steel braided discharge hose with regulator and 2 gauges for tank and outlet pressure. Generator has 120V alternator with 4500W-rated AC output (rating is offload for No. 487J39; continuous for No. 39GC06). Generator includes two 120V, 20A duplex receptacles and one 120V/240V, 20A twist-lock receptacle. Arc welder features amperage selector switch with 50A to 170A for No. 487J39, and 220A for No. 39GC06 DC voltage working range. Subaru EX 420cc OHV engine for No. 487J39 and Honda V-Twin 688cc engine for No. 39GC06, both with electric start. Battery and cables not included.

Stationary Gas Engine-Powered Air Compressors

SPEEDAIRE®

Models feature heavy-duty, 100% cast-iron, continuous-duty air compressor pump. Pneumatic idle control conserves fuel and extends the life of the pump. Tanks include tank drain, pressure gauge, and safety valves.

No. 40JL42—Has easy recoil engine with low oil shut-down.

No. 4NB85—Pneumatic idle control conserves fuel and features low-oil alert protection. Includes regulator and 2 gauges.

Nos. 5F564, 4LW38, and 6EWK7—Feature low oil shut-down, 12V alternators, and recoil start option. No. 6EWK7 also includes regulator, outlet pressure gauge, and a flexible stainless steel braided exhaust tube.

INGERSOLL RAND

Heavy-duty, 100% cast-iron, continuous-duty compressors. Corrosion-resistant powder-coated paint finish.

CHICAGO PNEUMATIC

These service truck compressors feature heavy-duty, cast-iron pumps and include oil and filters. Full 2-yr. manufacturer's warranty on compressor and engine including valves.

NO. 4KP97

Battery Tray Kit mounts to Nos. 5F564 and 4LW38 and includes steel tray, attachment hardware, battery cables, and all-weather battery cover with hold-down clamp (battery not included).

Fire Sprinkler Air Compressors and Pumps

- 115/230V

Single stage with durable powder-coated finish.

Fire Sprinkler Air Compressors—Single-stage, splash-lubricated compressors are rugged cast-iron construction with a large flywheel for extra cooling and to ease start-up. Feature a directional air shroud to reduce pump temp., large canister intake filter with replaceable filter elements, totally enclosed heavy-duty belt guard, and an open dripproof motor with thermal overload protection.

- Max. pressure: 40 psi

Air Compressor Pumps—Cast-iron pumps have stainless steel valves and use synthetic oil for longer life. No. 35KV12 has head unloaders.

- Max. pressure: 150 psi

SPEEDAIRE

Climate Control Air Compressors

- 3-phase duplex units require 115V for control panel power
- Max. pressure: 90 psi
- Simplex: 70 psi On/90 psi Off
- Duplex: 70 psi On/90 psi Off (lead), 60 psi On/80 psi Off (lag)
- All compressors must be hardwired
- Horizontal tank with ¾" (F)NPT outlet and brass ball valves

Deliver published cfm at stated rpm and pressure and to be below 2 ppm in oil carryover. Use for new, replacement, or upgrade HVAC installations and instrument air applications. Simplex packages include mounted and wired magnetic starter (except 1-phase); duplex packages include mounted and wired alternator and 2 magnetic starters. For duplex models, use twice the oil capacity (Compressor Oil No. 4ZF21 is recommended, sold separately on page 2568).

Mobile Engine-Driven Air Compressors and Compressor/Generator

VANAIR MOBILE POWER SOLUTIONS

Rotary screw-type with electric start. Include a lifetime manufacturer's warranty on the compressor and are Tier 4 compliant.

Viper Air Compressors—Can easily power a 90-lb. jackhammer and include a 12V cold weather protection kit. Diesel models feature an automatic variable throttle control to help reduce fuel consumption.

Viper Air Compressor/Generator—Features multi-functioning capabilities and provides air and AC power in 1 portable unit. Can run at full load for up to 4 hr. and is easy to transport via fork lift or pallet truck.

PowerFlex™ Air Compressor/Generator—Diesel-powered model provides air and AC power in one easily transportable unit. Includes a 12V cold weather protection kit.

Air N Arc® Compressor/Generator/Welder/Battery Charge System—Multifunction systems include a 12V cold weather protection kit and 25-ft. weld and boost cables. Battery boost cables are available on Grainger.com®.

SPEEDAIRE

2-Stage Duplex Air Compressors

- Low rpm for long service life
- Must be hardwired
- Fully enclosed belt guard
- Expected pump life: 15,000 hr.
- Max. pressure: 175 psi

Allow you to maximize energy efficiency by automatically alternating between 2 compressors or by operating both simultaneously. 100% duty cycle can be achieved with use of Speedaire® Synthetic-Based lubricant No. 1WG49, sold separately on page 2568.

Note: Not for use with climate controlled systems.

No. 35WC61

Ingersoll Rand

Type 30 2-Stage Air Compressors

- Expected pump life: 15,000 hr.
- 100% continuous duty
- tank with manual drain and discharge isolation valve
- Must be hardwired
- Max. pressure: 175 psi

Cast-iron compressors feature totally enclosed belt guard and splash lubrication. 5- and 7½-HP models have automatic Start/Stop control. 10-HP vertical models have automatic Start/Stop control and oil sight glass. 15-HP models have dual control for automatic Start/Stop or constant speed operation and Low Oil Guard Shutdown Switch No. 4ZJ95.

Note: Motor starter is required for Nos. 4R778 and 4R774.

FULLY PACKAGED

Compressors include air-cooled aftercooler to remove additional moisture, low oil protection switch to prevent pump from running dry, and electronic drain valve.

SPEEDAIRE

2-Stage Air Compressors

- Expected pump life: 15,000 hr., except where noted
- 100% duty cycle (with use of synthetic oil)
- Must be hardwired
- Max. pressure: 175 psi

Deliver higher pressure than 1-stage models with low RPM for long life. Feature a totally enclosed, safety-designed belt guard. All models include an oil sight glass, pressure gauge, and pressure safety valve.

FULLY PACKAGED

The included air-cooled aftercooler can remove up to 60% of moisture from compressed air. The automatic tank drain helps remove water from the tank before it gets carried into the air distribution system. Vibration isolators help reduce operating noise and vibrational stress on the tank.

SPEEDAIRE

Rotary Screw Compressors

- Max pressure: 150 psi
- 100% continuous duty
- Fully integrated air ends
- Must be hardwired

Feature 100% duty cycle, simple maintenance with easy-to-access filters, and a rugged motor and pump for long life.

Enclosed—Time delay shut down allows compressor to continue to run for a predetermined time to reduce amp spikes from motor starts.

- Decibel rating: from 68 to 74dB
- High pressure/temperature shutdowns
- Automatic tank drain included

Open Frame Horizontal—The open frame design eases maintenance and allows for a lower operating temperature to help extend life of electrical components.

- Decibel rating: from 72 to 78dB
- Manual tank drain

Open Frame Vertical—Offer the same benefits as open frame horizontal models, but require less floor space.

- Decibel rating: from 72 to 74dB
- Manual tank drain

Rotary Screw Compressors

Chicago Pneumatic

20 to 50 HP models with dryer also include 1 coalescing filter.

QRS Series—Designed for continuous-duty operation at full compressor output without affecting compressor life. The 61 to 74dB sound level allows indoor installation.

- Max. pressure: 150 psi (5 to 7.5 HP, 10 HP with 60 gal. tank); 125 psi (10 HP with 120 gal. tank, 15 to 30 HP)
- Ambient temp.: 34°F to 104°F
- Belt drive

CPC, CPD, and CPBg Series—Designed with a low sound enclosure and feature whisper quiet operation, rapid single-panel maintenance, Wye-delta, reduced voltage start, and an electronic control unit that provides energy saving operation with intelligent shutdown. The 70 to 78 dB sound level allows indoor installation. Base mount.

- Max. pressure: 125 psi
- Ambient temp. 32°F to 104°F
- Gear drive: 40, 50, and 100 HP; belt drive: 60 and 75 HP

Note: See page 2567 for Maintenance Kits.

Ingersoll Rand

Rotary Screw Compressors

Note: For Air Compressors over 50HP, go to Grainger.com® and search by "50HP Air Compressors".

R-Series Premium Tank-Mount—Feature premium-efficiency IE3 motors, sequential cooling system, and a standard microprocessor controller. PTFE stainless steel braided oil hoses, O-ring face seals, and leak-free air ends. 69dB sound level.

- Soft-starting star delta starters

UP6-Series Tank-Mount—Reliable design with dual controls and high-efficiency IE2 motors. 65 to 69dB sound level.

- Dedicated voltage ODP motors
- Full voltage starters

R-Series and UP6-Series Total Air System —Integrated compressor and dryer systems provide clean, dry air. Each horizontal tank-mounted unit includes a rotary screw compressor, refrigerated air dryer, moisture separator, coalescing and particulate filtration, receiver tank, and controls.

SPEEDAIRE | Ingersoll Rand | Chicago Pneumatic

Rotary Screw Maintenance Kits and Accessories

Additional maintenance kits and accessories available on Grainger.com®.

SPEEDAIRE®

Compressor Oil—Extends service intervals up to 4000 hr.

Maintenance Kits—Regular use of these easy-to-use kits and accessories can help maximize the life of your compressor.

INGERSOLL RAND®

Ultra Coolant—Provides 8000 hr. or 2 yr. of operation, extending maintenance intervals. Reference owner's manual to determine proper coolant type.

Compressor Oil—Reference owner's manual and select oil based on service interval.

- Rotair—2000-hr. mineral-based oil
- Rotair Plus—4000-hr. blended oil

Maintenance Kits—Provide the required filters, fluids, and parts to help optimize your compressor's performance and enhance equipment longevity. Compressor oil not included.

Mobil™ RENEWABLE LUBRICANTS Jenny AIR COMPRESSOR

Lubricants for Air and Refrigeration Compressors

Renewable Lubricants®—
Nos. 21A504 and 21A505 are a biobased/synthetic formula that can replace hydrocarbon oil-based compressor fluids. Ultimate biodegradable.

Ultimate Blue®—This 100% synthetic, nondetergent oil features ashless antiwear additives plus rust and oxidation inhibitors.

SYNTHETIC AIR COMPRESSOR OIL

Highly resistant to oxidation and deposit formation in small portable and stationary reciprocating compressors. More sizes available on Grainger.com®.

Mobil Rarus® 800 Series—
Recommended for single and multistage air compressors (not for breathing air applications). This oil is very effecitve for continuous high temperature operation with discharge temperatures up to 200.

Renewable Lubricants® Bio-SynXtra™ Food Grade, Air Compressor—
Biosynthetic oil is zinc-free. Provides superior antifoam, antirust, and demulsibility properties. Recommended for use in rotary, reciprocating, and centrifugal compressors.

REFRIGERATION COMPRESSOR OIL

Highly refined naphthenic base oil is suitable for reciprocating compressors (cylinders and bearings) using many types of refrigerants except sulfur dioxide. More sizes available on Grainger.com®.

Renewable Lubricants® Bio-SynXtra™ Food Grade, Refrigeration Compressor—Compatible with CO_2, ammonia, and R12 refrigerant systems.

FOOD GRADE COMPRESSOR OIL

For use in portable and stationary rotary vane and screw compressors, single-stage, 2-stage, and multistage reciprocating compressors. No. 36N465 features antifoam, antirust, and demulsibility properties. All items are biodegradable.

4- to 30-HP 2-Stage Air Compressor Pumps

SPEEDAIRE

- Cast-iron construction
- Stainless steel valves for long life
- Max. pressure: 175 psi
- Oil level sight glass

Splash Lubricated—Designed to cycle On/Off while providing continuous air with an 80/20-duty cycle. Rated for heavy-duty commercial use in new or replacement applications. Pumps come with large-capacity oil reservoir with sight gauge. No. 3Z411 unloader and pilot valves allow constant speed operation or dual control. Recommended oil is No. 4ZF21, sold separately on page 2568.

Pressure Lubricated—Oil pump provides lubricant to all critical areas. Spin-on filter for continuous oil filtration.

3- to 15-HP 2-Stage Air Compressor Pumps

CHAMPION

Designed for heavy-duty industrial applications. Die-cast aluminum cylinders with cast-iron sleeves for greater efficiency, cooling, and service life. Balanced, fan-type flywheels provide airflow for cooling pump. Rotation CCW facing flywheel. Splash-lubricated models feature cast iron head, cylinders, and crank shaft with stainless steel Swedish valves for rugged durability and long life.

Intercoolers efficiently dissipate heat. Include unloader and pilot valve for constant speed operation. Centrifugal unloader provides efficient pressure release for loadless starting.

Note: To determine motor pulley size: Compressor pulley x compressor rpm ÷ motor rpm = motor pulley size.

3- to 15-HP Single- and 2-Stage Air Compressor Pumps

Ingersoll Rand

TYPE 30

Durable, cast-iron cylinders, heads, and frame are designed for continuous operation with the use of Ingersoll Rand All Season Select Lubricant and extends pump life. Overhung crankshaft is precision balanced to run smoothly and quietly. 1-pc. connecting rod. Cylinders can be removed for easy repair and service. Pumps are splash lubricated.

SINGLE-STAGE

Durable, cast-iron cylinders, heads, and frame are designed for continuous-duty operation with the use of Ingersoll Rand All Season Select Lubricant.

2-STAGE

Splash-lubricated pump includes cast-iron cylinders and crankshaft. Stainless steel valves are for rugged durability and long life.

WILKERSON

Pneumatic-Operated Drain Valves

Automatically drain harmful condensate from compressed air systems.

WaterHog™—Innovative design without ½" passages to help ensure clog-free operation.

Drain-All®—No. 22PT26 allows greater throughput of solid debris. No. 22PT27 is ideal for use in old intercoolers/aftercoolers, receiver tanks, and piping where debris, rust, and scale are commonly found.

Wilkerson® Automatic Drain Valves—For use with compressors up to 100 HP. Override feature on No. 5Z617 allows manual operation.

Pneumatic Zero Loss Condensate Drain—Helps powers through condensate build-up and has auto-adjust without any type of manual input. Ideal for compressor applications up to 25HP.

SPEEDAIRE

Zero Air Loss Drain Valves

Can discharge condensate without the loss and waste of compressed air. Electronic models have a sensor to open and close the valve, while float drains use a float mechanism to operate the valve. Valves with 90 to 260V are compatible with 115V and 230V.

control devices, LLC

Safety Valves

Adjustable Noncode—Pressure range of 25 to 200 psi. Features brass body with silicone rubber seal and stainless steel springs. 9/16" hex body x 1.56"L.

Adjustable Vacuum/Pressure—Easily convert from vacuum to pressure relief by reversing poppet and spring. Relieve vacuums from 0" to 30" Hg or pressure to 20 psi.

ASME Hard-Seat—Lead seal allows visual detection of tampering. Brass body, stainless steel ball on brass seat and stainless steel spring. External threads coated with thread sealant.

Note: Pressure Settings are available on Grainger.com®.

ASME Soft-Seat—1-pc. brass body has resilient silicone elastomer O-ring for a leakproof seal. External threads are coated with thread sealant.

Note: Pressure Settings are available on Grainger.com®.

High-Capacity ASME—Brass bodies with stainless steel springs and silicone O-ring seals.

Threaded Outlet ASME—Valves feature brass/stainless steel construction. Silicone rubber O-ring seal and lead seal.

Variable Pressure—May be used wherever a low-flow variable pressure relief valve is used. Micrometer-style scale, 0 to 100 psi. Brass body/nylon knob. Stainless steel poppet/fluorocarbon O-ring.

Check Valves

Compact—Brass body check valves, stainless steel spring, and stainless steel ball on Viton® O-ring. Max. pressure: 250 psi.

Compressor In-Tank and Valves For Tubing—Brass body, fluoropolymer poppet, and stainless steel springs. Max. pressure: 400 psi. External threads coated with thread sealant. 1/8" (F)NPT tapped unloader port with removable plug.

Bronze—Valves open at less than 3 psi; withstand up to 400 psi back pressure. 1/8" tap for pressure switch unloader connection. Vertical or horizontal mounting.

Unloader and Check Valves—Brass body, PTFE seals, and stainless steel springs. Max. working pressure: 250 psi. Nos. 5A703 to 5A706 have (F)NPT inlet and (M)NPT outlet to tank. Nos. 4X996 to 4X999 are threaded to accept compression fitting at inlet.

In-line—Valves open at less than 1 psi with max. operating pressure of 400 psi. All-brass bodies with glass-filled PTFE poppets and stainless steel springs. Nos. 4X828 and 4X829 have 1/8" (F)NPT tapped port for pressure switch unloader connection.

Continuous Run Unloader Controls

Convert any pressure switch control compressor to a constant speed unloader type. Can be applied to any 30 cfm or less electric or gas engine-driven compressor. 60 to 250 adjustable psi range preset to cut in at 95 psi and out at 115 psi. Contain: pilot valve, check valve, and suction or vent unloader valve.

Oil Mist Exhaust Filters and Replacement Filter Elements

SOLBERG

- Carbon steel bowl type
- Manual drain recirculates oil back to pump
- 0.3-micron, multilayered glass media replacement elements
- Temp. range: 68° to 180°F

Exhaust filters trap oil fog, mist, or smoke from discharge of oil-flooded vacuum pumps and return oil to pump before oil mist contaminates work environment. Feature large oil holding capacity. Pleated coalescing element provides increased surface area to minimize back pressure of system and maximize filtration efficiency. O-ring seals prevent leakage.

Inlet Vacuum Filters and Separators for Blowers and Vacuum Pumps

Note: For additional standard- and extreme-duty filters, see Grainger.com®.

"L" Style Filters—Install on the inlet of any type of vacuum pump/blower. Filters have O-ring seals and polyester replacement elements. Fitlers are rated for vacuum service.

"T" Style Filters—Cast-aluminum top resists corrosion and has an integrated baffle for longer filter element life.

SOLBERG

Liquid Separators for Blowers and Vacuum Pumps

- See-through drop bucket
- Manual drain type
- Cast-aluminum head

Separate liquid, debris, and sludge from the air stream to protect pump from damage; integrated float ball cuts off airflow when the liquid level reaches max. capacity. Use with regenerative blowers in food packaging, soil remediation, and metal/chip processing applications, as well as with vacuum pumps and systems.

Tank-Mounted, Enclosed Oilless Air Compressors

- Field-adjustable pressure switch
- Single phase

Innovative reservoir can provide a blast of high pressure. Tank dampens pulsation from the reciprocating compressor.

All models except No. 5Z671 incorporate a Gast piston compressor pump listed below. Pressure switch setting: 70 psi-On/90 psi-Off. No. 5Z671 has 30 psi-On/50 psi-Off. Gray finish.

⅛- and 1/6-HP Compressors—Include pressure switch, manual drain, pressure safety valve, pressure gauge, and globe valve.

⅓- to 1½-HP Compressors—Include coded tank, pressure switch, manual drain, pressure safety valve, pressure gauge, and globe valve. No. 5Z676 has magnetic starter.

No. 5Z672

No. 5Z675

Rotary Vane Compressors and Vacuum Pumps

- Oilless design
- Permanently lubricated and sealed bearings
- Self-adjusting, self-lubricating vanes

For general continuous-duty vacuum and low-pressure applications. Nos. 3KYY4, 4F740, 4F741, 4F742, 4TF21, and 4TF22 have integral mufflers and filters, as well as international multivoltage, dual-frequency motors. All units are single phase except for Nos. 2CJG8 and 4TF21; single-phase units have thermal overload protection. Nos. 4Z470 and 4Z469 include coupling and coupling guard. Mount directly to 56C frame motors.

Note: When used for pond aeration, include the appropriate check valve in discharge line to prevent water from entering pump in case of power failure.

THOMAS by Gardner Denver

Diaphragm Compressors/ Vacuum Pumps

- Pressure or vacuum without modification
- Quiet operation

Permanently lubricated, virtually maintenance-free units offer the versatility of reversible 1/8" and 1/4" inlet and outlet ports.

Thomas Models—Nos. 4Z792, 4Z791, and 5Z348 come equipped with a 6-ft. grounded power cord.

TA Series Air Compressors/Vacuum Pumps

THOMAS
by Gardner Denver

Powerful pumps feature a 1725 rpm motor with permanently lubricated, sealed ball bearings. Automatic reset thermal protection. ¼" (F)NPT outlet.

TA SERIES, HIGH-FLOW, 2-STAGE

Capacitor-start, high-torque motor features heavy-duty piston, cast-iron cylinder sleeves, and low-lift reed valves. Allows for direct coupling of pressure switch, eliminating need for air tank.

No. 3HCA6

Units feature rugged flexible piston cup and shaded-pole motor with automatic thermal protection and high-torque start windings. Corrosion-resistant sandwich valve stops foreign particles from lodging on valve seats. Aluminum cylinders, cylinder heads, and pistons.

Welch®—Provide adjustable vacuum for light industrial and QC laboratory applications. No. 38XV25 can handle high-moisture vapor loads and has a 10-gal. vacuum tank system for pick and place, small scale vacuum forming, and vacuum chucking.

Vacuum Pump Oils

These oils meet rigid requirements for vapor pressure, stability, and viscosity. Tested for high vacuum levels. No. 3HDP8 is specifically formulated for Gast® lubricated rotary vane air motors and rotary vane compressors/vacuum pumps. No. 6D753 is synthetic oil, recommended for corrosive gas applications.

No. 6D736

Corrosive Environment Vacuum Pumps

2-stage high-vacuum pumps are used for pumping corrosive gases to pressures below 1 Torr (1mm of Hg). Vane springs, valves, pressure tubes, and oil baffle are made of stainless steel. Oil case is PTFE lined. Nitrogen purge helps reduce corrosion. Gas ballast valve inhibits vapor condensation. Low rpm reduces friction wear. Large oil reservoir dilutes contaminants.

No. 6D735

DUOSEAL® Standard High-Vacuum Pumps

- Large oil reservoir
- Continuous duty with thermally protected motors

Low pump rpm (400 to 580 rpm). Pumps operate 20°F cooler than many high-rpm direct-drive pumps. All-metal internal construction and 2-stage rotary valve design.

Contoured molded belt guard and base on Nos. 3Z655 and 3Z656 for quieter operation. Gas ballast inhibits condensation inside pump. Factory wired for 115V operation. Intake filter screens. Belt guard, base, motor with On/Off switch, and 3-wire cord. Blue/gray finish. Oil included.

Commercial and Industrial Refrigeration Service Pumps

WELCH by Gardner Denver — DUOSEAL®

No. 5Z025

Designed for removing air and moisture from industrial and commercial chillers. Vacuum pumps are rated for low-micron Hg vacuum, continuous duty. Pumps include a gas ballast valve that inhibits condensation reducing corrosion, On/Off switch, 3-wire cord, and oil.

DuoSeal® Belt-Drive—All-metal internal construction and low pump rpm provide long service life. Large oil reservoirs dilute contaminants. Come complete with base, belt, belt guard, and motor. No. 5Z025 also includes carrying handles.

Application	Tonnage	Item No.	Pump Capabilities
Lithium Bromide Absorption Chiller	100 to 500 500 to 1000 1000 to 1500	5Z025 5Z025, 6D731 6D731, 6D733	Handles harsh salt-laden water vapor. Withstands accidental ingestion of salt solution. Recirculates clean fraction of vacuum pump oil.
Cold Storage	10 to 50 50 to 500 500 to 1000	5Z025 5Z025, 6D731 6D733	Handles long pumpdown time effectively. Handles high water vapor loads. Draws a very deep vacuum.
HCFC, CFC or Ammonia Chiller	10 to 50 50 to 500 500 to 1000	5Z025 5Z025, 6D731 6D733	Seals and gaskets won't break down in the presence of R-11, R-12, R-13, R-22, R-113, R-123, R-114, R-502, R-503 or ammonia. Handles high water vapor loads. Draws a very deep vacuum.

Static Eliminating Air Gun, Air Cannon, and Power Supplies

EXAIR

- Pressure range: 5 to 120 psi

Air gun is for manual operations; air cannon is mountable for stationary applications.

Power Supplies—Include metal case and feature lighted power switch.

- 50/60 Hz
- 5mA max.
- Mounting: flange

EXAIR®

Air Amplifiers and Air Amplifier Kits

- Pressure range: 5 to 120 psi
- Temp. rating: 275°F for aluminum; 400°F for stainless steel

Compact, lightweight, and portable amplifiers run on compressed air so electricity is not required. Both the vacuum and discharge ends can be ducted, making them excellent for drawing fresh air from another location or moving smoke and fumes away. High-efficiency amplifiers feature an exact air gap; adjustable amplifiers can be adjusted up to 0.010" at 80 psi. Kits include shim set, filter separator, pressure regulator, and filter/regulator mounting hardware.

EXAIR®

Air Conveyors and Air Conveyor Kits

- Pressure range: 20 to 250 psi
- Temp. rating: 275°F for aluminum; 400°F for stainless steel and hardened steel alloy

Connect conveyors to common hose or duct to move large volumes of material over long distances with a small amount of compressed air. Kits include mounting bracket, filter separator, pressure regulator, and filter/regulator mounting hardware. Pressure regulator makes it easy to control the material flow rate. Ideal for bulk material and scrap.

Hardened Steel Alloy—Heavy-duty conveyors can move more material over longer lengths. Hardened steel alloy won't wear prematurely and can withstand abrasive material applications.

Regenerative Blowers

Industrial-duty, oilless air blowers can be used for pressure or vacuum. Flow without pulsation at low noise levels and are dynamically balanced to eliminate vibration. Equipped with continuous duty TEFC motors, aluminum alloy impeller, mounting base, and housing. Use as original equipment or for upgraded performance. Pneumatic air tube conveying systems, vacuum cleaning systems, vacuum lifting, vacuum hold down, vacuum transport, bottle filling stations, printing presses, screen printing, air cushion tables, drying systems, weld fume extraction, textile machinery, dental equipment, waste and water fish pond aeration, aquarium aeration, aeration plating tanks, and air knife systems. For use with air and noncombustible, noncorrosive, nonexplosive gases.

Note: A vacuum or pressure relief valve (sold separately) is required for proper operation.

Performance ratings shown are rated with motor running at 60 Hz. If 50 Hz is used, deduct ⅙ from rating. Min. cfm ratings are at continuous flow. Relief valves are mandatory for flow conditions that are under min. or less.

Conversions: to psi = (in. of water x 0.036); to in. Hg = (in. of water x 0.074).

High-Pressure Turbo Blowers—Cast-aluminum blower housings and enclosed impellers provide higher pressure capabilities than centrifugal blowers.

Rebuild Kits—Contain all the essential parts needed for routine maintenance: silencer assembly, bearing shims, bearings, and shaft seal.

Inlet Filters with Replaceable Covers

Filters have perforated outer cylinders; inner cylinder is wrapped with fine 0.009" mesh screen. Replaceable filter covers are made of ⅞"-thick, 100% polyester filter media. They provide 80% efficiency to 5 microns and are for use with Fuji, Gast, Rotron, Siemens, and Spencer regenerative blowers.

SPEEDAIRE

Positive Displacement Blowers and Vacuum Pumps

Drop-in replacements for various roots-type blowers and vacuum pumps. Used in various industrial applications such as pneumatic conveying, wastewater treatment, surface cleaning, and dairy milking. Handle continuous loads. Alloy steel timing gears assure nonslip timing. High-strength drive shaft provides greater blower durability and installation flexibility. High-strength cylinder with heat-dissipating fins for reduced noise and vibration. High-temperature seals provide leak-free operation in severe-duty applications. Blowers are available in horizontal and vertical configurations.

Air-Cooled Aftercoolers

AKG®

- Aluminum bar/plate material
- Max. pressure: 250 psi
- Mounting legs included

Remove harmful water, oil, and contaminants from compressed air systems. Compatible with most rotary and piston air compressors. Hollow profile reduces local peak strains, which significantly increases cooler service life. Internal and external fins optimize cooling power.

ISO 8573.1 Air Quality Classes

Maintaining air quality is so important that the International Standards Organization (ISO) developed 6 compressed air quality classes, as defined by ISO 8573.1. Testing methodology established at 100°F inlet temperature, 100°F ambient temperature, and 100 psig.

No. 3YA51

No. 3YA44

SPEEDAIRE Hankison

Refrigerated Air Dryers

SPEEDAIRE® SERIES

Nos. 3YA49 and 3YA50 include an illuminated On/Off switch, high-efficiency separator, and no air loss float drain. Nos. 3YA51 to 3YA53 include an illuminated On/Off switch, high-efficiency separator and timed electric drain.

HANKISON® SERIES

Fully automatic operation ensures maximum moisture removal. Easily installed units come preassembled with quality components for long service life. All units with max. air compressor HP over 25 include a coalescing filter and auto-drain. Nos. 3YA43 and 3YA44 include high-efficiency separators without air loss, Power On light, and 6-ft. power cord. Nos. 3YA45 includes On/Off switch, Power On light, dew point indicator, and 6-ft. power cord.

SPEEDAIRE

Refrigerated Compressed Air Dryers

- ISO Class: 5*
- Max. incoming pressure: 232 psi
- Max. inlet temp.: 122°F
- 115V
- 6.1 full-load amps

Refrigerated compressed air dryer helps to dry air by passing it through a refrigerated heat exchanger. By cooling the air that enters the compressor, the dryer allows water vapor to condensate and drain out. Providing dry air can help protect your pneumatic piping, tools, and equipment. Also features digital controller and power saving low-pressure drop.

No. 29FK71

No. 2HUE1

Ingersoll Rand

Refrigerated Cycling Air Dryers

- ISO Class: 4*

Refrigeration compressor turns off during periods of reduced loads to match actual compressed airflow, drawing only the energy required to provide continuous-pressure dew point performance. Innovative centrifugal separator allows high moisture separation and removal. Unwanted water from the air is discarded through a timed condensate drain.

Heatless Twin Tower Regenerative Desiccant Air Dryers

- ISO Class: 2*
- Max. working pressure: 150 psi
- Max. inlet temp.: 120°F
- 115V
- 5.0 full-load amps

1-phase units feature advanced microprocessor controllers and include prefilters and afterfilters to remove oil and contaminates. NEMA 4 enclosure protects controller against water and condensation. Easy desiccant change. Switching valves direct wet inlet air between the 2 towers to provide a continuous supply of dry air. Diagnostic controls show regenerative sequence status.

SPEEDAIRE

Disposable In-Line 4-Stage Desiccant Filter/Dryer

Ideal for paint-spraying applications. Removes dust, dirt, water vapor, and oil aerosols that may have bypassed main air filtration system. Blue desiccant bead lowers dew point to -40°F and removes all water vapor. Replace filter when blue beads turn pink. Bidirectional flow.

3¾" x 1 11⁄16" dia. ¼" NPT with female inlet and male outlet; can be attached at either end. 15 cfm.

Membrane Air Dryers

Hankison® Parker

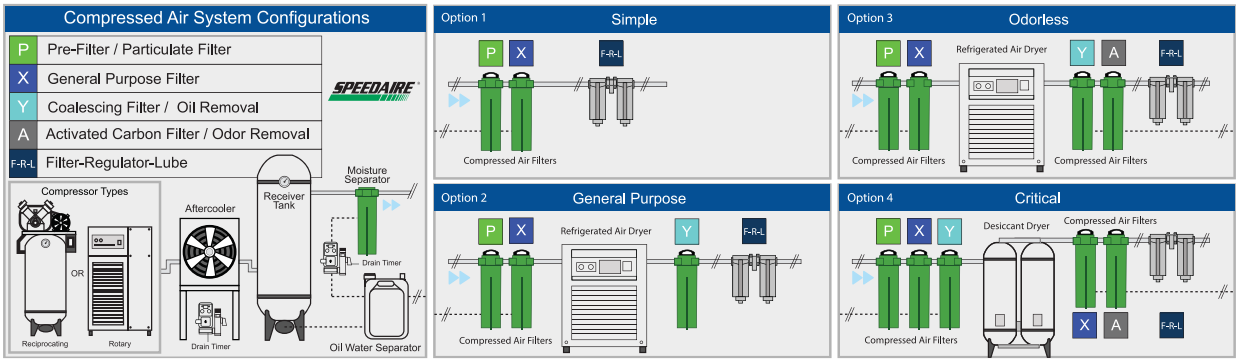
Hankison® HMM Series—Units constantly exhaust extracted water vapor into the ambient surroundings. NEMA 7 Hazardous Environments. Grade 5 high-efficiency oil removal prefilter included.

- ISO Class: 2 to 6*
- Max. inlet temp.: 150°F
- Max. ambient temp.: 150°F

Hankison® SSM Series—Digital purge control governs a 2-way valve to control the venting sweep air, for applications where processed air demands start and stop. Grade 5 high-efficiency oil removal prefilter included.

- ISO Class: 2 to 6*
- Max. inlet temp.: 150°F
- Max. ambient temp.: 150°F

Parker AD Series—No electricity required; safe for hazardous environments (NEMA 7). Auto drain, water separator, and Grade BX coalescing filter included. Average membrane life: 15 yr.



- ISO Class: 4 to 6*
- Max. inlet temp.: 120°F
- Max. ambient temp.: 120°F
- +35°F dew point (at rated flow)

Compressed Air System Configurations

No. 4GNL4

Condensate Separators

SPEEDAIRE WILKERSON

Feature a centrifugal airflow pattern that helps remove bulk contaminants from the compressed air stream. Low pressure drop. Separators equipped with auto drain automatically discharge condensate and dirt.

Note: For additional sizes, go to Grainger.com® and search by "Condensate Separators".

SPEEDAIRE

Oil and Water Mist Eliminators

Deliver high quality compressed air and help protect systems against slugs of oil and compressor separator failure. Models have long life and are suitable for harsh operating conditions. Eliminators remove oil-mist, water, and particle carryover (1 micron) from piston or oil-flooded rotary compressors. Models have a low pressure drop (0.5 psi/0.03 bar) and a maximum oil aerosol content of 0.5 ppm. Eliminators with flow rates up to 6000 cfm are available on Grainger.com.

Hankison

Air/Liquid Bypass Valve

Service components without shutting down the system; simply push 1 button to change modes. Push-button can be locked in place to make valve tamperproof. Inlet and outlet fittings are compression type with rubber ferrule. Ideal for most brands of refrigerated dryers, 5 to 15 cfm. Can be used with liquid and gases compatible with nylon, Buna N, and brass.

High-Pressure Compressed Air Filters

- Max. pressure: 725 psi

Rugged filters are constructed of heavy-duty, no-weld, fully anodized aluminum. Include a manual drain. Filters with a max. pressure of 5075 psi are available on Grainger.com®.

Compressed Air Filters

SPEEDAIRE®

- Max. pressure: 290 psi (20.0 bar)
- Max. temp.: 176°F (122°F for activated carbon filters)
- Include float drain (except activated carbon filters)

Efficiently remove oil, oil vapor, particulates, water, and other contaminants. Units feature aluminum body with epoxy powder-coated finish. Tie Rod filters use a threaded post-mounted element. Zero Clearance filters use a drop-in cartridge and require no vertical clearance. Activated Carbon filters are not intended for removing carbon dioxide or carbon monoxide.

Multistage Sterile Air Filter Assemblies

- Max. pressure: 250 psi
- Max. temp.: 130°F
- 2 ports

Complete 3-stage sterile air systems feature integrated prefilter assembly that includes high-efficiency coalescing filter for removal of liquid and solid contaminants, automatic drain, and a color-coded differential pressure measurement to indicate filter changes. The final-stage sterile air grade filter removes all viable organisms. Individual components are also available separately. Sterile air filters do not require drains.

Pneumatic Air Filters and Replacement Elements

Ingersoll Rand

- Max. pressure: 250 psi
- Max. temp.: 176°F
- ½" NPT drain port
- Auto float drain type

Filter media repels water and oils to provide extended filter life and minimized pressure drop across the filter element. Include filter element service indicator.

Compressed Air Filter Replacement Elements

Replacement filter elements retrofit most housings and effectively remove oil, water, and particulate from any compressed air system.

Additional filter elements are available on Grainger.com®.

SPEEDAIRE

Oil Removal (Coalescing) Filters

- Filters to 0.01 microns
- Service life indicator is standard (except miniatures)
- Max. pressure: 150 psi (polycarbonate bowl); 250 psi (metal bowl)
- Max. temp.: 125°F (polycarbonate bowl); 150°F (metal bowl)
- Modular connector allows easy removal and replacement

For maximum life, use in conjunction with a general purpose air line filter equipped with a 5-micron element.

Note: Polycarbonate bowls are not recommended for use in atmospheres containing chemicals such as acetone, benzene, carbon tetrachloride, ethylene dichloride, gasoline, toluene, and/or air compressor systems using synthetic fire-resistant lubricants.

General Purpose All-in-One Filter/Regulator

- 40-micron filter elements (Mini are 0.01 and Miniature are 5 micron)
- Polycarbonate bowl: 150 max. psi; metal bowl: 250 max. psi
- Modular connector allows easy removal and swap out

Note: Polycarbonate bowls are not recommended for use in atmospheres containing chemicals such as acetone, benzene, carbon tetrachloride, ethylene dichloride, gasoline, toluene, and/or air compressor systems using fire-resistant lubricants.

WARNING: Do not connect to bottled gas.

**** cfm flow measured with 150 psig inlet adjusted to a set pressure of 90 psig (while increasing flow) and a 15 psig drop.***

In-Line Lubricators

- Polycarbonate bowl: 150 max. psi; 125°F max. temp.
- Metal bowl: 250 max. psi; 175°F max. temp.
- Modular connector allows easy removal and swap out

Lubricators maintain a constant oil-to-air density over a wide range of flow. An integral flow sensor provides proportional control.

Note: Polycarbonate bowls are not recommended for use in atmospheres containing chemicals such as acetone, benzene, carbon tetrachloride, ethylene dichloride, gasoline, toluene, and/or air compressor systems using synthetic fire-resistant lubricants.

SPEEDAIRE

Micromist—Provides lubrication for multiple pneumatic tools/devices. Comes equipped with a red 360° sight/feed dome.
- Up to 50-ft. pipe runs

Mist—Ideal lubrication for a single tool/device. Includes a green 360° sight/feed dome.
- 15- to 20-ft. pipe runs

SPEEDAIRE

2- and 3-Pc. Combination Units

- Modular connector allows easy removal and swap out

2-pc. units combine filter/regulator with MicroMist or Mist lubricator. 3-pc. units combine filter, regulator, and MicroMist or Mist lubricators. Include Speed Clamps™, mounting brackets, and pressure gauge. Nos. 4ZM01 to 4ZM04 and 4ZL99 do not include mounting bracket or gauge. Some assembly required. For replacement filter elements, see page 2594.

Note: Polycarbonate bowls are not recommended for use in atmospheres containing chemicals such as acetone, benzene, carbon tetrachloride, ethylene dichloride, gasoline, toluene, and/or air compressor systems using synthetic fire-resistant lubricants.

SPEEDAIRE

Modular Connectors

- Allow easy removal and replacement of Speedaire® components

Use Speed Clamps™ instead of pipe nipples to interconnect components.

Modular Pneumatic Lockout Valves—3-way function valves can be padlocked in the closed (vented) position only. Installed in the pressure inlet of pneumatic devices.

Porting Blocks—Provide 3 auxiliary ¼" NPT outlets to pipe high-pressure or nonlubricated air.

Manifold Blocks—Permit 90° attachment of additional system components such as filters, regulators, or pressure switches.

WILKERSON®

General Purpose Filters

- High-efficiency 5-micron filtration

Rugged, lightweight construction with high-flow capability and excellent water removal efficiency. Have a positive bayonet bowl latch and barbed manual drain connection with pipe-away.

Note: Models with a polycarbonate bowl should not be located in areas subject to direct sunlight, direct impact, or temperature outside rated range. Incompatible with chlorinated hydrocarbons, ketones, esters, and certain alcohols. Not for use in air systems where compressors are lubricated with fire-resistant fluids such as phosphate ester or diester. Should not be used where strong acids or bases are present or in salt-laden atmospheres.

No. 5GC16

No. 2KEH5

WILKERSON®
GA GRAINGER APPROVED

General Purpose Regulators

- Accuracy: ±1 psi

2-gauge ports can be used as additional regulated outlet ports. Can be serviced without removal from air line. Dial regulators feature a transparent, pressure-calibrated, nonrising adjustment dial for quick adjustment of secondary pressure, ±1 psi. Can be mounted in any position so dial face is always visible.

WARNING: Do not connect regulator to bottled gas.

† cfm flow measured with 100 psig inlet adjusted to a set pressure of 90 psig and a 15 psig pressure drop. * The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design.

WILKERSON®

Oil Removal (Coalescing) Filters

- 0.01 micron, except Nos. 6B257, 6B256, 6B255, and 6B254 are 0.5 micron

Eliminate 99.9% or more of water and oil liquid aerosols and submicron particles.

Note: For maximum life, use in conjunction with a 5-micron element.

In-Line Lubricators

- Polycarbonate bowl: 150 max. input psi; 125°F max. temp.
- Metal bowl: 250 max. input psi (except jumbo units are 200 max. input psi); 150°F max. temp.

Install unit close to the application to ensure effective oil distribution.

Note: Should not be located in areas subject to direct sunlight, direct impact, or temperatures outside rated range. Incompatible with chlorinated hydrocarbons, ketones, esters, and certain alcohols. Not for use in air systems where compressors are lubricated with fire-resistant fluids such as phosphate ester or diester. Do not use cleansing agents such as acetone, benzene, carbon tetrachloride, gasoline, toluene, etc. Should not be used where acids or bases are present or in salt-laden atmospheres.

2- and 3-Pc. Combination Units

- Remove particulate down to 5 microns
- Max. pressure: 150 psi (polycarbonate bowl), 250 psi (metal bowl)
- Max. temp.: 125°F (polycarbonate bowl), 150°F (metal bowl)

2-pc. design integrates filter/regulator and lubricator, and 3-pc. design integrates filter, regulator, and lubricator into a single unit. Ready-to-mount assemblies come with a pressure gauge and modulator T-bracket/joiner assembly. For replacement filter elements, see pages 2596, 2597.

† cfm flow measured with 100 psig inlet adjusted to a set pressure of 90 psig and a 15 psig pressure drop. * The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design.

Piggyback Air Line Filter/Regulators

- 5-micron filter element
- Metal bowl/sight glass
- 150°F max. temp.
- Adjustment range: 0 to 125 psi

Compact units are made of die-cast zinc.

WARNING: Product rupture can cause serious injury. Do not connect regulator to bottled gas. Note: Should not be used where strong acids or bases are present or in salt-laden atmospheres.

In-Line Lubricators

- 250 max. input psi; 150°F max. temp.

Install close to the application to ensure effective oil distribution. Zinc bowl.

Note: Should not be located in areas subject to direct sunlight, direct impact, or temperatures outside rated range. Incompatible with chlorinated hydrocarbons, ketones, esters, and certain alcohols. Not for use in air systems where compressors are lubricated with fire-resistant fluids such as phosphate ester or diester. Do not use cleansing agents such as acetone, benzene, carbon tetrachloride, gasoline, toluene, etc. Should not be used where acids or bases are present or in salt-laden atmospheres.

Prep Air II
No. 21U793

General Line
No. 21U833

2- and 3-Pc. Combination Units

- 5-micron particulate filter
- Max. pressure: 250 psi
- Max. temp.: 175°F, except Nos. 21U832 to 21U835 are 150°F

Feature either a manual or automatic drain to remove collected water from filter bowl. Provide long life and accurate pressure regulation. Units have die-cast zinc bowl and included gauge. Easy to install in most pneumatic systems. Metal bowl kits available on Grainger.com®.

General Purpose Filters

No. 36JN51

No. 36JN52

Help separate dirt, dust, and moisture from compressed air and feature a built-in nighttime drain that automatically operates once the main air line is turned off. 40-micron bronze filter element provides long service life. Aluminum bowls are ideal for use where ambient air may contain chemicals.

Description	Pipe Size	Max. Flow	Max. Pressure	Max. Temp.	Overall Height	Overall Width	Item No.	Compares To	Replacement Filter Element, 5 Microns Item No.	Replacement Filter Element, 40 Microns Item No.

Pneumatic Accessories

Exhaust Silencer Mist Eliminators—Attach to a vertical leg of an air system to nullify pneumatic exhaust noise. Help remove oil mist from exhaust air for a cleaner work environment.

Heavy-Duty Lockout Valves—Exhaust all downstream pressure in an air line system. Can be padlocked in the closed (vented) position only.

Air Fuses—Designed to eliminate hose-whip if air line is accidentally cut.

Miniature Adjustable Pressure Relief Valve—Use in low-volume air tanks to retard excessive pressure.

Marine Exhaust Water Hose

No. 45DU77

- Temp. range: -40° to 250°F

This soft wall hose can be used as a straight connection in a wide range of water transfer and discharge applications. Constructed from black EPDM tubing and cover with reinforced polyester cord for added strength. The extreme temperature range makes hose ideal for marine wet exhaust systems. Various sizes allow a tight fit over standard pipe permitting secure pipe-to-pipe connections and vibration absorption. Meet SAE J2006R1 standard.

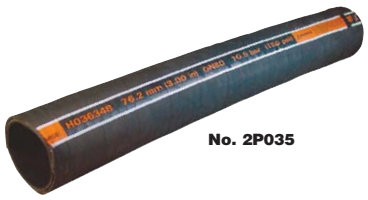
Washdown Water Hose

- Max. pressure: 300 psi

Efficiently and hygienically handles equipment cleaning in food processing plants, dairies, paper mills, and other industrial operations.

White—EPDM tube with a white EPDM cover. No. 2P570 has tapered nozzle at 1 end and a ¾" long shank brass female fitting, double-banded, on the other end. Garden hose threads.



White with Antimicrobial—Synthetic rubber hose has a white EPDM rubber cover with antimicrobial protection and spiral textile reinforcement. Resists oils and animal fats found in food processing plants, dairies, canneries, and creameries.

Yellow with Antimicrobial—Carbryn®-covered yellow synthetic rubber resists oil and abrasion; provides max. protection against oil and animal fats. Outside cover incorporates antimicrobial protection.

Steam Hose

- Max. pressure: 250 psi
- Temp. range: 0° to 450°F
- Reinforced double-wire braid (½" hose has single-wire braid)

Designed for cleaning, heat control, fire prevention, purging, thawing, blow-out service, steam pumps, and hoists in open-end or permanent installation operations. Cover and tube are synthetic rubber. Assembled hose fittings are clamped. Crimp-coupled hoses offer a smooth grip for operator comfort. Zinc-plated steel female coupling spuds are available separately.

Note: Nos. 4KT61 and 4KT62 include a female wing nut. A female or male spud may be needed to complete the assembly. Bulk hose can use fittings and clamps on page 2531.

Material Handling Hose

PVC/Thermoplastic—Handles abrasive materials including cement, fertilizers, fly ash, glass, gravel, metals, plastic pellets, rock salt, sand, and slurries where material may have some moisture. Meet RMA Class B standard.

Thermoplastic—For use in the dry pneumatic conveying of highly abrasive solids.

Dry Bulk—Ideal for transferring dry abrasive materials such as bottle caps and cleaning agents. Suitable for use in coal plants, dry cement operations, in-plant transfer, and well service applications.

Hot Air—For use in construction, hot air blowing, in plant, and non-oily applications. Can be use for dry cement and tank truck delivery operations.

Nutriflo PVC Food & Beverage Hose Assemblies with Smooth PVC Cover

- Temp. range: -25º to 230º F
- Safety factor: 4:1

Nutriflo PVC (polyvinyl chloride) food and beverage hose assemblies have a smooth PVC cover and are suitable for transferring dry foods and liquids in gravity-flow and vacuum-service applications. These hoses can handle higher pressures than Nutriflex PVC food and beverage hoses with corrugated covers. They are well suited for transferring raw and pasteurized milk and other dairy items with high water content.

Nutriflo PVC Bulk Food & Beverage Hoses

Continental
ContiTech

No.
55AW09

- Safety factor: 3:1

Nutriflo PVC (polyvinyl chloride) bulk food and beverage hoses have a smooth PVC cover and are suitable for transferring dry foods and liquids in gravity-flow and vacuum-service applications. These hoses can handle higher pressures than Nutriflex PVC bulk food and beverage hoses with corrugated covers. They are well suited for transferring raw and pasteurized milk and other dairy items with high water content.

HI-TECH DURAVENT
Flexible Hose & Ducting

Flexflyte Fiberglass Duct Hose

Neoprene-coated fiberglass duct hoses are used to blow or exhaust hot air for pellet drying applications in the plastics-processing industry. These lightweight, flexible hoses are flame-retardant and self-extinguishing. They can handle fumes at low pressures and moderately high temperatures, but they are not recommended for applications with continuous flexing, liquids, or abrasives.

FLEXFLYTE VF PVC-COATED FIBERGLASS - GRAY
- Temp. range: -20° to 200°F

Flexible material has PVC-coated wire helix. Ideal for low-pressure air.

HI-TECH DURAVENT
Flexible Hose & Ducting

Industrial Ducting Hose

Reinforced PVC (polyvinyl chloride) duct hoses are used for moving large volumes of air in chemical fume-removal, general fume-removal, and solvent-ventilation applications in the food-manufacturing, chemical-manufacturing, pharmaceutical, industrial woodworking, and plastics-processing industries. These hoses can also be used for low-vacuum applications on dust-cleaning equipment. These hoses resist damage from chemicals and moisture, and they are made from transparent material that lets users see what's in the tube. The hoses are highly compressible, which saves space when transporting them.

ARD COMPRESSIBLE PVC
- Temp. range: -20° to 180°F
- Highly compressible

Sturdy, flexible PVC wall construction reinforced with spring wire helix provides an economical choice for positive airflow.

HTR HEATER/DEFROSTER
- Temp. range: -40° to 225°F
- Crush-resistant
- Compressible for storage

Lightweight hose is constructed from a polypropylene wall, reinforced with polypropylene rod helix. An economical choice for air, dust, and fume applications.

1PV-EP-HM Vinyl Blower Hose with Wear Strip No. 3WB42

HI-TECH DURAVENT
Flexible Hose & Ducting

Blower Hose

Neoprene-coated polyester duct hoses are used to blow or exhaust air for dehumidification, enclosed space ventilation, portable air conditioner, preconditioned air, and general ventilation applications in foundries, municipalities, shipyards, and the aerospace and facility-service industries. These flexible hoses are flame-retardant and self-extinguishing. They also have an external vinyl-coated wear strip that protects the hose from abrasion when dragged. The hoses are highly compressible, which saves space when transporting them.

1PN-EP-HM NEOPRENE BLOWER HOSE WITH WEAR STRIP
- Operating temp. range: -40°F to 250°F

1-ply, neoprene-coated polyester fabric material with a wire helix reinforcement and an extruded external wear strip. Suitable for heavy-duty positive airflow and for use in cooling, exhaust, and heating/temporary heating applications.

Note: Hose and air mover sold separately.

1PV-EP-HM VINYL BLOWER HOSE WITH WEAR STRIP
- Operating temp. range: -20° to 180°F

Hose is compressible from 15 ft. to 11". Vinyl-on-polyester fabric construction is protected with a vulcanized wear strip. Includes sewn cuff, belt, and buckle on each end. For positive airflow applications.

1PV-EPW-HT HI-TEMP BLOWER HOSE
- Operating temp. range: -65° to 325°F
- Medium weight
- Flexible and compressible

Ideal for positive airflow applications in heating rooms, confined spaces, tents, and buildings. Durable ducting fabric uses a 100% heat-set fiberglass base substrate laminated to a specially formulated PVC alloy.

HI-TECH DURAVENT Flexible Hose & Ducting

DT-45 URETHANE Thermoplastic Polyurethane Duct Hoses for Metal Shavings

- Temp. range: -60° to 180°F
- Abrasion-resistant urethane
- Severe service applications

Hose has hard-drawn spring steel wire helical support. DT-45 hose features medium-weight, 3-ply construction to withstand higher pressure and vacuum

HI-TECH DURAVENT
Flexible Hose & Ducting

Duct Hose for Dust

These thermoplastic rubber duct hoses have heavy, thick walls. They provide excellent chemical resistance and good abrasion resistance, and they also resist moisture, ozone, and UV rays. They are used for cotton harvesting, fume removal, leaf blowing, oil-mist collecting, seeding, solvent ventilation, and general ventilation applications. These hoses are suitable for applications with a wide temperature range.

PVC Suction and Transfer Hoses

- Temp. range: 25° to 150°F
- Vacuum to 29.9" Hg
- Hardness: Shore A73
- Clear color
- 25-ft. length

Spring spiral wire reinforcement prevents collapsing and kinking, and can also be used for static dissipation. Nonmarking, nontoxic, chemical-resistant hose has a smooth interior wall that prevents product buildup. For food and water dispensing, pure water systems, coolant lines, pneumatic systems, vacuum lines, and auto wash equipment. Formulation conforms to FDA requirements.

SAINT-GOBAIN

Tygon S3™ B-44-3 and Tygon S3™ B-44-4X Tubing

- Temp. range: -32° to 165°F
- Hardness: Shore A66
- Clear color
- 50-ft. length

Tubing is taste-free, odor-free, nontoxic, and contains no BPA or phthalates. Compliant to FDA CFR Part 175.300, NSF-51, and 3-A sanitary standards.

Beverage (B-44-3)—Flexible tubing has excellent nonwetting properties for complete drainage and simple flush cleaning.

Food, Milk, and Dairy (B-44-4X)—Smooth, nonporous bore helps minimize bacterial growth. Resists harsh cleaners and commonly used sanitizers.

SAINT-GOBAIN

Tygon S3™ E-3603 Lab Tubing

- Temp. range: -51° to 165°F
- Hardness: Shore A56
- Clear color

Features excellent chemical resistance and smooth, polished inner wall construction to ease cleaning. Less permeable than rubber tubing and contains no BPA or phthalates. For use with desiccators, incubators, and as gas and drain lines in general laboratory, beverage, and food applications. EU Food Contact regulation. Meets FDA, Class IV, and NSF 51. Additional sizes available on Grainger.com®.

GA GRAINGER APPROVED

Laboratory and Chemical-Resistant PVC Tubing

- Clear color

FDA Approved; meets CFR 21 175.300.

Laboratory—Highly flexible, high-strength tubing is an excellent alternative to latex and is more cost-effective than silicone. Can be used in peristaltic pumping applications. Withstands autoclaving and repeated gamma sterilization. Ideal for medical devices and laboratory fluid systems, as well as paint, pigment, and soap dispensing.

- Temp. range: -65° to 140°F
- Hardness: Shore A55
- 50-ft. length

Chemical-Resistant—Excellent for peristaltic pumping applications and works well with barbed fittings, even with repeated use. Can be autoclaved or gas sterilized. For transferring, draining, and pumping chemicals, food products, and corrosive materials such as bleach.

- Temp. range: -65° to 160°F
- Hardness: Shore A60
- 100-ft. length

No. 2DBZ2

Versilon™ 2001 Tubing

- Temp. range: -108° to 135°F
- Hardness: Shore A69
- 50-ft. length
- Clear color

Plasticizer- and oil-free with low compression set properties of thermoset rubber, but won't dry out and crack. Longer service life with fewer tubing changes and reduced downtime. Superior flex life with peristaltic pumps. Ideal for soap and detergent dispensing, water purification, food contact, and chemical transfer applications. Meets FDA standards for food contact.

50-, 100-, and 250-ft. Polyurethane Tubing ★GA GRAINGER APPROVED

Strong, flexible tubing is 5 to 10 times more wear- and abrasion-resistant than rubber hose, and lighter weight. Use with push-to-connect fittings with no tube support. Nonmarking; resist algae growth. For air and water lines, robotics, carwash, and painting equipment.

100-, 500- and 1000-ft. Polyethylene Tubing

High-density polyethylene tubing (HDPE) is chemical-resistant, and engineered to be harder and less flexible than LDPE, with better physical and chemical properties. Withstands sterilization by boiling. Use for air, water, or chemical transfer.

No. 2DCG3

Versilon™ C-210-A and C-544-A I.B. Polyurethane Tubing

SAINT-GOBAIN

- Clear color

Designed to handle the most demanding applications, including those that require a tight bend radius. Remains flexible in subzero temperatures. Excellent abrasion and tear resistance. For fluid transfer in food and beverage, environmental, chemical processing, industrial, peristaltic pump, semiconductor processing, and similar applications. Compliant to FDA 21CFR and Reach Compliant.

C-544-A I.B.
- Temp. range: -100° to 180°F
- Hardness: Shore A85

Tough braid reinforcements handle higher working pressures and allow greater flexibility than many other reinforced urethane tubings. Ideal for abrasive and viscous slurry transfer.

C-210-A
- Temp. range: -100° to 175°F
- Hardness: Shore A82

Chemical-, oil-, grease-, solvent-, and abrasion-resistant with excellent wear properties.

50-, 250- and 500-ft. High-Strength Nylon Tubing

No. 2VKR1

- Temp. range: -60° to 200°F

High tensile strength enhances coupling retention in high-pressure, -temperature, and -vibration environments. Designed for use with machine tool systems, marine control systems, and oil/chemical process lines.

50 Ft. PFA Fluoropolymer Tubing

- Natural color
- FDA Compliant resin, USP Class V1 Compliant, ASTM D.3307-10

Nonflammable, heat-resistant tubing helps protect against damage from most chemicals and solvents. The translucent tubing features high flexibility and a nonstick surface. Use PFA tubing for semiconductor, chemical processing, life science, food and beverage, environmental, and general industrial applications.

Continental Industries, Inc. The Ultimate Connection

ENDOT

Buriable Gas Fittings and Tubing

No. 4EHG4 No. 4EHG7

TUBE FITTINGS

- Max. pressure: 125 psi
- Temp. range: -40 to 120°F

Use with PGA gas pipe, tubing, and all gas, plumbing, and propane applications. No tooling necessary. Have a permanent leak-proof joint; fully-retained gasket prevents cold flow. Meet ASTM D 2513 ASME B31.8-1995, DOT, NFPA, CSA, ICC, and IAPMO.

GAS TUBING

Underground Natural and LP Gas Tubing features polyethylene construction and is ideal for use in buried underground applications for natural gas and major components, such as propane and butane.

SAINT-GOBAIN

50-ft. Neoprene Tubing

- Temp. range: -75° to 275°F
- Hardness: Shore A61

Tubing is engineered to provide excellent resistance to heat, ozone, abrasion, and inorganic fluid. It also resists damage from UV light, and offers longer service life than neoprene, EPDM, and other general-purpose tubing. Use in food and dairy processing applications, cosmetic production, hot beverage dispensing, water purification lines, sanitization delivery, soap dispensing, and pesticide and fertilizer delivery, as well as ink and toner feed lines and chemical transfer applications. Norprene tubing is heat-sealable, and can be joined without fittings.

Thermoplastic A-60-G Tubing—Black, abrasion resistant, and compatible with cleaners and sanitizers.

Norprene® A-60-F Tubing—Burst pressure: 1:5 ratio. Meets FDA food contact, 3-A sanitary standards, NSF-51.

Norprene® A-60-FI. B.—Ozone- and UV light-resistant. Burst pressure: 1:4 ratio. Meets FDA food contact, 3-A sanitary standards, NSF-51.

Submersible Sump Pumps

- Single phase
- Nonclog impeller design

Models operate while completely underwater to cool the pump motors so they can run longer without overheating, compared to upright/pedestal sump pumps that have motors above the sump pit. All 110V models are compatible with most standard U.S. residential electrical wall outlets and have a three prong/grounded power cord plug.

Note: Float switches and control panels sold separately. Check valves are on page 2627 and PVC pipe is on page 2811. For primer and PVC cement, see page 2819.

110 Volt Cast-Iron Body—The cast-iron body helps dissipate heat as the pump operates and some models have a switch to start and stop the pump motor. The painted or powder-coated finish protects the body from corrosion.

110 Volt Plastic Body—Plastic body won't corrode. All models, except No. 3YU65 have a switch that starts and stops the pump motor.

110 Volt Stainless Steel Body—Feature a stainless-steel body that's more corrosion resistant than cast iron and have a switch that starts and stops the pump motor. Unpainted finish.

110 Volt Aluminum Body—Lightweight aluminum body provides good corrosion resistance. Pumps have PSC motors with thermal protection.

110 Volt Cast-Bronze Body—Feature a cast-bronze body that is more corrosion resistant than cast iron and have a switch that starts and stops the pump motor. Unpainted finish.

220 Volt Cast-Iron Body—Higher-voltage pumps allow for larger motors that require less current than lower-voltage motors and the cast-iron body helps dissipate heat when the pump operates. No. 5CZG4 has a switch that starts and stops the pump motor. All pumps are compatible with most 220V U.S. wall outlets and have a painted or powder-coated finish to protect the body from corrosion.

110 Volt Plastic Body No. 3YU68

110 Volt Stainless Steel Body No. 1APP1

110 Volt Aluminum Body No. 1XHV7

110 Volt Cast-Bronze Body No. 2P548

220 Volt Cast-Iron Body No. 4NW37

110 Volt Cast-Iron Body No. 2P550

Cast-Iron Body No. 4KU60

Stainless Steel Body No. 5URJ4

Cast-Bronze Body No. 4KU63

Plastic Body No. 4KU64

Pedestal Sump Pumps

- 115V
- Single phase
- Continuous-duty motors with TEFC enclosure, except Nos. 4KU60 to 4KU64 have PSC motors with ODP enclosure
- Stainless steel shaft, except No. 4KU64 is plastic

Pumps have a long rod with a float on the end to turn the switch on and off. Three prong/grounded power cord plug.

Note: A check valve is recommended, see page 2627, Additional float balls are available on page 2911. For replacement motors, see page 26.

Cast-Iron Body—Material efficiently disperses heat.

Stainless Steel Body—Offer good strength and corrosion resistance.

Cast-Bronze Body—Durable and corrosion resistant.

Plastic Body—ABS/plastic is lightweight and won't corrode.

Back-up and Primary Sump Pump Combinations

- 1½" discharge

Systems come with a battery-powered, back-up pump and often include a back-up pump and a primary pump all contained in one unit. For use in a basement sump pit and automatically sound an alarm and activate a back-up sump pump when the primary sump pump malfunctions or when the main electrical power supply fails. For indoor use only; battery sold separately.

Back-up with Primary Pump—Systems come with a battery-powered, back-up pump and a primary pump all contained in one unit. Include a primary sump pump, back-up sump pump, controller, and battery case.

Back-up without Primary Pump—Models include a back-up sump pump, controller, and battery case.

With Primary Pump
No. 49DE64

Without Primary Pump
No. 48ZJ81

Battery-Powered Back-up Sump Pumps

- Max. liquid temp.: 104°F, except No. 2RXT7 is 130°F

Provide additional hours of protection against flooding when the primary pump stops operating due to mechanical failure or an electrical power outage. They automatically start when the primary pump fails and don't require corded electrical power. Pumps are suitable for use in most sump pits and ideal for locations where electric power is unreliable. Battery is not included.

Sump Pump Batteries and Battery Acid

Batteries supply power to operate a backup pump during power outages or mechanical failures to prevent flooding or water damage.

Maintenance Free AGM—Sealed lead acid batteries don't require fluid levels to be checked and maintained, and are for use in installations where batteries won't be regularly monitored.

Wet Cell—Cost-effective power supply for applications where batteries will be regularly checked and maintained. They require filling with battery acid before installation. The acid will evaporate over time and needs to be replenished to ensure proper operation.

Battery Acid—Sulfuric acid solution must be added to new wet cell batteries prior to installation and is used to replenish acid in existing installations. The acid ships separately from a battery.

Intrinsically-Safe Sewage Ejector Pumps

- Max. liquid temp.: 104°F
- 20-ft. power cord

Feature vertical float switch actuation and a nonsparking motor that won't ignite flammable liquids. They transfer sewage containing solids and flammable liquids from drains where a gravity system won't work, such as in septic systems that are below the main sewer line. Models have no screen on the bottom of the pump and a large outlet at the top to allow debris to flow through freely. Carbon/ceramic shaft seal. For use in sump pits with a minimum 24" dia. FM Approved.

Effluent Pumps

GOULDS PUMPS · Dayton · ZOELLER PUMP COMPANY · LittleGIANT · BARNES

Use to drain treated water from septic tanks and most can drain water containing small solids. Pumps have high heads (the height a pump can lift water before there is no more flow) and high pressure, compared to sewage ejector pumps, to efficiently push treated water out to a drain field.

Note: Float switches and control panels sold separately.

1-Phase, 110 to 120 Volt—Compatible with most standard U.S. residential electrical wall outlets.

1-Phase, 200 to 240 Volt—Models use a higher voltage that allows for larger motors that require less current than lower-voltage motors.

3-Phase, 200 to 480 Volt—Feature three-phase motors that are more efficient than one phase, and they use a higher voltage that allows for larger motors that require less current than lower-voltage motors.

High-Head Filtered—Feature permanent split capacitor (PSC) motors with stainless steel shafts and hardware, long-life mechanical seals, and ball bearings. Design helps prevent problems with lockup, abrasives, and running dry. For use in wastewater treatment, liquid transfer, dewatering, and flood control in commercial and industrial systems. Nos. 2EHP2 to 2EHP4 have a removable built-in check valve.

Elevator Sump Pumps, Detection System, and Alarms

Elevator Sump Pump with Oil Sensor—Pumps drain water from elevator sump pits and transformer vaults while retaining necessary oil. They have an oil detector that identifies when oil is present. The pump only operates when water is present and stops when oil is sensed to prevent the pumping of oil into groundwater or sewage systems.

Oil Detection System and Alarms—Oil detection systems provide pump control and alarm notifications for potentially threatening water and oil levels in pumping applications. The oil water switch senses the difference between oil and water to remove water from the tank, while preventing oil from being pumped into the environment. Pump not included.

Sewage Ejector Pumps

General purpose pumps remove sewage containing solids from drains where a gravity system won't work, such as in septic systems that are below the main sewer line. They have no screen on the bottom of the pump and a large outlet at the top to allow debris to flow through freely. These sewage pump systems mount in a basin where waste collects from a drain pipe and they're turned on and off by an attached switch or control panel. The wastewater is then pumped out of the basin and up to the main sewer or septic line. The **1-phase 110 to 120V** pumps are compatible with most standard U.S. residential electrical wall outlets. The **1-phase 200 to 240V** pumps use a higher voltage that allows for larger motors that require less current than lower-voltage motors. All **3-phase** pumps are more energy efficient than one-phase models.

Note: Operating pump outside of specified range may result in pump damage and/or shortened pump life.

Sewage Ejector Pump Systems

- Max. dia. solids: 2"
- Pump discharge: 2" dia.
- Vent size: 2"

Remove sewage containing solids from drains where a gravity system won't work, such as in septic systems that are below the main sewer line. Pumps have no screen on the bottom of the pump and a large outlet at the top to allow debris to flow through freely. They are mounted in a basin where waste collects from a drain pipe and are turned on and off by an attached switch or control panel. The wastewater is then pumped out of the basin and up to the main sewer or septic line.

110 Volt with Indoor Alarm—Feature an alarm that turns on when the water rises to a preset level in the sump basin. The alarm alerts that the pump has malfunctioned or is not able to keep up with the water flow. Compatible with most standard U.S. residential electrical wall outlets.

110 Volt without Alarm—Compatible with most standard U.S. residential electrical wall outlets.

220 Volt with Indoor Alarm—Have an alarm that turns on when the water rises to a preset level in the sump basin. The alarm alerts that the pump has malfunctioned or is not able to keep up with the water flow. Pumps are compatible with most 220V U.S. wall outlets.

Sewage Grinder Pumps

General purpose pumps feature a grinding plate on the bottom that shreds large particles into small fragments so the pump inlet won't clog and the waste can be pumped into a sewage system. These models, also known as grinder pumps, are not for use with septic systems since the small particles will not be filtered out in the septic system's drain field and will contaminate the groundwater. For control panels including duplex control panels see page 2655.

1-Phase, 110 to 120 Volt—Compatible with most standard U.S. residential electrical wall outlets.

1-Phase, 200 to 240 Volt—Use a higher voltage that allows for larger motors that require less current than lower-voltage motors.

3-Phase, 200 to 480 Volt—Have 3-phase motors that are more efficient than 1-phase. Motors use a higher voltage that allows for larger motors that require less current than lower-voltage motors.

Sewage Grinder Pump Systems with Alarm

Tether float switch actuated pumps feature an alarm that turns on when water rises to a preset level in the sump basin to alert that the pump has malfunctioned or is not able to keep up with the water flow. Systems include grinder pumps, basins, pipe, control panels, and switches to turn pumps on and off. Pumps have a grinding plate on the bottom that shreds large particles into small fragments so the pump inlet won't clog and the waste can be pumped into a sewage system. Systems are not for use with septic systems since the small particles will not be filtered out in the septic system's drain field and will contaminate the groundwater. The 110V pumps are compatible with most standard U.S. residential electrical wall outlets. The 220V models use a higher voltage for larger motors that require less current than lower-voltage motors.

Dayton

Sludge Pumps

- Pump discharge: 4" dia.
- Max. liquid temp.: 140°F
- Include 20-ft. power cord

Use to transfer a mixture of fluid, usually water and pulverized solids. They are attached to a tank to drain the sludge that is noncorrosive and nonexplosive. Pumps are suitable for use in sewage treatment and industrial applications. Three-phase pumps have motors that are more efficient than one phase, and they use a higher voltage that allows for larger motors that require less current than lower-voltage motors. All models require a control panel, sold separately on page 2655.

Pump Guide Rail Systems

Allow large and heavy pumps to be installed and removed from a sump pit without having to enter the sump pit. They use a guide rail and a chain or rope to pull sump pumps up and out of the sump pit for maintenance or inspection, then lower pumps back down into the sump pit. Systems come with a guide rail that is attached to the outlet pipe at the bottom of the sump pit. An adapter is mounted on the pump's outlet and a flanged U-fitting is attached to the outlet pipe and check valve. The pump slides down the guide rails and when it reaches the bottom of the sump pit the adapter on the pump's outlet and the U-fitting on the outlet pipe come together for a proper seal.

Sink Drain Pump Systems

- **Max. dia. solids: ⅜"**

Allow for wastewater draining of sinks, tubs, and washing machines where a gravity system won't work, such as in a basement that is below the main sewer line. Pumps are connected near the area to be drained and allow automatic basin draining when the basin is full. Dayton® systems have a vertical float switch while Nos. 12F739 and 12F740 have nonclogging stainless steel impellers. Liberty Pumps® models feature a separate access cover to ease switch maintenance and a piggyback-style plug. Little Giant® pumps have thermal overload protection. Nos. 36N560 and 36N561 are preassembled while No. 4NY91 is compact for tight spaces. Zoeller® models can be installed with an internal trap to save space and have no inlet filters or screens to clean.

Sump Pump Systems

- **Max. dia. solids: ⅜", except Nos. 5CZF9 and 6JGW5 are ½", No. 4HGH7 is 2"**

Quickly remove wastewater where gravity drain lines are not available. Nos. 10V133 and 10V132 are for use in dewatering crawl spaces, basements, and where water pooling occurs. No. 4HGH7 has discharge and electrical connections on the side of the basin allowing the top of basin to be flush with ground level. Nos. 5CZF9 and 6JGW5 help eliminate water and dampness, preventing damage, odors, and mold/fungus growth. All systems include a pump, pipe, sump basin, and sump basin cover suitable for a basement sump pump installation.

ZOELLER PUMP COMPANY

Intrinsically-Safe Sewage Ejector Pumps

- Max. liquid temp.: 104°F
- 20-ft. power cord

Feature vertical float switch actuation and a nonsparking motor that won't ignite flammable liquids. They transfer sewage containing solids and flammable liquids from drains where a gravity system won't work, such as in septic systems that are below the main sewer line. Models have no screen on the bottom of the pump and a large outlet at the top to allow debris to flow through freely. Carbon/ceramic shaft seal. For use in sump pits with a minimum 24" dia. FM Approved.

SANDPIPER A WARREN RUPP, INC. BRAND ARO®

Pneumatic Utility and Dewatering Pumps

These self-priming and run-dry capable pumps operate at low speeds to handle mud, leaves, twigs, sand, sludge, trash-laden water, and soft solids without clogging or choking. They are powered by an air compressor and don't have an electric motor that produces sparks that may ignite flammable liquids. Pumps transfer moderate amounts of water on jobsites and accept an inlet hose so they don't have to be placed in the water that needs to be drained. They are self-draining to prevent damage in below-freezing weather and have a continuous automatic lubricating internal oiler and an oil-batch-lubricated shaft seal. Nos. 5VD16 and 5VD15 have a screened inlet and an adjustable impeller and impeller cover to help maintain peak performance. All models have a cast-iron, 2-vane trash-type impeller. CE Certified.

Dayton · ZOELLER PUMP COMPANY · Liberty Pumps · PRO SERIES PUMPS PHCC

Sump/Sewage Check Valves

Prevent backflow of sump disposal lines, wastewater lines, sewage lift stations, and ejector systems. They are used in combination with piston, diaphragm and metering pumps and commonly use ball check valves that combine balls and seats in the same valve body for a leak-free shutoff. For additional sizes, go to Grainger.com® and search for "sewage check valves."

Klunkless™, No. 1XHV8—A large "silencing air chamber" absorbs the clunking sound when the sump pump turns off.

Sump and Sewage Float and Diaphragm Switches

- **Normally Closed: pump up for filling applications**
- **Normally Open: pump down for dewatering applications**

Switches connect directly to the pump, or the pump's power cord is plugged into the switch to control electric power to the pump.

Note: Use only with liquids compatible with switch construction.

Tether Float—Activated by a float that is attached to the pump by a flexible tether that can be adjusted so the pump starts and stops automatically at preset levels. They require more space to operate compared to vertical float switches since the flexible tether moves in an arc as the water level rises and falls in the sump basin.

Vertical Float—Suitable for smaller-diameter sump basins since they use a float that moves a rod straight up and down to activate the switch. The switch starts and stops the pump automatically when the water reaches a preset level.

Diaphragm—Switches are activated by pressure within a diaphragm to start and stop pumps automatically when the water reaches a certain level. They have no moving parts, are compact so they take up little space, and require periodic cleaning since the diaphragm switch may get clogged with debris. Diaphragm switches connected to a tether are often adjustable so the pump will start and stop when the water reaches a desired level.

▶**Switch Accessories—**No. 45JZ57 can mount up to 4 float cables. No. 45JZ58 seals off cables coming into an enclosure. Nos. 45JZ59 to 45JZ61 can mount a float cable to PVC pipe.

Auto Dialer and High-Water Alarms

Liberty Pumps® No. 4DKK5—Automatically calls up to 4 phone numbers to send a 16-sec. recorded warning. LED display. Unit requires a 9V battery (not included) for battery backup. Indoor mounting only.

PHCC Pro Series No. 4NE49—Detects water as shallow as 1/32" and sounds alarm for up to 72 hr. on a new 9V alkaline battery (sold separately).

Little Giant® No. 4NY92—Audible and visual alarms operate on 9VDC battery backup if power fails. Includes test switch and 6-ft. 18/2 power cord. For indoor use.

Zoeller® No. 53MD94 and 2VJ64—No. 53MD94 indoor alarm has battery backup and manual shutoff. No. 2VJ64 is for indoor/outdoor use.

Liberty Pumps® No. 54TY42—NightEye™ enabled so you can connect to your wireless network and receive notifications about your system in real time. Model includes a 9V battery, compact snap-on sensor float, and 10-ft. float cord.

Portable Self-Priming Utility Pumps

Dayton · Zoeller Pump Company · Liberty Pumps · LittleGIANT

Pump repair kits for select models are sold separately.

CENTRIFUGAL PUMPS

No. 5PXY0—For irrigation, general water transfer, and other continuous-duty applications. Model has ball bearings and comes with a mechanical carbon ceramic/stainless steel/Buna N seal. Open-type impeller.

Nos. 4HEX4 and 33RW83—Use to water lawns, pump out flooded basements, and boost city water pressure. Intermittent duty with mechanical carbon/ceramic seals. No. 4HEX4 has permanently lubricated shielded ball bearings, external brush holders, and rubber feet; No. 33RW83 has ball bearings and replacement brushes.

No. 5YU12—Provides high head and high pressures to move water quickly. On/Off switch and a large hand-tightened prime plug with internal funnel design to ease priming. Ball bearings, mechanical carbon/ceramic/Buna N seals, and a stainless steel retention plate helps extend seal life by retaining water on the shaft seal. Open-type impeller.

No. 5YU12

FLEXIBLE IMPELLER PUMPS

Ideal for transferring liquids and emptying bowls, sinks, tanks, bilges, and have a dual inlet and outlet. Intermittent duty.

No. 3YU60

No. 3YU61

No. 3YU61—Pump comes with ball bearings, Buna N lip seal, and a lightweight plastic housing.

Nos. 5UXL8 to 5UXN6—Feature stainless steel shaft and ball bearings, except Nos. 5UXN4 to 5UXN6 have sleeve bearings. Each includes 2 impellers and gasket. Nos. 5UXL7 and 5UXL9 have thermally protected motors.

SPRINKLER/UTILITY CENTRIFUGAL PUMPS

Continuous duty pumps.

No. 3YU60—Use to transfer water, run multiple lawn sprinklers, or boost city water pressure. Ball bearings and mechanical carbon/ceramic/Buna N seal. Model has overload protection and an On/Off switch.

No. 4CUK6—Suitable for transferring liquids and emptying bowls, sinks, tanks, and bilges. Dual inlet and outlet. Has ball bearings, stainless steel shaft, and mechanical carbon/ceramic seal.

Electric Utility and Dewatering Pumps

Transfer moderate amounts of water on jobsites and accept an inlet hose so they don't have to be placed in the water that needs to be drained. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

110 to 120V Plug-In—Compatible with most standard U.S. residential electrical wall outlets.

200 to 240V Plug-In—Have a high voltage that allows for larger motors that require less current than lower-voltage motors.

Vehicle Battery-Powered—Powered by a vehicle battery and for use on jobsites where an electrical outlet is not available. Pumps receive battery power as long as they're connected to a vehicle's battery (using the included battery clips) and the vehicle's engine is running.

HONDA PUMPS

Engine-Driven Pumps

Powerful 4-stroke, air-cooled, overhead valve (OHV) engine runs on regular gasoline—no need to mix with oil. Easy to prime and start. Pumps are suitable for a variety of water transfer applications. Nos. 6DLY4 to 6DLY6 are designed for jobsites and applications where high-volume trash water capacity is needed.

GA GRAINGER APPROVED

Dayton

Suction Strainers and Wheel Kit

Suction Strainers—Prevent large particles of sediment, sewage, mud, or solids from entering suction port of drainage pumps. No. 1P931 has openings to fit trash and diaphragm pumps.

- 16-ga. steel with "zinc with clear" plating

Wheel Kit—Highly portable wheel kit has double ball bearings on airless tires that can't be punctured. Wide-angle handlebars are made from large-dia. metal tubing. Adjustable sliding axle system.

Note: Pump sold separately.

Portable Engine-Driven Pumps

Dayton | BANJO | TSURUMI PUMP | GA GRAINGER APPROVED

GENERAL PURPOSE

Self-priming engines run cooler and cleaner for greater fuel efficiency. Provide clean water transfer and handle solids up to ½" dia.

AGRICULTURAL

Self-prime 12 to 15 ft.

Polypropylene—With stainless steel components, replaceable volutes, and O-ring casing seals.

Cast-Iron—With 2 cast-iron nipples, gasket casing seals, steel bases, and T-handles. Mechanical seals have ceramic seats. Clog-resistant impeller.

HIGH-PRESSURE

Dayton®—With O-ring casing seals, clog-resistant single-stage impeller, cast-iron volute/diffusers, and 2 cast-iron pipe nipples. Liquid temp. range: 40° to 180°F.

DEWATERING

Compact, heavy-duty models feature a rolled steel frame that helps protect the pump and engine, and eases handling and transport.

CENTRIFUGAL PUMP HEADS

Self-priming pumps have a temp. range from 32° to 150°F.

Pump Heads have ¾" shaft. No. 21C981 is complete and ready for attachment to gasoline engine; requires straight keyed shaft. No. 21C982 has a ¾" flexible coupling. No. 21C983 has a ¾" straight shaft coupling.

Dayton | TSURUMI PUMP | GA GRAINGER APPROVED

Portable Engine-Driven Solids-Handling Pumps

Provide fast, efficient liquid transfer and dewatering. Can be used in remote locations, above or below water level.

Trash—Feature clog-resistant impellers and can easily handle water containing stones, sticks, and other solids, up to 25% by volume (including sewage and wastewater). Nos. 3P653 and 3P654 include 2 pipe nipples and a suction strainer.

Semi-Trash—Models feature clog-resistant impellers and are designed for dirtier water applications. Durable impellers are abrasive-resistant for long life and reduced maintenance. No. 3P582 includes 2 pipe nipples.

Dewatering—Designed with a silicon carbide mechanical seal for long life. Pump and engine are mounted to a cage frame on rubber vibration cushions to help buffer stress and wear.

Water Discharge Hoses

GRAINGER APPROVED

Also known as water pump discharge hoses, they can be connected to a pump to move water away from a location or source. Water discharge hoses typically lay flat when not in use and are suitable for use in construction, mining, agricultural, and industrial water-removal applications. Hoses with fittings include a gasket.

HOSE ASSEMBLIES

Hose assemblies have fittings installed on both ends for connecting the hose to compatible equipment. Bulk hoses can be cut to the desired length, and compatible hose fittings can be added to the ends of the hoses to create custom hose assemblies.

PVC Hose Assemblies with Synthetic Fabric Reinforcement—For use in low-pressure open-end water discharge service and have fittings installed on both ends for connecting the hose to compatible equipment.

PVC/Nitrile Hose Assemblies with Synthetic Yarn Reinforcement—They are fire-resistant and are suitable for pumping and water-removal in construction, mining, and agricultural applications. The hoses' tube is made from PVC and nitrile and has limited oil and chemical applications.

SBR/Natural Rubber Hose Assemblies with Polyester Jacket Reinforcement—Suitable for use in open-end water discharge with fittings installed on both ends for connecting the hose to compatible equipment.

BULK HOSES

Bulk hoses can be cut to the desired length, and compatible hose fittings can be added to the ends of the hoses to create custom hose assemblies.

Water Suction and Discharge Hoses

Continental ContiTech ★ GA GRAINGER APPROVED

For Cam and Groove Fittings, see page 2765

Have a rigid reinforcement that helps the hose keep its shape when not in use and prevents it from collapsing in suction applications. Used to vacuum (suction) or pump (discharge) water from one location to another in construction, mining, agricultural, and industrial applications. Hoses with fittings inlcude a gasket.

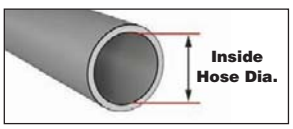
HOSE ASSEMBLIES

These hose assemblies have fittings installed on both ends for connecting the hose to compatible equipment. Bulk hoses can be cut to the desired length, and compatible hose fittings can be added to the ends of the hoses to create custom hose assemblies.

EPDM Hose Assemblies with EPDM Cover with Spiral-Plied Synthetic Fabric and Wire Helix Reinforcement—Used with engine-driven dewatering and trash pumps for transferring water from tanks, trucks, and pits or other places where water may accumulate. Suitable for medium- to heavy-duty construction, mining, agricultural, and industrial applications.

EPDM Hose Assemblies with Spiral-Plied Synthetic Fabric Reinforcement—The EPDM (ethylene propylene diene monomer) material provides excellent resistance to ozone and abrasion as well as good resistance to heat and chemicals. Suitable for use in pumping water in quarries, mines, construction sites, and other abrasive environments.

Polyethylene Hose Assemblies with Polyethylene Double Helix Reinforcement—Assemblies are for use in vacuuming or pumping water in waste-evacuation, septic-pumping, and sewer-cleaning applications.



PVC Hose Assemblies with Rigid PVC Helix Reinforcement—Suitable for use in septic-tank cleaning operations and for general industrial and agricultural applications that require a hose with mild chemical resistance.

PVC Hose Assemblies with Synthetic Braid and PVC Helix Reinforcement—Hoses feature a smooth interior that helps keep material from building up in the hose. The PVC material also provides good resistance to chemicals.

Thermoplastic Rubber Hose Assemblies with Polyethylene Helix Reinforcement—Thermoplastic rubber hoses stay flexible in cold weather and resist most chemicals used in the agricultural and sanitation industries. For use in vacuuming or pumping water in waste management, construction, agricultural, marine, and manufacturing applications.

BULK HOSES

Bulk hoses can be cut to the desired length, and compatible hose fittings can be added to the ends of the hoses to create custom hose assemblies.

BANJO CORPORATION

Barbed Combination Nipple
No. 3LZ87

Rigid Barbed Hose Fitting
No. 3DTT9

Multipurpose Barbed Hose Fittings

- Hose barb x MNPT connection

Designed for low-pressure suction and discharge service in transporting air, water, and chemicals. Threaded end is same size as hose. **Barbed combination nipples** have raised ridges (or barbs) on one end that grip the inside of hoses to hold them in place. **Rigid barbed hose fittings** connect hoses to pipe in multipurpose hose assemblies. **316 stainless steel** fittings have multiple barbs that provide a positive hose clamp seal. For fluid handling applications, including fertilizers, herbicides, acids, some solvents, liquid waste, saltwater, and cooling water. **Steel fittings** are plated to resist corrosion. **Polypropylene fittings** have chemical-resistant glass-reinforced hose barb fittings have. Can be used in fertilizer, herbicide, and insecticide handling applications, as well as for industrial applications, such as waste, saltwater, and cooling water handling.

Portable Diaphragm Pumps

Dayton

- Liquid temp. range: 40° to 180°F
- Pump fluids with abrasive solids from ⅜" to 1⅝"
- Self-priming to 25 ft.

Extra-heavy-duty pumps easily handle fluids mixed with sand, silt, mud, sewage, and waste. Integrated tubular handle and wheels offer easy mobility to pump out ponds, trenches, excavations, and septic tanks. Pumps have aluminum casing, thermoplastic rubber diaphragm, and neoprene check valves. Heavy-duty guard covers moving parts. Suction line strainer and 3" NPT suction and discharge pipe nipples included.

Electric Motor—115/230V, 8/14A, 60 Hz plug with 20-ft. power cord. Single-phase TEFC capacitor-start, capacitor-run motor. Equipped with NEMA 56C frame, ball bearings, keyed shaft, and weather-proof On/Off switch mounted on conduit box. For use in clean, dry locations only.

Gas Engine—Meets California emission codes. Features manual start, electronic ignition, and muffler for low-noise operation. For use in well-ventilated areas only.

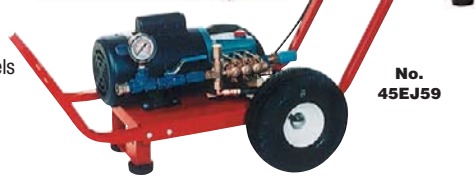
Hydrostatic Test Pumps

WHEELER REX

Hand-Operated—Lightweight and suitable for testing water lines and pressure testing boiler, solar, small tank, and sprinkler systems. Include shutoff valve and outlet hose. No. 6GDU9 has 2.6-gal. integral tank.

Pneumatic—Pumps have an automatic pressure regulator with inlet bypass and an inline strainer with stainless steel mesh filter and clear bowl. High-pressure ball valve and fittings are built-in.



Electric and Gasoline—Ideal for certifying the integrity of newly installed commercial sprinkler systems, pressure vessels, water lines, and sewer lines. Include 10-ft. pressure output hose, except Nos. 45EJ59 to 45EJ72.

Electric models have a built-in pressure regulator. Nos. 6GDV7 and 6GDV9 have a full-perimeter cage.

Gas models have an inlet strainer and a 2-wheeled cart with pneumatic wheels. Models also have an automatic bypass and quick-disconnect fittings for inlet and discharge hoses, except Nos. 45EJ64 to 45EJ72. Nos. 6GDV1 and 6GDV2 can handle a 10% chlorine solution. Include 10-ft. suction hose.

Fire Hose Testers

WHEELER REX

- Can test single or multiple lines; independently controlled
- Mounted on swivel casters for easy mobility
- Max. pressure: 500 psi
- For municipal fire hose, fire hose, and nozzles, go to pages 1817, 1818, and 1819.

Safely test fire hose lines to help prevent using damaged lines. Meet NFPA guidelines, except No. 45EJ63.

No. 1P322

Compact Submersible Centrifugal Pumps

Great for fountains, statues, water gardens, coolant systems, evaporative coolers, wet saws, and air conditioners. All pumps are continuous duty, except Nos. 2HNN9, 2HNP1 and 1P521 are intermittent duty.

Mild Corrosive Applications—Engineered thermoplastic motor housing handles water with higher mineral content. Small dimensions allow use in limited space. Nos. 2P495, 4RL01, 2P016, and 2P017 have glass-filled nylon housings and are oil filled.

Water and Mild Fluid Applications—Can be operated in open air, in-line, or submerged. No. 1P521 can pump water or machine oils when submerged, but should only be used in-line, not submerged, when pumping weak acids.

Water Applications—Pumps have epoxy-coated, cast-aluminum motor housing (except No. 1P321 is aluminum only) for added protection and oil-filled motors for extra cooling and durability.

Submersible Parts Washer Pumps

Suitable for circulating unheated Stoddard solvent, deodorized kerosenes, and other UL Classified parts-cleaning solutions. Viton® seal on stainless steel motor shaft, nylon volute and impeller, and polyethylene integral strainer, except No. 24WT11 has a nylon screen. 1/4" MNPT discharge. 6-ft., 3-conductor SJTO cord outlet. 115V, 60 Hz thermally protected motor. Metal standpipe or conduit (not included) must be attached to builder's fitting to protect cord from solvent attack or damage. Go to Grainger.com® for Coil Cleaning Kit No. 4RL09.

Polyester Housing—Pumps are epoxy encapsulated and housing is corrosion resistant. Suitable for pumping aqueous parts cleaning solutions up to 140°F, except No. 24WT11 is up to 120°F.

Die-Cast Aluminum Housing—Motor housing is unpainted. Can pump aqueous parts cleaning solutions up to 100°F.

Pond and Fountain Pumps

Corrosion-resistant materials.

POND AND WATERFALL PUMPS

Suitable for high flow, low head height, low pressure, and solids handling capability with fewer clogs. Pumps provide a high flow rate per watt for energy-efficient continuous operation, and are safe for fish and plants. Ideal for filtration systems, water courses, and waterfalls.

ABS—Continuous-duty water gardening pumps have a PSC motor in an ABS housing.

FOUNTAIN PUMPS

Suitable for high head pressure and high height clean water applications. Small fountain pumps can be used for bubbling stones, decorative, and statuary decorative fountains. Higher head pressure pumps are ideal for demanding fountain applications, larger water features, and spray nozzles. Pond Boss models have an automatic low water shut-off to help prevent pump damage.

Brass—Designed for fountains, coolant systems, evaporative coolers, masonry wet saws, and other liquid-moving applications. Continuous-duty PSC motor has thermal overload protection. Discharge rotates in 90° increments. Mechanical seal has Buna N, stainless steel and carbon/ceramic parts. Horizontal mount.

Note: Brass models are not safe for fish and plants.

Nylon, Glass Fiber—Feature a nonclogging vortex impeller and can move large volumes of water in decorative fountain, water display, and waterfall applications. Carbon, ceramic, nitrile butadiene rubber seal and 304 stainless steel screen. PSC motor is continuous-duty rated with thermal overload protection. Horizontal or vertical mount. Strainer acts as the pump stand when unit is vertically mounted.

Polypropylene—Oil-free direct-drive pumps produce greater starting torque and flow pressure for continuous operation. Innovative dual discharge for waterfall and stream effects. Noryl® impeller and nitrile shaft seal. CSA Certified.

NONSUBMERSIBLE FOUNTAIN, NORYL®

Compact size eases vertical or horizontal installation. The electronically commutated motor (ECM) is up to 40% more efficient than a standard motor, continuous-duty rated, and overload protected. Smart Pump technology provides run-dry protection. Pump operates quietly and is water-lubricated, requiring no shaft or shaft seal, with only the impeller as a moving part. Suitable for water circulation, liquid transfer, ozone treatment, and general-purpose pumping.

WATER GARDEN PUMPS

No. 13L283 features a non-clogging vortex impeller and an auto reset thermal overload to help prevent pump and motor damage. Pump can pass solids up to 1 3/16" dia.

AUTO FILL VALVE

For permanent and temporary installations to automatically maintain water levels in a skimmer vault or other pond equipment. Includes ½" PVC slip and ¾" garden hose adapters.

Pond Fountain and Aeration Systems

Kasco

- 1750 rpm for long seal life
- Saltwater compatible

Systems contain the pumps and hardware needed to enhance landscape and aquaculture ponds. Fountains add visual interest to a commercial or residential setting. Aeration helps improve water quality, keeps fish alive, and adds oxygen for overall pond health. All systems feature submerged pumps with a top water intake. 2-yr. manufacturer's warranty on ½ to 1 HP; 3-yr. manufacturer's warranty on 2 HP and larger. Lights and adapter kits are available on Grainger.com®. All models are C-ETL and UL Listed, CSA Certified.

Aerating Fountain Systems— Economical fountains are aesthetically pleasing and deliver acceptable oxygen transfer. Provide an attractive V display while aerating the water. Include float with screen, mooring ropes, power cord, and control panel. Minimum water depth for operation is 15" (38cm).

Decorative Fountain Systems— Fountains pass water through deflectors for less clogging, have 5 to 7 built-in interchangeable spray patterns, and include an assortment of nozzles. Come complete with power control center that is compatible with Fountain Lighting Systems (sold separately). Include mooring lines, float, and bottom screen. Minimum water depth for operation is 17.5" (44.5cm).

Surface Aeration Systems— They agitate high volumes of water at the water surface to create maximum air exposure and high oxygen transfer. Provide up to 3 lb./oxygen/HP/hr. into the water for commercial fish farms, retention ponds, and industrial and municipal wastewater applications. Minimum water depth for operation is 15" (38cm).

Pond Fountain Pump Systems

Dayton

Pumps operate in a minimum of 5 ft. of water and draw water from below the pond surface; a 6" PVC screen filters mosquitoes, algae, and other vegetation to improve aeration and extend motor life. All parts are plastic and stainless steel for maximum corrosion resistance. Include foam-filled flotation system and 3 nozzles for different fountain patterns. 100-ft. cord. Preassembled for simple installation.

Nos. 2VAN2 to 2VAN4 feature a lockable, rainproof control center with internally mounted ground fault interrupter, adjustable 24-hr. timers and heat shrink splice kit for the motor cable.

Fountain Lighting Systems—Stainless steel housings with clear lenses can be easily installed onto the float to create dramatic nighttime displays. Include 3 white LED flood lamps, waterproof splice kit, and mounting hardware.

12V Shower Drain System and Bilge Pumps

rule

Efficient compact pumps have run-dry capability. Plastic housing. Use in fresh or salt water.

Shower Drain System— Compact and automatic 12VDC system includes 800 gph submersible pump with strainer and mercury-free float switch, plus 1½-gal. basin. Can connect up to 3 hoses.

Automatic On-Off Bilge— Continually sense for the presence of water and need no separate float switch. Pump impeller operates for approximately 1 sec. every 2.5 min. If water is present the pump runs until all water is removed.

Nonautomatic Bilge Pumps—Require pump control switches (sold separately).

Bilge Pump Float Switches— Environmentally friendly, mercury-free switches. Turn on at 2" water level; off at ¾". Ignition protected with no battery drain. ABS plastic construction with 26"L abrasion-resistant wire leads. Nos. 2GWK5 and 2GWK7 have removable bases. No. 2GWK7 has an integral switch cover with self-test feature.

Jetted Tub, Spa, and Swimming Pool Pumps

- 115/230V
- Max. liquid temp.: 100°F
- ODP motor enclosure
- NEMA 56 frame motor
- 3450 rpm, except Nos. 5PXG1 to 5PXG3 are 3450/1725 rpm

Made from a highly corrosion-resistant blend of glass-reinforced thermoplastic.

Above-Ground Pool Pumps—Include a 4" integral hair and lint strainer.

Self-Draining Jetted Tub Pumps—Include 2 sets of each: union collar, adapter, and O-ring.

2-Speed Spa Pumps—Allow low-flow circulation for prolonged periods or for high water movement. For use in spas and hot tubs. Include 2 sets of each: union collar, adapter, and O-ring.

To convert to psi, divide total feet of head by 2.31.

Pool Filters

FILTERS

- Max. water temp.: 100°F

Easy to install and ideal for maintaining a clean and sanitary swimming pool and spa environment. Resist UV light and suitable for indoor or outdoor use.

Cartridge—For residential and commercial pools and spas, from 9000 to 65,000 gal. Easy-to-read pressure gauge.

- Max. pressure: 40 psi

Sand—Easily maintained filters for residential in-ground and above-ground pools, from 16,000 to 48,000 gal. Filter rotates 360° for easy installation. Simple lever action allows selection of valve operation. Top diffuser ensures even water distribution over the sand bed.

- Max. pressure: 28 psi, except No. 4VMP3 is 36 psi

REPLACEMENT CARTRIDGE FILTER ELEMENTS

Filter out dirt and particles, easy to clean. Even pleats allow better filtering.

Straight Centrifugal Pumps and Pedestal Pumps

- 3450 rpm motors; NEMA 56J frames
- Max. temp.: 200°F
- Max. viscosity: 100 SSU
- 4-position rotation

Pumps have continuous-duty motors for high-flow or high-head applications, with mechanical seals and side and bottom housing drain plugs. Designed for general transfer, boiler feed, condensate return, water circulation, irrigation, cooling towers, filtration, and pressure boosting.

1-phase motors are capacitor-start and have internal thermal protection. 3-phase units do not have overload protection and require a pump control box, sold separately.

Pedestal pumps can be driven by pulley or directly coupled to a motor.

HOUSING MATERIALS

Cast Iron—High-flow pumps have cast-iron housing and impellers, with Buna N, carbon, ceramic, and stainless steel mechanical seals. High-head pumps have Viton®, carbon, ceramic, and stainless steel mechanical seals.

Bronze—High-flow pumps have bronze housing and impeller, with Buna N, carbon, ceramic, and stainless steel mechanical seal. High-head pumps have bronze housing, stainless steel impeller, and Viton®, carbon, ceramic, and stainless steel mechanical seals.

Stainless Steel—Stainless steel housing and impeller, with Viton®, carbon, ceramic, and stainless steel mechanical seals.

Cast Iron, Brass Impeller—Cast-iron body with brass impeller. Seals are made from Viton®, carbon, ceramic, and stainless steel.

GOULDS WATER TECHNOLOGY

Centrifugal Pumps

- 3500 rpm TEFC motors; NEMA 56J frames
- Max. temp.: 212°

Compact design mounts horizontally or vertically to fit into tight spaces. Corrosion-resistant 316 stainless steel housing with silicon carbide, Viton®, and stainless steel seals. Casing and adapter have NPT centerline connections with easily accessible drain, prime, and vent connections with stainless steel plugs. Designed for air scrubbers, chillers, filtration, liquid transfer, pressure boosting, spray systems, and water circulation applications.

No. 6NZL6

Dayton®

High-Volume, Straight Center-Discharge Pumps

- 3-phase, except Nos. 4ZA37 and 4ZA51 are single phase
- 3450 rpm motors, except Nos. 4ZA37, and 4ZA51 are 3500 rpm
- TEFC motor enclosures

Pumps feature continuous-duty motors with enclosed impellers, 4-position port rotation, replaceable case ring, and easy-access housing drain plugs. Suitable for process applications, dewatering, irrigation, chemical transfer, decorative water features, and other industrial applications. Pumps do not have overload protection and require a pump control box, sold separately. Replacement seals are available on Grainger.com®.

Cast-Iron Wetted Materials—Cast-iron housing; bronze impeller. Seals are Buna N, stainless steel, carbon, and ceramic.

Stainless Steel Wetted Materials—Stainless steel housing and impeller. Seals are Viton®, stainless steel, carbon, and ceramic.

Naval Bronze Wetted Materials—Naval bronze housing with naval bronze impeller. Seals are stainless steel, Buna N, carbon, and ceramic.

Pedestal Pumps for Direct or Pulley Drives

Dayton®

- Max. casing pressure: 150 psi
- Max. liquid temp: 180°F (except Nos. 10X669 and 10X670 are 200°F)

Pumps are suitable for use in chemical processing, liquid transfer, pressure boosting, and circulating heated or chilled water.

Pumps operate at speeds up to 4000 rpm. Feature durable, permanently lubricated, sealed ball bearings, ¾"-dia. 316 stainless steel shaft, and Type 21 Viton® mechanical seals. Motor sold separately.

Straight Centrifugal Pumps

- Cast-iron housing, bronze impeller
- 300 series stainless steel shaft and sleeve
- Mechanical shaft seal with stainless steel, Buna N, carbon/ceramic parts
- Max. liquid temp.: 212°F (100°C)

Pumps have continuous-duty motors to handle liquid transfer, water circulation, booster service, irrigation, spray system, jockey pump, and other general-purpose pumping applications. Close-coupled design has back pull-out for easy maintenance. Vent and drain plugs in all positions. Piping is female thread (NPT), except for 3" outlets which are 12516 ANSI flat-faced flanges.

3-phase pumps do not have overload protection, which must be provided in starter units, sold separately. Pump control box sold separately.

3- to 20-HP motors: Max. case working pressure is 175 psig; max. suction pressure is 100 psig; discharge can be rotated in 90° increments. Renewable bronze wear ring. Blue baked-on electrocoat paint finish.

⅓- to 2-HP motors: Max. case working pressure is 125 psig, except as noted below; discharge can be rotated in 45° increments, except as noted below. Motors are 3500 rpm with NEMA 56J frame, except ODP No. 3CCV8 is 3500/2900 rpm, 90° increments; TEFC Nos. 49UU60, 2VRU5, 49UU50, and 2VRU1 are 3450 rpm with NEMA 143 frame, 4 position increments; and TEFC No. 3CCV7 3500/2900 rpm, 90° increments.

Note: Nos. 1N497, 53DL78, 3CCU7, and 49UU50 have a high head impeller.

No. 53DL86

GOULDS WATER TECHNOLOGY

Straight Center-Discharge Pumps

- Max. case pressure: 75 psi
- TEFC motors (Nos. 4XW69 and 4XW94 are ODP)

Continuous-duty motors and drain plugs.

WETTED MATERIALS

316 STAINLESS STEEL IMPELLER.

Cast-Iron—Seals are Buna N, stainless steel, carbon, and ceramic.

Stainless Steel—Seals are Viton®, stainless steel, carbon, and silicon carbide.

Self-Priming Pumps

- TEFC motors with 300 stainless steel motor shaft
- Max. case working pressure: 75 psi
- Max. temp.: 200°F
- Max. viscosity: 100 SSU
- Max. solids: ⅜" dia.

Close-coupled pumps self-prime to 6 ft. Feature clog-resistant open impellers, 1½" inlet/outlet ports, and drain plug. 1-phase motors have thermal overload protection.

WETTED MATERIALS

Cast-Iron—Impellers with Buna N, stainless steel, carbon, and ceramic mechanical seals.

Bronze and Stainless Steel—Stainless steel impeller. Seals are Viton®, stainless steel, carbon, and ceramic.

Self-Priming Pumps and Pedestal Pumps

No. 4UA72

Pumps with 1" NPT port self-prime to 7 ft.; pumps with 1½", 2", and 3" NPT ports self-prime to 20 ft. For high-volume industrial and commercial applications including liquid and chemical transfer.Replacement seals are available on Grainger.com®.

Cast-Iron—Mechanical seals are carbon, ceramic, and Buna N. Semiopen impellers. Stainless steel shaft, except Nos. 12N810, 12N812, and 12N814 have a steel with stainless steel shaft and built-in check valve.

Stainless Steel—Mechanical seals are carbon, ceramic, and Viton®. Semiopen impellers. Stainless steel shaft, except Nos. 12N811, 12N813, and 12N815 have a steel with stainless steel shaft and built-in check valve.

Pedestal Pumps—Seals are Buna N, stainless steel, carbon, and ceramic.

- Require 3450 rpm motors
- 1 and 2 HP models have ⅝" shaft, 3 HP model has ¾" shaft

Self-Priming Sewage and Trash Pumps

- Temp. range: 40° to 160°F
- TEFC motor enclosure

Pumps have continuous-duty motors and internal check valves to handle high volumes of liquids containing sewage and other solids, up to 8% max.; self-prime to 20 ft. They are close-coupled for simple installation and can be truck-mounted. All include a suction strainer. Nos. 12N807 to 12N809 feature a cleanout with 2 twist knobs for easy access.

Provide support to such applications as process, liquid transfer, irrigation, clear or gray water, and sewage treatment in industrial and commercial facilities. Replacement seals are available on Grainger.com®.

Self-Priming Lawn Sprinkler/Booster Pumps

No. 1N441

No. 5RWG5

- Cast-iron housings

Pumps hold prime for efficient water transfer.

DAYTON®
- Max. fluid temp.: 180°F
- Max. casing pressure: 150 psi

Feature an easy clean-out design with a front drain plug and removable, replaceable cast-iron volute/diffusers and adapters. 1-phase pumps have built-in thermal overload protection.

GOULDS
- Max. fluid temp.: 140°F
- Max. casing pressure: 125 psi

1-phase capacitor-start models have built-in overload protection with automatic reset. 3-phase units do not have overload protection and require a pump control box, sold separately.

Self-Priming Thermoplastic Pumps

No. 5RWP3

- Max. operating temp.: 140°F
- Max. suction lift: 20 ft.
- Heavy-duty TEFC, 3450 rpm motors

Fiberglass-reinforced pump bodies are specially fitted to resist seawater and saltwater. Durable and corrosion-resistant with stainless steel fasteners, inserts, and shafts. 1-phase pumps have built-in thermal overload protection.

Self-Priming Prime Line® Pumps

No. 1XLY9

- Max. fluid temp.: 160°F
- Max. solids: ¼" dia.
- Suction lift: 25 ft.
- 115/230V

All require a balanced impeller keyed to the motor shaft; replaceable silicon wear ring and shaft sleeve help extend pump life. Pull-out back and tapped connections allow easy maintenance. Required check valve (sold separately) retains liquid for fast, reliable priming and automatic repriming if suction is lost. Use in high-flow applications such as lawn irrigation, dewatering, liquid transfer, and plot irrigation.

Transfer Pumps

- Max. fluid temp.: 180°F
- Suction lift: 25 ft.
- 115/230V
- ODP, 3450 rpm motors
- NEMA 56Y mounting face
- Self-priming

Centrifugal pumps have a semi-open impeller that resists clogging. Discharge rotates in 90° increments. Mechanical seal with 304 stainless steel, Viton®, and carbon/ceramic parts. Drain plug is easily accessible. Motors are capacitor start/capacitor run, continuous duty rated, with ball bearings and stainless steel motor shafts.

Cast-Iron—Cast-iron housing and impeller. Suitable for chemical transfer; not for use with perchloroethylene or trichloroethylene.

Aluminum—Aluminum housing and impeller. Suitable for chemical transfer; not for use with perchloroethylene or trichloroethylene.

Stainless Steel—Stainless steel housing and impeller. Suitable for transferring perchloroethylene and other nonflammable liquids.

General Utility Pumps

MOYNO®

- Cast-iron housing
- Mechanical seal with carbon, ceramic, and nitrile parts
- Max. liquid temp.: 180°F
- Max. viscosity: 20,000cP

Compact pumps have a rugged design for pulsation-free transfer of slurries and fluids. Models feature a rubber stator for quieter operation. You can easily calibrate the pump since flow is consistent and proportionate to the pump speed. Allow suction lifts up to 26 ft. Ideal for transferring abrasive slurries, coatings, feed additives, industrial waste, lubricants, and swimming pool water.

High-Volume Chemical-Resistant Centrifugal Pumps and Pump Heads

- Max. case working pressure: 150 psi
- Temp. range: 40° to 200°F
- Max. viscosity: 31 SSU
- Discharge ports rotate in 90° increments

Designed for continuous-duty high-flow applications, including chemical processing, liquid transfer, cooling, and circulating. Pumps are straight centrifugal and feature a 304 stainless steel impeller and impeller nut. Other wetted materials include carbon, ceramic, and Viton®. 1-phase motors are capacitor-start, with automatic thermal reset protection and ball bearings. Pump heads require a NEMA 56J motor or 56J pump pedestal with appropriate motor.

Notes: Not recommended for trichloroethylene.

3-phase units require a pump control box, sold separately.

LittleGIANT®

Magnetic Drive Corrosives-Handling Pumps

- Max. specific gravity: 1.1
- Max. viscosity: 100 SSU

Eliminate seal-caused friction loss, wear, contamination, and leakage. All are nonsubmersible, except No. 2P875 can be used submersed or inline. Mount horizontally.

MD Series—For Mildly Corrosive Chemicals—Pumps handle mild acids and alkalis such as photographic and plating solutions. Glass-filled polypropylene pump housing and impeller. Nitrile O-ring gasket. 3-ft., 3-conductor SJT cord. No. 2P875 has epoxy-encapsulated motor for submersible use.

MD-SC Series—For Semicorrosive Chemicals—Pumps handle mild acids, mild alkalis, and saltwater. Polypropylene pump housing and impeller, nitrile O-ring gasket. Encapsulated ceramic magnet. Ceramic shaft and thrust bearings. All have 6-ft., 3-conductor SJT cords with 3-prong plugs. Open-fan-cooled motors, except No. 4RL36 has epoxy-encapsulated motor for submersible use.

MD-HC Series—For Highly Corrosive Chemicals—Pumps handle liquids such as photographic and plating solutions, acids, alkalis, brines, and distilled water. Ryton® pump housing and impeller, Viton® O-ring gasket, and encapsulated ceramic magnet. Motors have 6-ft., 3-conductor SJT cords with 3-prong plugs, except Nos. 4RL34, 4RL35, and 2P044 must be field-wired.

FINISH THOMPSON INC.

Magnetic Drive, Corrosives-Handling Pumps

- TEFC motors
- Max. temp.: 180°F (polypropylene); 220°F (PVDF)

Sealless mag-drive design eliminates the need for mechanical seals; prevents shaft leaks and reduces maintenance costs.

Polypropylene units feature polypropylene impellers and Viton® O-rings. Carbon bushings permit extended run-dry capability.

PVDF units mount horizontally and feature PVDF impellers, Viton O-rings, and PTFE bushings. Not capable of running dry.

No. 3AZN4

No. 3AZL7

No. 3AZR3

FLOODED SUCTION

Close-coupled to standard NEMA motors for installation flexibility. High-efficiency impeller design allows a smaller pump to be used in many applications. Max. viscosity: 100 cps. 5-yr. warranty.

SELF-PRIMING

Can self-prime to 25 ft. of suction lift, based upon 1.0 of specific gravity. Max. viscosity: 50 cps.

Dayton

Chemical-Resistant, Hazardous Location Pumps

- Stainless steel impeller and shaft
- Mechanical shaft seal with Viton® and carbon/ceramic parts
- Max. liquid temp.: 250°F

Pumps have a continuous-duty motor to handle liquid transfer, circulation, chemical processing, cooling, and pressure boosting applications. Discharge can be rotated 360° in 90° increments. UL Listed for Class I Groups C and D; Class II Groups E, F, and G.

No. 5WXU8

** Use "Best Efficiency gpm @ Head (ft.)" for optimum performance. † To convert to psi, divide total feet of head by 2.31.*

For more pumps, go to Grainger.com® and search for multistage booster pumps.

Booster Pump Selection Guide

(1) Determine pressure boost required above existing pressure.
(2) Determine gpm to be pumped.
(3) Read across top of specification column "GPM of Water @ Discharge Pressure in psi+" for pressure boost required.
(4) Read down column to gpm required.

Example: You have 20 psi supply. You require 40 psi at 10 gpm. Your boost requirement is 20 psi.
Read across pressure boost column to 20 psi. Read down vertical column to gallons required (10 gpm) or next larger size.
Correct pumps are Nos. 45MW68, 45MW69, 45MW85, and 45MW86.

No. 45MW84

No. 22W709

Multistage Booster Pumps

- Max. fluid temp.: 140°F
- Max. case pressure: 300 psi
- 65°C temp. rise motors
- ODP motor enclosure

Use to increase pressure from city mains, or pump water from cisterns and private ponds to ensure the proper operation of filtration equipment.

DAYTON®

The multistage design helps provide steady, quiet, and vibration-free operation. Cast-iron housing is ideal for general service, stainless steel for filtration applications. Feature an O-ring casing seal for reliable, high-pressure sealing with easy disassembly for repair or maintenance. Diffusers are glass-filled engineered composite material with a fixed impeller design and high resistance to abrasion and corrosion.

Bowls have 300 stainless steel rabbit lock for positive alignment with no gaskets needed. Mechanical seal with carbon/ceramic and Viton® parts; stainless steel spring. Pumps are self-priming to 10 ft. when the pump housing and suction line is filled with water and a foot valve is used. UL and C-UL Listed.

FLINT & WALLING®

Pumps feature continuous-duty dual-voltage motors with shielded ball bearings. Replaceable pump cartridge has 304 SS radial bearing and Noryl® and Delrin® impellers and diffusers. 1-phase units have thermally protected capacitor-start motors. Cast-iron housings feature cast-iron suction and discharge; mechanical seal uses Buna N and carbon/silicon. Stainless steel housings feature 304 SS suction and discharge. All are suitable for pressure boosting, pressure cleaning, mist systems, evaporative cooling, reverse osmosis, and water circulation. CSA Certified to UL standards for U.S. and Canada.

Pressure-Booster Pumps

- Max. case pressure: 75 psi
- TEFC motor enclosure

For boosting water pressure in a home water system. 2-stage impeller design increases pump performance. Stainless steel body and thermoplastic impellers resist corrosion. Suction lift up to 25 ft.

High-Volume Pressure Booster Pumps

Dayton®

- Max. fluid temp.: 200ºF
- Max. fluid viscosity: 31 SSU
- 65°C temp. rise motor
- ODP motor enclosure
- Cast-iron housing
- Inlet/outlet NPT: 1½" and 1¼"

Non-self-priming pumps can lift water up to 25 ft. with foot valve and pump suction line/piping filled with water. Continuous-duty motors can boost pressure for high-flow applications. 1-stage models include a discharge port on the pump housing that can be adjusted 90°. The 2- and 3-stage models are equipped for applications that require higher pressures. All pumps are UL and C-UL Listed.

Vertical Multistage Booster Pumps

Dayton®

- Max. fluid temp.: 248°F
- Max. fluid viscosity: 100 SSU
- Max. case pressure: 362 psi
- 3450 rpm with NEMA 56C frame
- TEFC motor enclosure
- Inlet/Outlet Flanged: 1¼" and 1¼"

The inline design allows pump to also be installed horizontally in locations where suction and discharge connections are in the same plane and have the same pipe sizes. Closed stainless steel impeller with silicon carbide, stainless steel, and EPDM seals. Pumps feature high-pressure performance at low flow, making them suitable for use in pressure-boosting systems, boiler feed applications, ultra filtration and reverse osmosis systems. Compact size allows installation in tight spaces. Continuous-duty motor. Flange Kits are sold separately on Grainger.com® and include a gasket, companion flange, 4 nuts, and 4 bolts. No. 21R871 is for stainless steel models, No. 21R870 is for cast-iron models. All pumps are UL and C-UL Listed.

Horizontal Multistage Booster Pumps

Dayton®

- Max. fluid temp.: 194°F
- Max. fluid viscosity: 100 SSU
- Max. case pressure: 150 psi
- 3450 rpm with NEMA 56J frame
- ODP motor enclosure, except Nos. 5UXF9 and 5UXG4 are TEFC
- Cast-iron housing

Feature continuous-duty motors for high-flow applications. Closed stainless steel impeller with carbon/ceramic, Buna N, and stainless steel seals. Pumps are not self-priming. Wet moving parts made of 304 stainless steel for longer life. Can be used with thin, clean, nonaggressive and nonexplosive liquids without solid particles or fibers. Suitable for increasing water pressure from city mains or private water systems, rinsing or spraying cooling equipment, and lawn sprinkling. UL and C-UL Listed.

Constant Pressure/Variable Speed Booster Pumps

Pumps include everything needed to maintain constant pressure in domestic water applications. Great in multibath homes, small apartments, condos, penthouses, residential irrigation systems, and restaurants. For indoor use.

3500-rpm motor in TEFC enclosure is rated for continuous duty; 50/60 Hz. Max. liquid temp.: 250°F. Stainless steel housing; seals are carbon/ceramic/rubber.

Pumps include tank and controller. Check valves, unions, ball valves, and breakers not included.

Note: Pumps need to operate at minimum gpm flow to maintain operation.

Turbine Pumps

- Liquid temp. range: -20° to 230°F
- 3450 rpm motors
- Bronze impellers
- Max. specific gravity: 1.0
- Mount on NEMA 56J frames, except 56C on 300 psi max. pressure models
- 300 psi max. pressure models handle vapors up to 20% by volume, to minimize vapor lock

Feature Type 21 mechanical seals and an easily accessible drain plug. Ball bearings on shaft for longer life. Suitable for industrial and commercial applications, boiler feed, condensation return, pressure service, water treatment, reverse osmosis filtration, spray equipment, and liquid transfer.

Notes: A suitable relief valve, such as No. 2X318 (on page 2895), should be installed to assure maximum psi is not exceeded; otherwise, electric motor/pump may be damaged.

Use only with nonflammable liquids compatible with pump materials in nonexplosive/nonflammable atmospheres.

Bronze Housing—Wetted materials are bronze, carbon, ceramic, Buna N, and stainless steel.

Cast-Iron Housing—Impellers have balancing holes to help eliminate side wear and reduce the need for external adjustments. Include cast-iron motor bracket with replacement bronze sleeve. Wetted materials are cast iron, bronze, carbon, ceramic, and Buna N.

Note: Not for use with viscous or abrasive liquids.

Convertible Well Jet Pumps

Eliminate the need to connect to a municipal water source and are for use in shallow wells (up to 25-ft. deep) or deep wells (greater than 25-ft. deep) depending on the ejectors used. Pumps are mounted above ground for repair and maintenance compared to submersible well pumps that are installed in the well and need to be removed from the well for inspection. Jet pumps are not subject to pump twisting found in submersible pumps that causes them to strike against and damage the sides of the well casing. Pumps are connected to an ejector, tank, and control panel to automatically supply water as needed.

Cast Iron—Adaptable to single-pipe shallow well or double-pipe deep well installations.

Thermoplastic—All wettable parts resist corrosives and abrasives found in most wells.

Jet Pump Ejectors

Dayton

Ejectors consist of a nozzle and a venturi attached to a compatible jet pump to create a vacuum that draws water up the well. **Shallow-well** jet pump ejectors connect to compatible shallow-well jet pumps for wells less than 25-ft. deep. The **deep-well** models connect to connect to compatible deep-well or convertible well jet pumps for wells more than 25-ft. deep. All ejectors are commonly used in residential well applications.

Jet Pump Systems

Pump systems are centrifugal end suction pumps that use a jet pump ejector to generate a vacuum which helps draw water up the well. They come with a booster tank to ensure the pump will maintain a more consistent water pressure and supply water to homes or facilities without having to connect to a municipal water source. Jet pumps are installed above ground for repair and maintenance, and they eliminate damaging pump twisting common with submersible well pumps that causes them to strike against and damage the sides of the well casing.

Submersible Deep-Well Pumps

Dayton

- Max. operating temp: 86°F, except Nos. 7YT16 to 7YT29 are 130°F

Provide a constant supply of water even during dry seasons and don't require priming since they are submerged in water. They are buried within a well deep in the ground and push water up through a pipe that is connected to one end of the pump. Models are connected to a tank to keep water pressure more consistent.

2-Wire—Require no control box since the motor controls wire directly to the water system pressure switch or power supply. Not for use where abrasives or heavy-water scale are present.

3-Wire—Require an above-ground control box (sold on page 2655) that connects between the pressure switch and pump motor. Motors have a high starting torque that can help loosen mineral deposits which may adhere to the pump's moving parts.

Submersible Deep-Well Pump Heads

- Max. operating temp.: 130°F

Stainless steel pump heads consist of a pump body and impeller (without motor) that allows replacement of a defective pump head without having to replace the existing pump motor. They must be connected to a compatible motor for proper operation in a deep well. The long, cylinder-shaped pumps provide a constant supply of water even during dry seasons and don't require priming since they are submerged in water. Pumps are buried within a well deep in the ground and push water up through a pipe to the surface and are connected to a tank to keep water pressure more consistent. They are more effective for deep wells and go down several hundred feet compared to jet pumps that have a depth of up to 120 ft. Pump heads do not include a submersible motor. Order motor separately, by horsepower, on this page.

Submersible Deep-Well Pump Motors

- Max. ambient temp.: 86°F

Deep-well pump motors can help draw water up from groundwater sources as deep as 400 ft. below the surface. They have a stainless steel shell with encapsulated, hermetically sealed stator and a splined stainless steel shaft. Lubricant-replenishing, filtered check valve and pressure-equalizing diaphragm. Replaceable lead wire assemblies include ground wire. Motors have hydrodynamic thrust bearings and CCWSE rotation. Continuous duty in 86°F water at ¼ ft. per sec. ½-HP to 2-HP models include 48" lead length; 3-HP to 7½-HP models include 100" lead length.

Flint & Walling, Inc. | Franklin Electric

1-Phase—For water systems that utilize a pressure switch. Built-in lightning protection. Capacitor-start motors require a control box, sold separately on page 2655. Automatic thermal protection on motors up to 1 HP; manual (in control box) 2 HP and higher.

3-Phase—Require motor starter and overload relay, sold separately on page 170.

Submersible Deep-Well Pumps and Control Panel Kits

- Max. operating temp.: 86°F, except Nos. 7YT18 to 7YT30 are 130°F

Control panel kits regulate the start/stop operation of submersible deep-well pumps that are buried within a well deep in the ground and push water up through a pipe that is joined to one end of the pump. The long, cylinder-shaped pumps can provide a constant supply of water even during dry seasons. They don't require priming since they are submerged in water and are connected to a tank to keep water pressure more consistent. Pumps are more effective for deep wells and can go down several hundred feet compared to jet pumps that have a depth of up to 120 ft.

Submersible Motor and Pump Control Boxes

Franklin Electric

These 1-phase Type 3R enclosures have prepunched holes for pole or wall mounting, indoors or outdoors. CSIR Control Boxes have a start capacitor, but no run capacitor. CSCR Control Boxes have both a start capacitor and a run capacitor. Easy wiring, box-type terminal lugs that accept up to #10 AWG wire on ⅓- to 1-HP boxes and up to #2 AWG wire on 1½- to 10-HP boxes. All boxes are recommended for water systems that utilize a pressure switch and safety relief valve.

CSIR (Capacitor-Start, Induction-Run)—Boxes are quick-disconnect relay-type.

CSCR (Capacitor-Start, Capacitor-Run)—Models provide greater electrical efficiency and longer pump life. Deluxe CSCR boxes contain a magnetic contactor.

Pump Control Panels

Models are wall-mounted boxes with relays, switches, and breakers for controlling the start and stop cycling of sump and sewage pumps and attached alarms. These pump control panels use wiring to connect to the pump and allow for automatic or manual pump operation depending on the application.

Well Water Tanks

Act as a reservoir to store water and keep the pressure consistent to reduce the start/stop cycling of the pump. Tanks keep the water pressure constant with an air bladder system that is precharged (a set amount of air is pumped into the bladder) when the tank is assembled at the factory or charged with an air compressor just before installation. Models without an air bladder require an air volume control to maintain air pressure for a consistent water flow. All tanks when used with pumps require a relief valve sold on page 2895.

Fiberglass Body—Rust-, dent-, and scratch-resistant high-density polyethylene composite is half the weight of steel. Base rotates 360°. Chlorine-resistant butyl air cell allows easy maintenance and will not affect water purity.

Steel Body—All-welded steel tanks have a butyl diaphragm system and are for use indoors or out. Models are for both residential and commercial water and booster systems, except Nos. 3P556, 3P556, and 3P272 are for use in domestic-use cold water applications. Tanks are coated epoxy inside, blue polyester outside.

Spring Check and Foot Valves

Prevent backflow or loss of prime.

Ductile-Iron—For use with high-flow submersible well pumps and have no leaded components.

Lead-Free and Low-Lead—Stainless steel spring and screen; nitrile seal. Lead-Free Brass Check Valves have a nonspin acetal poppet. Lead-Free Bronze Foot Valves have an Enviro-Check® body. Low-Lead Brass Check and Foot Valves have bronze seat.

PVC—Stainless steel spring and raised-radius valve seat for positive seal.

Acetal Resin Copolymer—Convert to check valves by removing the strainer; convert to check/foot valves by removing the spring. Lead-free components.

** To convert to psi, divide total feet of head by 2.31. Use "Best Efficiency GPM @ Head" for optimum performance.*

- Flange connection
- Max. temp.: 225°F, except Nos. 4YM17 and 4RD04 are 240°F

Maintain a watertight seal with pipe flanges connected to hydronic system plumbing. Designed for use in closed loop heat recovery and hydronic systems in industrial and residential applications.

No. 4RD16

No. 4RD04

No. 4JA83

** To convert to psi, divide total feet of head by 2.31. Use "Best Efficiency GPM @ Head" for optimum performance.*

No. 5JPD9

No. 5JPC3

Feature wetted surfaces that are lead free and contain not more than 0.25% of lead by weight, so pumps are suitable for use in potable water applications. Constructed of virgin lead free alloys and not recycled or post-consumer scrap alloys that may contain high levels of lead.

Taco Hydronic Circulating Pumps

- 1-phase
- Flange connection

In-line pumps are maintenance-free with a cast-iron housing and feature a removable, spring-loaded Integral Flow Check (IFC) design that prevents gravity flow and eliminates the need for a separate in-line check valve.

Suitable for hydronic heating, domestic hot water recirculation, solar thermal heating, and heat recovery systems. Pumps are not for use in potable water systems. 00 Series has motors that are impedance-protected. 2400 Series has a ½" carbon/silicon-carbide mechanical seal, permanently lubricated ball bearings with ½" stainless steel shaft. Wet rotor.

Taco Potable Water Circulating Pumps

- 1-phase
- 1-speed

Maintenance-free, in-line pumps have a low-lead bronze housing for use on open, domestic hot water recirculation systems, or a stainless steel housing for potable water systems. 00 Series has motors that are impedance-protected. 2400 Series has a ½" carbon/silicon-carbide mechanical seal, permanently lubricated ball bearings with ½" stainless steel shaft. Wet rotor. The Hot-Link® System No. 44ZD50 is for domestic hot water recirculation, and can save up to 12,000 gal. of water per year by providing instant hot water to faucets and showers. All pumps meet NSF 372 for ≤ 0.25% lead content.

No. 32UN13

No. 32UN20

Armstrong Hydronic Circulating Pumps

ARMSTRONG

Designed to pump glycol and water solutions up to 50% in domestic and light commercial closed loop hydronic heating systems. Also for use when deoxygenated or chemically treated water will pass through the pump. Cast-iron housing. Nos. 32UM80 and 32UM81 include 2 flanges.

No. 32UN20—Offers up to 70% greater energy efficiency compared to other standard circulators. Model has an automatic mode that can "learn" usage patterns over time and adjust performance for greater energy efficiency. The included integral check valve is for use in systems using hydronic zoning, and is easily removed if not needed. Includes 2 gaskets.

Armstrong Potable Water Circulating Pumps

ARMSTRONG

Suitable for use in open systems such as domestic hot water recirculation or pressure boosting, and where the use of low-lead bronze or stainless steel is desired to avoid corrosion.

No. 32UN16—Use to automatically circulate water through domestic hot water distribution pipes. Includes timer, aquastat, 2 gaskets, and 6-ft. power cord to ease installation.

Water Pressure Reducing Valves

No. 6LFA2

- Max. pressure: 125 psi
- Max. temp.: 225°F

Use to control and protect plumbing systems by reducing the downstream pressure. They decrease the psi of water entering buildings from municipal water mains to avoid ruptured pipes and damaged fixtures in commercial, industrial, or institutional facilities.

Boiler Feed Pump System and Condensate Removal Return Systems

Hoffman

- ⅓ HP
- Max. liquid temp.: 210°F
- 115/230VAC
- Motor enclosure: ODP
- ¾" NPT discharge port

Continuous-duty replacement pumps fit most heating systems. Feature cast-iron volute with bronze impeller and wear ring. Float-operated internal water makeup feeder has ½" NPT connection. Water-level gauge with protective brass rods and shutoff valves. Receiver has 2" NPT low return inlet port, 2" NPT vent line port, 2" NPT overflow port, and ½" NPT drain port. 4-bolt flange mounting.

Replacement Condensate Removal Pump

- ⅓-HP
- Motor enclosure: ODP
- ¾" NPT discharge port

Efficient pump returns condensate to the boiler in nongravity situations. Fits most systems, but may require an adapter.

WARNING: Use only with nonflammable liquids compatible with pump component materials and in nonflammable/ nonexplosive atmospheres.

PlenumPlus™ Condensate Removal Pumps

HARTELL
an Accudyne Industries brand

Use to collect and automatically remove water produced from an air conditioner evaporative coil and/or a gas-condensing furnace. Ideal for use in plenum spaces since the pump, in the event of a fire, won't distribute smoke throughout the plenum. Models feature an auxiliary safety switch and thermal overload protection. UL Recognized (Std. 2043, Third Edition).

Small Reservoir—Suitable for installation in tight spaces and include a built-in check valve.

Large Reservoir—No. 48PX14 has a rugged, cast-aluminum reservoir and maintenance-free ball bearings. Design allows you easy wire access.

Nos. 48PX15 to 48PX20 feature an inlet and discharge that rotate to ease piping and tubing installation.

Condensate Removal Pumps

LittleGIANT · Dayton · MOVINCOOL The #1 Spot Cooling Solution

- Thermal overload protection

Use where gravity drainage is not available to remove condensation in high-efficiency gas furnaces, condensing boilers, air conditioning units, and other no-gravity applications. All except Mini-Split have a 6-ft. power cord with 3-prong molded plug.

Low Profile Pumps, Small Reservoir— Compact design allows use in limited-space installations where the incoming drain line is too low for Medium Reservoir units.

Condensate Pumps, Small Reservoir— Oil-resistant tank has removable check valve; for simple service with no water spills. Rubber feet absorb vibration on hard-surface installations. Include overflow switch assembly, 20 ft. of vinyl tubing, and mounting bracket. No. 3EUD6 has a foam tank sleeve to help prevent water damage.

Condensate Pumps, Medium Reservoir— Have a high-impact polymer pump base, stainless steel shaft, and ABS plastic tank cover and switch housing. With fan-cooled motor, integral sump tank, control float, check valve, and overflow switch. All models include 20-ft of tubing except Nos. 45LV97, 2P350, 45LW07, and 2P351.

Condensate Pumps, Large Reservoir— Larger tank with galvanized steel tank cover can accommodate higher-flow drain periods or cycling. Include low-voltage overflow switch (except Nos. 45LW04, 45LW01, and 45LW05).

In-Pan Pump, Medium Reservoir— Can be used in or out of supplied tank. Molded plastic volute, impeller,

and screen. Epoxy-coated aluminum, oil-filled motor housing and a float-operated

mechanical switch.

In-Pan Pump, Large Reservoir— Larger tank with galvanized steel tank cover can accommodate higher-flow drain periods or cycling.

In-Pan Pump, No Reservoir— Can be used in or out of supplied tank. Molded plastic volute, impeller, and screen. Epoxy-coated aluminum, oil-filled motor housing and a float-operated mechanical switch.

Mini-Split Pumps, No Reservoir— Designed for wall-mount ductless mini split air conditioners. The fully automatic pump has a clear, oversize reservoir. Water-cooling jacket draws heat away from motor for quieter operation. Features an overflow shut-down switch (wiring included). Kit includes wiring cables, connecting tubes, positioning template, installation hardware, and a cover that can blend into any decor. Power cord sold separately.

Condensate Overflow Detection Switches— Switch immediately shuts unit off or activates an alarm switch if an air handling unit becomes clogged or a condensate reservoir is filled to capacity.

Auxiliary Condensate Switch No. 3XY17 has 6-ft. leads and 18 AWG wire.

Auxiliary Safety Switch No. 4NY29 Installs in drain line to detect downstream clogs and includes 6-ft. leads and 24 AWG wire.

Diaphragm Pumps—Housing Materials

Aluminum—Lightweight and can transfer paints, petroleum products, and oils.

Cast-Iron—For heavy-duty industrial applications and abrasive products.

Groundable Acetal—For use in solvent transfer. Metallic fibers in the resin renders the material conductive to eliminate static charge buildup.

Kynar®—High-performance fluoropolymer resin has good chemical resistance at higher temperatures.

Polypropylene—Resists many caustics and a wide variety of nonaggressive water-based liquids.

PVDF (Polyvinylidene Fluoride)—Low thermal conductivity and highly resistant to acids, bases, and solvents.

Stainless Steel—High corrosion and chemical resistance and ideal for use with acids, caustics, and solvents.

Dayton® Nonmetallic Air-Operated Double Diaphragm Pumps

- Self-priming to 15 ft. wet, 10 ft. dry
- Run-dry capability

Portable, intrinsically safe models resist overheating and are suitable for acids, caustics, and solvents, to high-viscosity shear sensitive liquids including paints, inks, and adhesives. Ideal for general pump transfer, recirculation, dispensing, spraying, and filling.

** Flow rate depends on air pressure and fluid viscosity. † Single = 1 inlet and outlet; Multiport = 3 inlets and 2 outlets, use only 1.*

For an explanation of diaphragm pump housing materials, see page 2663.

Sandpiper® Nonmetallic Air-Operated Double Diaphragm Pumps

- Self-priming to 15 ft. wet, 20 ft. dry
- Run-dry capability

Ideal for pumping solvents, slurries, and high-viscosity liquids such as paints and inks. Feature all-bolted construction and abrasion- and corrosion-resistant materials. Free-standing support base is useful in portable applications.

Dayton® Metallic Air-Operated Double Diaphragm Pumps

Self-priming pumps can run dry and are capable of pumping slurries, solvents, and high-viscosity liquids, such as paints and waste oils. Spring-assisted air valve has proprietary seal rings and never requires lubrication. Nos. 22A592 and 22A593 are CSA Certified for operation using natural gas.

ARO® Metallic Air-Operated Double Diaphragm Pumps

Self-priming pumps are capable of running dry and can easily handle slurries, solvents, and other high-viscosity liquids. Constructed of highly fatigue- and abrasion-resistant materials. Air-pressure air valve design helps prevent stalling.

Flap Valve—Durable, multipurpose pump features thick-hinged flap check valves and thick-wall construction for higher solids handling.

Fuel—Identical inlet/outlet manifolds allow variable, interchangeable, and reversible installation. Suitable for use with gasoline, aviation fuel, diesel fuel, fuel oil, kerosene, and water. Meet UL Specification 79.

Aluminum, Split Manifold—Designed with dual inlets to pump and blend antifreeze and water to a 50/50 mixture.

SANDPIPER
A WARREN RUPP PUMP BRAND

Sandpiper® Heavy-Duty Air-Operated Double Diaphragm Pumps

Heavy-Duty Ball Valve—Have thick-walled construction that contains up to 30% more material than similar pumps. Ideal for highly viscous and small solids-laden fluids. Bottom discharge porting helps eliminate issues caused by settling solids. Freestanding base helps ease pump rebuild.

Heavy-Duty Flap Valve—Feature hinged-flap check valves to handle abrasive slurries, suspended and unsuspended solids, and line-size solids in horizontal and vertical manifold connections. Have bottom discharge ports. Dry prime up to 24 ft. of water.

ARO®

ARO® Air-Operated Double Diaphragm Pumps—EXP Series

Provide stall-free, ice-free operation. Pumps feature Quick Dump™ exhaust valves that divert cold exhaust air from ice-prone components to help prevent freezing. Unbalanced air valve design helps avoid stalling issues associated with other pumps. Suitable for wastewater treatment, recirculating plating solutions, bulk transfer, and chemical formulation applications. Flanges are standard ANSI 150# flanges. 5-yr. manufacturer's warranty.

Dayton® Food-Grade Air-Operated Double Diaphragm Pumps

Dayton®

Can handle a variety of fluids and are designed for food ingredients, cosmetic, and pharmaceutical processes where 3A Sanitary certification is not required. Feature 316 stainless steel construction with passivated satin finish, and have FDA-compliant elastomers with sanitary clamp fittings. Built for applications requiring FDA approval.

VERSA-MATIC®

Versa-Matic® Food-Grade Air-Operated Double-Diaphragm Pumps

3A Sanitary—Feature a leak detection system, clean-in-place (CIP) design, and removable ball cages to ease cleaning. 32 ra surface finish. Models include a rotating pump stand for drainage.

FDA—Constructed of FDA-compliant materials and feature the innovative Elima-Matic® air valve system that virtually eliminates stalling, icing, and the need for lubrication. Pumps have an internal and external electro-polished finish, tri-clamp connections to ease disassembly, and nickel-plated or non-metallic chemical-resistant air sections for washdown.

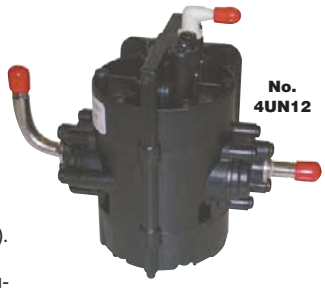
PENTAIR
SHURFLO®
LittleGIANT FLOJET

Sprayer Pumps

- Thermally protected motors (except No. 4UN19)
- Sealless design

Pumps can run dry without damage (except No. 11W067). Pressure demand switches automatically turn pumps off when the outlet is closed. Sealless design eliminates troublesome shaft seals and potential leakage into the motor.



Note: Not for use in potable water systems. Not for use with gasoline.

AIR-DRIVEN INJECTION

- Max. air inlet pressure: 60 psi
- Suction lift (wet): 25" Hg

2-chamber double-diaphragm pumps can be used for chemical transfer, soap dispensing, or to inject liquid fertilizer. Pumps operate with CO_2, nitrogen, or clean, filtered, compressed air. Performance varies with liquid viscosity.

Note: Always check for chemical compatibility of elastomers prior to installation.

No. 4UN12

NOS. 4UN55 AND 4UN56

Built-in outlet check valve prevents supply tank from draining through pump when pump is mounted up to 4 ft. below tank liquid level. UL Listed and CSA Certified.

NOS. 4UN18 TO 4UN20

Pumps come with 1 straight barb swivel fitting and one 90° elbow barb swivel fitting. Use with SHURflo® brand fittings only. UL Listed and CSA Certified.

No. 11W067

No. 4UN20

No. 2P795

NO. 2P796

Housing features port locations that can be rotated in 90° increments to simplify installation.

FILL-RITE

AC Fuel Transfer Pumps

These rotary vane, self-priming pumps let you dispense B20, diesel, E15, gasoline, and kerosene, except Nos. 32GG92, 32GG94, 32GG95, and 32GG93 are not compatible with gasoline. For use on construction sites and farms. With internal bypass valves, Viton® O-rings, heavy-duty switch, and permanently lubricated ball bearings. The permanent magnet motors can operate continuously for up to 30 min., are ntrinsically-safe, and have thermal overload protection. Models with nozzle are lockable. Pumps can be mounted to a standard 2" NPT opening with included bung adapter.

Note: Find Fill-Rite Pump Repair Kits at Grainger.com®.

DC Fuel Transfer Pumps

FILL-RITE

Self-priming, rotary vane, and allow you to dispense B20, diesel, E15, gasoline, and kerosene, except Nos. 38NH81 and 38NH82 are for biodiesel, diesel, and gasoline; No. 38NH83 is not compatible with gasoline. For use on construction sites and farms. With internal bypass valves and heavy-duty switch. Motors can operate continuously for up to 30 min., are intrinsically-safe, and thermal overload protected; except Nos. 38NH82, 38NH83, 38NH87, and 429J10 are not intrinsically-safe and have no thermal overload protection; No. 48YA42 is not thermal overload protected; Nos. 416K59 and 416K60 are not intrinsically-safe. Nos. 45KM61 to 45KM63 have reconfigureable flanges.

No. 1P894

No. 36NL24

FILL-RITE

Portable DC Fuel Transfer Pumps

Low-profile and self-priming with configurable flanges that allow you to position the inlet and outlet to fit your needs. Intrinsically-safe motor with thermal overload protection, cast-iron housing, and Buna-N seal. No. 36NL24 comes with a suction hose, discharge hose, and nozzle. No. 36NL26 comes with hose, nozzle, and bung adapter. All models include a quick connect battery cable.

Fuel Flowmeters

Inlet and outlet ports can be rotated in 90° increments to ease installation. All models are UL and C-UL Listed, except Nos. 24KJ09 and 3XNL1. Nos. 1P951 and 5P232 have nickel-plated aluminum housing and Type 303 stainless steel shaft. Nos. 3XNL1, 24KJ09, 3MMP5, 3KMR1, 4RP91, and 4RP92 have corrosion-resistant aluminum housings. All models are not for resale measuring use.

2 TO 20 GPM

Can be calibrated without dispensing fluids to measure ounces, pints, quarts, liters, or gallons to ±0.5% accuracy. Resettable totalizer counts to 1000 gal. Weatherproof.

Note: Not for use with gasoline or fluids with a flash point of 100°F or less.

5 TO 20 GPM

Resettable flowmeters with nonresettable 100,000-gal. totalizer. ±1% accuracy. Nos. 24KJ09 and 3KMR1 can be field calibrated.

Note: Do not use for liquids thicker than diesel fuel.

6 TO 40 GPM

Nos. 3XNL1, 3MMP5, 4RP92, and 5P232 measure flow to 1000 gal. ±2% accuracy. Nonresettable master totalizer: Nos. 3XNL1, 3MMP5, and 4RP92 count to 1,000,000 gal., No. 5P232 counts to 100,000 gal.

Note: Do not use for liquids thicker than diesel fuel.

Fuel Filters

Dayton® FILL-RITE

Can be used with gasoline, diesel fuel, ethanol blended gasoline (E1 to E85), and biodiesel (up to B20), except Filter Elements Nos. 40M298, 40M299, 12F729, and 12F734 are only for use with gasoline and diesel fuel, and Fill-Rite models are not for use with aviation fuel.

WARNING: Use only with liquids compatible with pump component materials.

Dayton®—Use with Fuel Transfer Pumps Nos. 4RP93 and 4FY15 on page 2670.

Fill-Rite®—Aluminum-Head Filter No. 4FY23 is for use with Transfer Pump No. 4RP93 on page 2670.

Replacement Fuel Filter Canisters and Elements—Screw onto existing filter housings. Buna N gasket.

- Filter down to 10 microns, except No. 4FY24 is 30 microns

Fuel Nozzles and Hoses

FILL-RITE LIQUIDYNAMICS Dayton®

Drum Pump Nozzles—Nos. 45NC01 to 45NC03 and 45NA99 are suitable for use in dispensing diesel exhaust fluid (DEF). All nozzles have a hang-up hook, except for Nos. 45NC01 to 45NC03, 1DLU2, and 1DLU4.

Fuel Nozzles—For use with electric fuel pumps and feature a heavy-duty, die-cast aluminum body.

Auto models have a thermoplastic and protective vinyl grip guard.

Manual Nos. 5URH3, 5URH4, and 5URH6 have a hose swivel at the inlet for greater maneuverability and ease of use. Nos. 40M288 and 40M289 have a digital meter which can measure fuel in gallons, liters, pints, and quarts.

- Include hang-up hook, except Nos. 45NC01 to 45NC03, 1DLU2, and 1DLU4.

Fuel Hose—Antistatic and can be used with gravity feed, electric- or hand-operated pumps to safely transfer flammable media.

- Max. pressure: 50 psi
- Temp. range: -22° to 130°F

Multi-Plane Hose Swivels—Permit the best flow rates and prevent fuel transfer hose from binding, twisting, and kinking during fueling.

No. 3ACA4

Oil Change Pumps and Systems

Dayton

Self-priming and feature 4000 rpm thermally protected motors.

Pumps—Plastic pumps have flexible nitrile impellers and lip seals, to provide fluid transfer with no metal-to-metal contact. ¾" MGHT input/output ports. TEFC motors, except No. 3ACA4 is ODP.

Systems—Complete with 12VDC pump and suction and discharge tubing. No. 3ACA8 includes a 4-gal. container. No. 3ACA7 includes a 3½-gal. container.

Oil Pumps

Dayton FILL-RITE

Note: For combustible-rated liquid transfer tanks, see page 753.

DAYTON®

Pumps have aluminum, cast-iron, nitrile butadiene rubber (NBR), nylon, polypropylene, PVC, steel, and zinc wetted parts for transfer of antifreeze, bulk oils, and hydraulic fluids. Internal bypass valve operates when discharge pressure exceeds bypass valve setting. Pumps can transfer viscous fluids at low temps. Thermally protected motor. Include bung, 8-ft. discharge hose with dispensing nozzle, 34" suction pipe, and 2" bung adapter for mounting pump on drums or tanks.

FILL-RITE®

Diesel—An internal bypass valve prevents the motor from stalling when the pump is running and no liquid is being dispensed. With Buna N seals. No. 4RZJ4 is a portable pump that includes an inlet strainer, hose barbs, hose clamps, battery clips, in-line fuse, and polypropylene nozzle.

Transfer—Diaphragm pumps have polypropylene, stainless steel, and Philcon wetted parts for safe transfer of heavy industrial fluids and chemicals. Dual diaphragms optimize flow rate. Adjustable outlet port for easy installation. ¼-HP permanent magnet motors have thermal overload protection. For nonpotable water applications and particulate fluids to 1/10". Include 1" x 12-ft. Buna N hose, 1" manual nozzle, and telescoping suction pipe.

Note: Not for use with gasoline or fluids with a flash point of 100°F or less.

REBUILD KIT

Allows pump No. 4RZJ4 to be quickly and easily rebuilt and repaired in the field. Includes all vanes and seals.

Grease Pumps

Westward Legacy Lincoln ARO

Hand-operated pumps are used to manually transfer or dispense high-viscosity grease from containers, drums, or self-contained reservoirs. They have few moving parts which makes pumps simple to use and maintain. They don't need to be connected to a compressed air supply making them more portable than air-powered models. Grease pumps are commonly used on farms and construction sites.

Electric Drum Pumps

Motor-driven devices are powered directly from an electrical outlet or by an internal rechargeable battery to draw fluids out of a container. They generate consistent flows at a higher rate than hand drum pumps while dispensing moderate to large amounts of fluid.

Acid, Base, and Solvent—Made with corrosion-resistant materials that withstand a range of acidic and basic chemical concentrations. They are used to dispense and transfer moderate to large volumes of substances and solutions in laboratories and chemical processing plants.

Agricultural—Typically run on DC voltage so they can be powered by farm equipment batteries for use in the field or where an electrical outlet is not available. They're commonly used when dispensing, transferring, and applying large amounts of agricultural chemicals in farming, gardening, and landscaping applications.

Automotive Fluids, Fuel, and Oil—For dispensing and transferring moderate to large volumes of fluids such as diesel fuel, coolant, washer fluid, power steering fluid, transmission fluid, and engine oil in automotive service and fleet maintenance. Pumps operate without generating sparks or may include a grounding kit to prevent the ignition of combustible vapors or liquids and allow use with fuels and other flammable fluids.

Diesel Exhaust Fluid (DEF) Electric Pump Carts—Combine a motor-driven pump and a wheeled frame for mobile dispensing and transferring of large volumes of DEF. Carts are used specifically with DEF to maintain purity when filling the reservoir of a diesel engine's Selective Catalytic Reduction (SCR) system.

Diesel Exhaust Fluid (DEF) Stationary—Used specifically with DEF to maintain purity when filling the reservoir of a diesel engine's Selective Catalytic Reduction (SCR) system. These pumps are certified to ISO standards that regulate the handling, transportation, and storage of DEF. They are used for dispensing and transferring moderate to large volumes of DEF when servicing late model vehicles and SCR-based stationary industrial systems that operate on diesel fuel.

Food and Sanitary—Comply with specific sanitary standards of the food and drug industry to minimize the risk of product contamination. They are commonly used for dispensing and transferring moderate to large volumes of syrups, juices, oils, and soaps in food, beverage, and pharmaceuticals production.

General Purpose—Designed for water transfer and pumping fluids other than food, fuels, or corrosives. They're used to dispense and transfer moderate to large volumes of fluid in general manufacturing and processing applications where a specialized pump isn't needed.

Pneumatic Drum Pumps

Allow more precise flow control than electric drum pumps and generate higher flow rates than hand drum pumps to dispense or transfer moderate to large amounts of fluid. They are powered by a compressed air supply to draw out fluids from a container and are suitable for use in facilities with air compressors or compressed air systems.

Acid, Base, and Solvent—Constructed of corrosion-resistant materials that withstand a range of acidic and basic chemical concentrations. Pumps are used to dispense and transfer moderate to large volumes of substances and solutions in laboratories and chemical processing plants.

Automotive Fluids, Fuel, and Oil—Suitable for dispensing and transferring moderate to large volumes of fluids such as diesel fuel, coolant, washer fluid, power steering fluid, transmission fluid, and engine oil. Sometimes called an air-operated oil transfer pump or a pneumatic fuel transfer pump, they are commonly used during automotive service and fleet maintenance to drain fuel tanks and remove spent fluids from vehicles and engine-powered machinery.

Diesel Exhaust Fluid (DEF)—For use with DEF to maintain purity when filling the reservoir of a diesel engine's Selective Catalytic Reduction (SCR) system. These pumps are certified to ISO standards that regulate the handling, transportation, and storage of DEF. They're typically used for dispensing and transferring moderate to large volumes of DEF when servicing late model trucks and SUVs as well as SCR-based stationary industrial systems that operate on diesel fuel.

General Purpose—Designed for water transfer and pumping fluids other than food, fuels, or corrosives. They're used to dispense and transfer moderate to large volumes of fluid in general manufacturing and processing applications where a specialized pump is not needed.

Drum Pump Motors

Used to drive the impeller of a drum pump to draw fluids out of a container. Motors typically have a threaded connection on their base for attaching a drum pump tube to form a complete pump assembly. Commonly used to replace or upgrade an existing motor and can be paired with a compatible drum pump tube to allow one motor to be used with different container types or sizes.

General Purpose No. 1DLK6

General Purpose No. 5FZV6

Pneumatic No. 3DYN8

General Purpose Electric—Draw power directly from an electrical outlet or from an internal rechargeable battery to drive the impeller of a pump. They transfer a range of nonflammable fluids in everyday environments and deliver a steady supply of power for more consistent and accurate flow rates than pneumatic motors.

Pneumatic—Operate on a compressed air supply to drive the impeller of a pump and have less risk of ignition than general purpose electric motors so they can be used with a wider range of fluids. Their air-powered design provides precise control of motor torque and operates without straining or overloading an electrical system.

Pneumatic No. 5UWF2

Drum Pump Tubes

Have a rigid intake shaft and an impeller for drawing fluid out of a container. Also called a barrel tube, these tubes attach to a pump motor and fit through the opening of a container to dip into the fluid within. The impeller rotates when driven by a pump motor to move fluid through the shaft and up to the outlet of the pump. Drum pump tubes can replace a damaged tube on an existing drum pump assembly or be paired with a separate motor to create a custom pump assembly. They can also be swapped out to adapt a drum pump for compatibility with different fluids.

Hand Drum Pumps

Allow pumping where there's no access to a power source and ideal for dispensing and transferring small amounts of fluid. These manually powered devices, sometimes called a manual or rotary drum pump, are operated by a crank, lever, or other mechanism to draw fluids out of a container.

General Purpose—General purpose hand drum pumps are designed for water transfer and pumping fluids other than food, fuels, or corrosives. They're used to dispense and transfer small volumes of fluid in general manufacturing and processing applications where a specialized pump isn't needed.

Cleaning—Manually powered devices are operated by a lever or other mechanism to dispense and transfer small volumes of soap, detergent, degreaser, wax, or other cleaning solutions used in janitorial and sanitation. They allow pumping where there's no access to a power source and include an adapter that allows the shaft of the pump to be mounted through the bung hole of a drum or other container. Pumps are made of materials that withstand the potentially corrosive effects of cleaning products.

Food and Sanitary—Comply with specific sanitary standards of the food and drug industry to minimize the risk of product contamination. Also called food grade drum pumps, they allow pumping where there's no access to a power source. Pumps are typically used to dispense and transfer small volumes of syrups, juices, oils, and soaps in food, beverage, and pharmaceuticals production.

Diesel Exhaust Fluid (DEF)—Designed for use with Diesel Exhaust Fluid (DEF) to maintain purity when filling the reservoir of a diesel engine's Selective Catalytic Reduction (SCR) system. They can draw small volumes of DEF out of a container and allow pumping where there's no access to a power source. For use when servicing late model trucks and SUVs as well as SCR-based stationary industrial systems that operate on diesel fuel.

Automotive Fluids, Fuel & Oil—Manually operated by a crank, lever, or other mechanism they allow pumping where there's no access to a power source and can dispense and transfer small volumes of fluids such as diesel fuel, coolant, washer fluid, power steering fluid, transmission fluid, and engine oil. Pumps and are commonly used during automotive service and fleet maintenance to drain fuel tanks and remove spent fluids from vehicles and engine-powered machinery.

Acid, Base, and Solvent—Operated by a lever or other mechanism to dispense and transfer small volumes of substances and solutions in laboratories and chemical processing plants. They allow fluid transfer where there's no access to a power source. Pumps have corrosion-resistant construction that withstands a range of acidic and basic chemical concentrations.

Digital Hydronic Manometers

Meters help balance hydronic heating and cooling systems and check pump performance.

No. 5LB25—Meter displays differential, high-side, and low-side pressures simultaneously, without having to change hose connections or instrument valve settings. Features a backlit display. Includes a carrying case, hose set, batteries, and an AC adapter.

No. 5LB24—Has all the same features as No. 5LB25, plus displays volumetric flow when a Cv (Kv) factor is programmed. Up to 100 Cv (Kv) factors can be entered. Meter also calculates brake power, heat flow, Cv (Kv) factors, and impeller sizing. Stores up to 1000 data points for later recall or download to a PC using the USB interface. Also includes interface cable and software.

Nos. 48GC43 to 48GC48—Feature a field-adjustable damping function that lets you choose the level of display averaging rate corresponding to the fluctuation level. Models also have a hold feature, visual and audible overpressure alarms, memory function that stores up to 40 readings, and a backlight that provides auxiliary illumination for low-light conditions.

Vertical-Mount Liquid Level Switches

These float switches mount in the top and/or bottom of a tank or vessel to actuate High/Low alarms, control relays, PLC's, or other low power devices. Encapsulated, magnetic dry contact reed switches can deliver more than 5 million switching cycles at rated electrical loads.

On select models, operation can be changed to be Normally Closed or Normally Open (dry, empty tank conditions) by removing and flipping the floats.

During installation, Adjustable Vertical models can be set lower by up to 2", or higher by up to 69".

Tethered-Mount Liquid Level Switches

Switches are designed to provide inexpensive, efficient, reliable level detection in large open vessels, water tanks, reservoirs, sumps, and ponds. A microswitch inside a molded polypropylene float detects fluid level change and generates a Start/Stop, Open/Close, or alarm actuation signal. Paddle-shape No. 2ZY80, oval-shape No. 11K185, and bulb-shape Nos. 11K187 and 11K188 have a contact rating of 16A at 250V. 6½-ft. cable, except No. 11K188 cable is 32½ ft. long.

Side-Mount Liquid Level Switches

Madison
Sensing Solutions since 1959

These encapsulated, dry contact reed switches can deliver more than 5 million switching cycles at rated electrical loads, and are suitable for controlling relays, PLC's, or other low power devices. You can set switches for High or Low alarm points, or Pump Up to Pump Down operation when mounted into the side of a vessel or tank. Also can be mounted outside of a vessel or tank using an NPT coupling, or from the inside using a bulkhead fitting (UNC/UNF) and gasket. Models with dual NPT threads are indicated in the table with the mounting thread first (outside mount). Most switches can be set Normally Open or Normally Closed by rotating them 180°.

Leak Detection and Alarm/Shutoff Systems

Madison
Sensing Solutions since 1959

- Temp. range: 14° to 112°F

Initiate an audio alarm and automatically shut off water flow when leak is detected, except Nos. 11K230 to 11K232 have an audio alarm only. Excellent for dwellings that may be unoccupied for days or weeks. 120VAC, except No. 11K230 is 9VDC. All have a 12-ft. power cord and an 8-ft. sensor cord.

No. 11K221 is for use with water tanks and water heater tanks. Nos. 11K230 and 11K231 are for use with beakers, dishwashers, frozen pipes, leaky drains, sinks, sump pumps, and tabletop containers.

FLOWLINE

Level Controllers

No. 12U422

- Temp. range: -40° to 149°F, except No. 12U422 is -40° to 158°F

Use with an ultrasonic or pressure level transmitter to provide the liquid level in a tank or sump container. Can provide local relay control, or transmit output signal to another device or controller. Easy-to-read display is simple to configure with push-button display module. Nonvolatile memory. LED display. ⅛ DIN panel mount, except No. 12U422 is 35mm DIN rail. Polycarbonate enclosure, except No. 12U422 is polypropylene. NEMA 4X (IP65) rated faceplate, except No. 12U422. Models include 4-20mA repeater, except No. 12U424.

Flow Sensors

+GF+

Nos. 5MXP5 and 5MXP6 have the widest range of flow rate and volume measurement in plastic pipes, from 1 gpm in ½" pipe to 3,100 gpm in 8" pipe. Open-cell rotor construction ensures linear, repeatable output up to 20 fps, with linearity of ±1% of full scale. 25-ft. cable is standard; transmits up to 200 ft. without amplification. Rated for 220°F at 25 psi, 70°F at 200 psi.

Nos. 5MXP7 and 5MXP8 are great for low-flow or high electronic noise applications. Insertion-type paddlewheel sensor generates an open-collector (Hall effect) pulse output proportional to flow rate as low as 0.3 fps. Designed for systems ranging in size from ½" to 8", with max. velocity of 20 fps. Feature ±1% full-range linearity and ±0.5% repeatability.

Paddlewheel Repair Kits Nos. 33Z920 and 33Z921 include paddlewheel rotor, pin, and 2 O-rings.

EchoPod® Ultrasonic Level Sensors

- Max. pressure: 30 psi
- Temp. range: 20° to 140°F

Sensors measure liquid height in a specified range, then transfer data to an external device such as a controller, indicator, PLC, or telemetry device. Great for inventory control or process monitoring. Easy to configure—without the need for an input card—using free WebCal software and included USB key fob. Narrow 2" or 3" mounting band allows use in tight spaces. Input: 24VDC (loop), except 12-24VDC/AC for No. 12U418 and 12-28VDC for 12U419. Type 6P enclosure. Corrosion-resistant PVDF (polyvinylidene fluoride) material with Viton® gasket and polycarbonate enclosure. FM Approved for U.S. and Canada. CE Certified. RoHS compliant.

No. 12U415

Multipoint Ultrasonic Level Switches

- Max. pressure: 30 psi
- Temp. range: -4° to 140°F
- Output: 4-20mA, 1 SPDT relay, 2 SPST (NO) relays

EchoSwitch® general-purpose sensors provide continuous noncontact level detection up to 26.2 ft. (8m), with 3 programmable relays for level switch or control functions and 4-20mA signal output. The sensor is programmed by an integrated push-button display module. Each relay can be configured on a single set point (high or low level alarm) or latched on 2 set points for automatic fill/empty in simplex (1 pump or valve), duplex (2 pumps), or triplex (3 pumps) level control modes with selectable time delay and fail-safe logic. Embedded level controller can reduce costs by replacing external control hardware. Noncontact sensor is excellent for corrosive, sticky, or dirty liquids, and is broadly selected for pump lift station, sump, and dry tank level applications. CE Certified. RoHS compliant.

Point Level Sensors

- Max. pressure: 150 psi at 77°F (25°C)
- Temp. range: -40° to 176°F (-40° to 80°C)
- Accuracy: ±1mm in water

Use in applications where single or multiple alarm activation points are required, such as in low-level reorder or high-level alarm. Sensors can detect dry or liquid at specific points inside a tank and signal an alarm or control a pump or valve. Compatible with controllers, devices, or PLCs that accept dry contact input. ¾" NPT. No. 12U435 has a failsafe feature that alerts when unit requires maintenance or replacement. Nos. 12U432 and 12U433 are rated intrinsically safe. Contact is SPST relay, except No. 12U434 is SPDT reed. Universal mounting for installation through top, side, or bottom of tank. Thermoplastic construction resists corrosion. Include 10-ft. cable.

DIGITAL WATER METERS

- Battery included; order replacement No. 1YEC4 on page 2683.

Display 2 totals (cumulative and batch) and rate of flow; press display button to toggle between readings. Register up to 999,999 x 100. Nos. 4TJR4 to 4TJR8 have slip-on spigot connections that fit Schedule 40 pipe and Schedule 80 fittings.

ELECTRONIC METER

- 2 AAA batteries included

For use with urea, AdBlue®, DEF, windshield fluids, water, and water-based media. Not for use with fuel and oils. Features resettable batch total and nonreset-table batch totalizer.

LUBE METER

- Batteries included

Compact, positive-displace-ment meters are designed for engine oils or transmis-sion fluids. Measure batch, reset total, and nonreset total. Oval gear rotors.

FUEL AND WATER METERS

- Mount horizontally or vertically in-line
- 2 AAA batteries included

Provide low-flow measure-ments with a resettable 4-digit electronic display.

FLOMEC™

Oval Gear Flowmeters

- FNPT connections, except Nos. 20YC27 and 20YC28 are flanged
- Nos. 20YC14 and 20YC34 provide 4-20 mA output

Rotating-gear design offers accurate low-flow readings of viscous liquids, water, oil, and chemicals. The 8 digit to 3 decimal point display can provide batch total (resettable), accumulative (non-resettable), and rate of flow. Also can provide a pulse output or a 4–20 mA signal so meter can communicate with batch controllers, data loggers, and PLC's. Display is NEMA 4.

Turbine Flowmeters/Totalizers and Accessories

FLOMEC GREAT PLAINS INDUSTRIES GPI

- FNPT connections

Self-contained units can be field serviced. Select PVDF housing for water and chemicals; aluminum for petroleum products; brass for water; and 316 stainless steel for water, petroleum products, and corrosive chemicals. For extended selection, go to Grainger.com®.

TURBINE FLOWMETERS/TOTALIZERS

Display 2 totals (cumulative and batch) and rate of flow; press display button to toggle between readings. Register up to 999,999 x 100. Read in gallons and liters. Run approximately 5 yr. on 2 lithium batteries (included).

ACCESSORIES

Display Adapter Kit— Permits horizontal reading of vertical meters.

Remote Kit Assembly— Allows remote monitoring or meter readout for high-temperature and specialized applications.

Pulse Access Module— Provides a pulse output from the meter to interface with other compatible equipment.

External Power Module— Use with Pulse Access Module No. 1YEB9 to provide meters with an external 7 to 30VDC power source.

Transmitter, 4-20mA—Transmits industry standard analog signal from meter to interface.

Battery Kit—Includes 2 batteries.

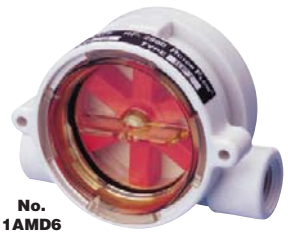
Gems Sensors & Controls

Flow Sensors, Monitors, and Indicators

TURBINE FLOW SENSORS, FT-110, FT-210, AND FT-330 SERIES



- Max. pressure: 200 psi
- Max. operating temp.: 212°F nylon, 176°F Noryl®
- 0.5% repeatability, except ±5% No. 1H256
- 24V max.
- 3-ft. cable
- Can replace dispensing timer systems

Compact, economical sensors for OEM applications that require low-flow liquid monitoring. These hall-effect turbine sensors provide accurate pulsed-output metering despite changes in system pressure caused by aging filters. Standard power and output specifications allow retrofitting to existing controllers. Max. viscosity: 32 to 81 SSU, except 32 to 70 SSU for FT-210 No. 1H256.

FT-330 Series—Designed for water and beverage dispensing applications.

- NSF 61 listed

No. 1ALZ1

No. 1AMD6

No. 1AMD9

FLOW RATE MONITORS, RFO SERIES

- Max. operating temp.: 180°F polypropylene case, 212°F brass case
- Compact panel-mount housing

High-visibility rotors and solid-state electronics provide visual confirmation of accurate flow rate pulsed output for water purification/dispensing systems and coolant systems. ¼" and ½" units include low-flow adapters for 0.1 to 1.0 and 1.5 to 12 gpm ranges, respectively. Max. viscosity: 200 SSU.

FLOW INDICATORS, RFI SERIES

- Max. operating temp.: 180°F polypropylene body, 212°F brass body
- Either port may be used for incoming flow

Bright orange rotor provides simple, direct visual flow confirmation on heat exchangers and plastic injection molding equipment. Remove bayonet mounting lens for quick cleanout. Low-flow adapter included. Max. viscosity: 200 SSU.

PULSAFEEDER

Lead-Free Brass Inline Flowmeters

No. 22UM71

- Fluid temp. range: 35° to 105°F
- Max. pressure: 150 psi
- Accuracy: ±1.5%
- 6-digit display, except No. 22UM64 is 5-digit

Mechanical flowmeters feature a multi-jet chamber to help assure accuracy over a wide range of flows with low head loss. The load is equally distributed on the impeller to help prevent wear and maintain accuracy. Ideal for use in car washes, water chlorination, water treatment in cooling tower and boiler systems, and other applications that require proportional control.

Blancett by Badger Meter

Turbine Flowmeters and Accessories

Flowmeters—Rugged construction features tungsten carbide rotor shaft for demanding industrial applications. CSA Certified.

Turbine models are compatible with corrosive or abrasive fluids; for pipelines, production/injection fields, and mining. For Blancett® 3A/Sanitary turbines, go to Grainger.com®.

- Fluid temp. range: -150° to 350°F
- Accuracy: ±1% of reading
- Repeatability: ±0.1%

Monitor Displays—Allow greater control of your flow operations and feature advanced connectivity design that lets you connect meters to your network for remote monitoring and for process automation capabilities.

Accessories—Repair Kits are designed for easy field repair of damaged flowmeters; no need to replace the entire unit. Kits are factory calibrated to help provide accurate output.

Portable Ultrasonic Flowmeters

Dynasonics by Badger Meter

Designed for quick, non-invasive troubleshooting and verifying system performance during commissioning and/or as part of a scheduled routine/audit.

DXN Flowmeter Kits—50 samples per second; full-pipe only, ANSI/Copper. Color touch screen with built-in data logger.

- Fluid temp. range: -40° to 350°F
- Accuracy: ±1% of reading
- Transit time = clean fluids
- Doppler = solid particulates and/or bubbles

UFX Doppler Flowmeter Kit—Full-pipe only. LCD display. Great for concrete slurries, dredging primary sludge, and waste-activated sludge.

- Fluid temp. range: -40° to 180°F
- Accuracy: ±2% full-scale
- 0.30 to 30.00 ft./sec. flow range

Description	Mfr. Model	Item No.
DXN Flowmeter Kits w/ Case & Clamp-On Transducers & Cables

Hybrid, Transit Time ½" to 2" and 2" to 20"; Doppler 2" to 120"	DXNP-AHS-NN	**49DE98**
Energy, Transit Time ½" to 2" and 2" to 20" with Noninvasive RTD's	DXNP-AES-NN	**49DE99**
Full, Transit Time ½" to 120"; Doppler 2" to 120" with Noninvasive RTD's & a Pipe Wall Thickness Gauge	DXNP-AFS-NN	**49DF01**
UFX Doppler Flowmeter Kit with Case, Transducer, Acoustic Couplant & 4 AA Batteries		
Hand Held, 1" Pipe and Above	DUFX1-D1	**5XPL9**

Doppler Ultrasonic Flowmeters

Dynasonics by Badger Meter

- Accuracy: ±2% full scale
- Flow velocity range: 0.15 to 30 ft./sec.

Non-invasive meters measure full-pipe flows of liquids containing suspended particles or aerated liquids such as sewage, mud slurries, and plastics.

DFX Flowmeter Systems—Systems include transmitter and transducer.

- Ambient temp. range: -40° to 185°F

DFX Flowmeter Transmitters—Each transmitter allows up to 4 meters to be interconnected.

- Ambient temp. range: -40° to 185°F

No. 5XPN0

Flowmeter Transducers—Suitable for most plastic and metal pipes.

- Ambient temp. range: -40° to 194°F

No. 5XPN2

Power Source	Includes	Mfr. Model	Item No.

No. 49DE94

Dynasonics by Badger Meter

Transit Time Ultrasonic Flowmeters

Design provides non-invasive, bi-directional, clean liquid measurement with full pipe. Use to measure clean fluids with small amounts of suspended solids or aeration in energy monitoring, HVAC, power generation, and water treatment applications. Totalizer options include forward, reverse, and net total. 4-button keypad.

TFX Flowmeter Remote-Mount Transmitters—Clamp-on meters require Transducer No. 49DE94, sold separately.

- Accuracy: ±1% of reading

DTTR Transducer—Strap-on transducer is mounted and wired directly to the remote-mounted TFX transmitter.

- Fluid temp. range: -40° to 250°F
- NEMA 6/IP67

Impeller by Badger Meter

Transmitters and Flowmeters

For use in water/wastewater treatment, irrigation, industrial, and HVAC/building automation applications.

Flow Transmitters—Can receive sensor data and convert it to the desired output that represents the flow rate.

BTU/Flowmeters—Measure flow and temperature differential to compute energy in hot service applications. Output is scaled pulse and RS-485 (Modbus and BACnet).

- Fluid temp. range: 20° to 260°F
- Accuracy: ±2%

No. 49DF12

No. 49DF19

Brass Flowmeters—Each sensor comes with 20-ft., 2-conductor 20 AWG shielded UL type PTLC 221°F (105°C) cable.

- Fluid temp. range: 0° to 221°F
- Accuracy: ±1

Stainless Steel Insertion Flowmeters—Suitable for use in flow control and batch type applications.

- Fluid temp. range: 14° to 150°F
- Accuracy: ±1%

BROOKS® INSTRUMENT

Acrylic Variable-Area Flowmeters

- Max. operating pressure: 100 psi
- Max. operating temp.: 150°F
- Max. viscosity: 16.4 CST

Clear acrylic meters have stable, easy-to-read floats with English or metric scales. They are integral-valved to permit individual flow control in air-sampling equipment, desalinization equipment, medical systems, water treatment and distribution systems, swimming pools, and aquaculture systems. Back-mounted meters (see Model-Accuracy-Dimensions chart) have standard 10-32 brass inserts for quick installation.

Air and Liquid Flow Switches

McDonnell & Miller
a xylem brand

- Single-pole, double-throw snap switch
- Sensitivity flow adjustment screw
- 120/240VAC operation
- Full load amps: 7.4 at 115V, 3.7 at 230V

Additional flow range information is available on Grainger.com®, or call 1-800-GRAINGER (472-4643).

Air Flow General-Purpose—For applications with medium- and high-velocity requirements. Paddle fits 8" minimum duct size (trim to fit 6" duct). Sensitivity flow adjustment screw.

Liquid Flow General-Purpose—Start or stop electrically operated equipment such as signal lights, alarms, motors, automatic burners, and metering devices. Nos. 2RUL3 and 2RUL4 have 4 stainless steel paddles that fit 1", 2", 3", and 6" pipe; paddle can be trimmed to fit incremental pipe sizes.

Liquid Flow High-Sensitivity—For heavy-duty applications that need instant switching such as water treatment systems, electronic circuit cooling systems, compressors, booster pumps, and bearings.

Liquid Flow Industrial/ Heavy-Duty—Designed for large pipe applications, including heating and hydronic systems, air conditioning, refrigeration, and process work. Paddles can be trimmed to suit. Fit 2" to 16" pipe with flow rates up to 998 gpm.

Paddle Kits—Designed to replace damaged paddles and return flow switches to original flow-sensing capability.

Adjustable Diaphragm Pumps

- Self-priming
- Max. viscosity: 1000cP
- 115V

Adjustable single-head metering pumps have a double-ball check valve and leak-free sealless liquid end. Powered by a high-quality fin-cooled solenoid. Wetted parts: PTFE-faced CSPE diaphragm, ABS body, ceramic ball, PTFE seals and O-rings, and PVC/polyethylene tubing. Each includes foot valve/strainer assembly, backpressure injection valve assembly, 4-ft. suction tubing, 8-ft. discharge tubing, and 4-ft. bleed valve tubing. Models with PVDF construction are NSF 61 compliant.

A Plus Series—Allow you to adjust the stroke length and stroke rate. Pumps are internally dampened to reduce noise and are water-resistant for outdoor use.

C Series—Manual control lets you adjust the stroke length. Models are internally dampened to help reduce noise.

E Plus Series—Feature Off/Manual selector switch, indicator lights, and built in circuit protection.

MP Series—Pumps have automatic control, fully scalable 4-20mADC, 20-4mADC, or external pacing. Relay output and stop input. 16-character LCD is programmable in 4 languages.

Note: Tubing is ⅜" O.D. for Max. Flow to 44 gpd, ½" O.D. for Max. Flow 96 gpd and higher.

Replacement 5-Function Valves—Easy-to-install, corrosion-resistant valves have a chemical-resistant wetted end, with recessed screws.

Adjustable- and Fixed-Rate Peristaltic Metering Pumps

- Self-priming to 24 ft.
- 115VAC

Have chemical-resistant Norprene® tubing and PVC fittings for flow up to 300cP, even with outgassing (offgassing) liquids. Rugged ABS enclosure, control cover, and rain shield that allows for horizontal/vertical mounting. PVC head assembly has toolless design, and a jog mode for tubing changes. Include suction strainer, 15 ft. of ¼" PE suction and discharge tubing, injection quill with 7 psi backpressure, and extra pump tube. ¼" MNPT PVC fitting eases connection to piped systems. Replacement tube assemblies are available on Grainger.com®. ETL Listed to U.S., Canadian, and CE standards. NSF 61 Approved.

Adjustable-Rate—A timing circuit is adjustable in 1% increments from 5% to 100% of rated flow for a 20:1 turndown ratio. No mechanical adjustment components to wear out.

Variable-Speed—Microprocessor control with LCD allows manual or automatic output adjustment with a 4-20mA signal. 100:1 turndown ratio.

Multipurpose Peristaltic Metering Pumps

- Self-priming to 15 ft.
- 120VAC

Nonclogging, adjustable output, valveless pumps are chemical- and corrosion-resistant and for use with off-gassing chemicals such as hydrogen peroxide and chlorine. Compatible with liquid chlorine, weak acids, detergents, polymers, and wetting agents. Polycarbonate head, Norprene® peristaltic tubing, PVC injection fitting, polypropylene strainer with weight, and 15-ft. polyethylene tubing. Max. viscosity: 300cP.

VSP Series, Variable Speed—Adjust output via an internal knob that varies the motor speed. Adjustable from 13 to 100% of rated capacity. 8:1 turndown ratio.

Dolphin Series, 10-Min. Cycle Time—Adjust output via a solid state current interrupter that cycles power On and Off. Adjustable from 10 to 100% of rated capacity. 10:1 turndown ratio.

Replacement Tubes—Include 9"L Norprene tubing (diameter varies).

Chemical Metering Pumps

- Self-priming to 4 ft.
- 115VAC

Compact, chemical-resistant pumps provide dependable metering performance. Degassing models have a degassing valve for use in off-gassing chemicals. All models have a sealed gearbox and eccentric cam for reliable dosing, easy flow rate control and turndown. Motorized-diaphragm technology provides long life even with continuous-duty cycles. 10:1 turndown ratio. PVC/polyethylene tubing with CSPE diaphragm, seals, and O-rings, except degassing models are hypalon. Max. viscosity: 300 cps, except 20 cps for degassing models. Include injection back pressure valve, bleed valve, foot valve strainer with weight, and tubing. ETL Listed.

Peristaltic Metering Pumps

STENNER PUMPS

- Self-priming to 25 ft.
- Reproducibility: ±2%
- 120V

For injecting solutions into commercial swimming pools, spas, well water, municipal/industrial waste water, cooling tower/boiler water treatment, animal health, and various industrial water processing applications. Wet-end materials include Santoprene™, PVC, polypropylene, and polyethylene. Max. viscosity: 300cP. Include 20-ft. polyethylene tubing, spare tube, weighted strainer, and injection check valve (100 psi models) or injection fitting (25 psi models). UL Listed, CSA Certified, and conform to ANSI/NSF STD61. Adjustable and fixed rate pumps tested by ETL to conform to ANSI/NSF STD50.

Adjustable-Rate—Feed rate control adjusts from 5% to 100%. Snap-fit components ease disassembly/service. 20:1 turn down ratio.

Fixed-Rate—Can be used with ORP/pH controllers and with proportional metering systems. Include 20-ft. polyethylene tubing, 3 ferrules, 3 connecting nuts, weighted strainer, injector fitting, and spare tube.

Variable-Speed—Digital interface with multiple operation modes, plus analog and digital inputs/outputs with advanced programming, control, and construction. Have tube leak detection, brushless DC motor, and NEMA 4X rating. 100:1 turn down ratio.

Quick-Pro Pump Assemblies—Polycarbonate head with collapsible roller design permits quick, easy tool-free tube change. ¼" tubing connection. 1-pc. peristaltic pump tube construction for greater durability and long life.

Service Kits/Tubing—No. 4VZG8 provides a visual confirmation that fluid is pumping when used with ¼" O.D. polyethylene discharge tubing.

No. 4VZG9 has 4 settings to operate pump when used in conjunction with a dry contact water meter.

Chemical Solution Tanks—Translucent polyethylene tanks have a large fill opening, spill containment basin, and level indicators. Include mounting hardware. Compatible with all single-head Stenner® pump models.

Tank Mixers—Encapsulated impeller design enhances safety and eliminates dead spots around tank perimeter. For applications that mix powdered or granular solids into aqueous solutions or viscous liquids. Must be used with matching size Stenner tank. Tank-mounted and secured with safety screws. 6-ft. power cord. Rated for indoor use only. Not for swimming pool or marine use. UL and C-UL Listed.

- Max 3600 rpm
- 1/30-HP motor; 115V/60Hz

General Purpose Metering Pumps

STENNER PUMPS

- Self-priming to 25 ft.
- 120VAC, except Nos. 481H74 and 481H75 are 115VAC

Compact, adjustable, and feature an innovative "Quick-Release" head for simple and fast tube change. Santoprene™ peristaltic tubing is FDA-approved and requires no adjustment or lubrication. Ideal for light-duty applications such as injecting chlorine, weak acids, and alkaline solutions. Max. viscosity: 100cP. Accessories included. Pump Tube Replacement Kits include 2 Santoprene tubes and 4 ferrules. Pumps are UL and C-UL Listed.

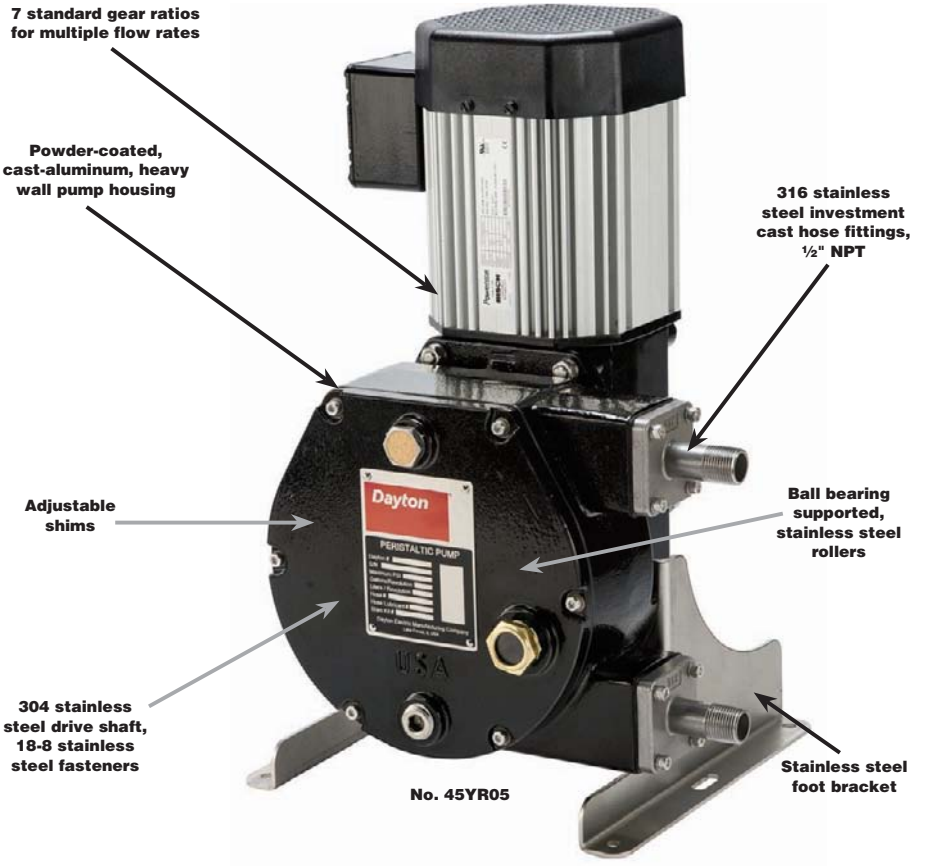
Peristaltic Livestock Medicator Pumps

STENNER PUMPS



- Self-priming up to 25 ft.
- 1:128 injection ratio
- 120V

Suitable for injecting solutions such as disinfectants, medications, nutrients, and sanitizers into water for treating livestock. Injection is directly into the water line so the solution does not contact any moving parts and avoids fouling and water flow restrictions. Polycarbonate body with Buna N seals and O-rings. Pumps have adjustable pulse rate settings and can connect to an existing pulse water meter. No. 33TH67 includes 3 connecting nuts, 3 ferrules, injection check valve, weighted suction line strainer, 20-ft. Santoprene™ tubing, and spare pump tube.

Peristaltic Chemical Metering Pumps

- Max. pressure: 125 psi
- Self-priming to 30 ft.

Durable, cast-aluminum pumps can handle abrasive slurries and aggressive chemicals in most metering, dosing, and transfer applications. No moving parts come into contact with the chemical being metered. Feature stainless steel rollers supported by sealed ball bearings that compress the hose in a more efficient design than frictional shoe-type pumps. Models are positive displacement-style that require no valves to operate and have a stainless steel drive shaft, foot bracket, hardware, and hose fittings for long life. The premium, heat-treated and ground hypoid gearing provides greater efficiency and more reliable performance. The gear motor includes a hollow shaft that allows you to remove the roller assembly if required. Pumps are reversible and can be used to clear blocked lines. Include shim kit and hose lubricant. Hardwired installation required. UL and C-UL Listed, CE Certified.

WARNING: Use only with nonflammable liquids compatible with pump component materials and in nonflammable/nonexplosive atmospheres.

Plastic-Body Permanent Magnet Circulator Pumps

- 1-phase
- 60/50 Hz, continuous-duty motor

Small footprint and lightweight construction allow easy installation for water circulation and liquid transfer. Semiopen impeller. Ceramic bearing system. Each includes a 4-ft. power cord.

NORYL®

Have a shaftless, sealless electronically commutated motor (ECM). Energy-efficient ECM/permanent magnet technology saves up to 68% on electricity. Noryl impeller. Nos. 5JKG2 and 5JKG6 max. working pressure: 50 psi; 100-240V. No. 5JKF8 max. working pressure: 29 psi; 115V.

NORYL/ALUMINUM

Pump motor has a stainless steel shaft and screw, with EPDM O-ring seal. Nylon and 316 stainless steel impeller. Max. working pressure: 29 psi. 115V.

Electric-Operated Diaphragm Pumps

FLOJET

- Polypropylene housing
- Sealed motor with run-dry capability

12VDC, WATER-BASED

Permanent magnet ball-bearing motors.

Automatic Demand Pumps—Max. water temp.: 160°F. Meet U.S. Coast Guard (USCG) electrical standards.

Complete Water System—Includes pump and precharged 1-gal. pressurized bladder tank with air valve. FDA-approved materials.

Washdown Pump—Meets USC electrical standards.

Water System Pump—NSF Certified for potable water.

Water System Pump with Valve—Features quick-disconnect plug-in ports, built-in bypass valve, and pressure switch.

12VDC, PETROLEUM-BASED

Suitable for liquid transfer, dewatering circulation, oil changing (warm), and diesel fuel transfer. Meet USCG, ISO 8846 for diesel fuel transfer.

115VAC, WATER- AND PETROLEUM-BASED

Sealed pressure demand switch. UL Listed, UL Recognized, CSA Certified.

INLINE STRAINERS

Recommended for freshwater applications.

Centrifugal and Positive Displacement Pumps

Dayton® MEZIERE INDUSTRIAL

Dayton®, Centrifugal—Pumps are suitable for use in liquid transfer and irrigation. They have semiopen impellers and are not self-priming, except No. 5PXX5 is self-priming up to 4.5 ft.

Ports for Nos. 5PXW8 to 5PXX1 and 5PXX4 can be rotated in 180° increments, No. 5PXX5 in 90° increments. No. 5PXX3 has a totally enclosed fan-cooled (TEFC), capacitor-start induction motor.

- Intermittent duty, except No. 5PXX3 is continuous
- ⅛ HP

Meziere, Centrifugal and Positive Displacement—Centrifugal models are suitable for use with 50% water/glycol mix. Designed to provide high flow at low head pressure. Brush motor is housed in open dripproof (ODP) enclosure.

No. 21C949 Positive Displacement Pump has a preset pressure relief valve, steel gerotor, and double-lip seal. Suitable for use with Dexron® II or equivalent oil.

- Continuous duty
- 5⁄16 HP, except No. 21C952 is ⅕ HP

No. 5PXX0

Dayton

Coolant Pumps

- 3450 rpm motors
- Cast-iron bodies and volutes

Circulate coolant and spray cutting oil. Replacement filters on Grainger.com®, search for coolant pump filters and cartridges.

SUCTION

Mount above liquid level in all locations. Pumps require initial priming. Feature mechanical seals with carbon/ceramic shaft seal, Buna N elastomers, and steel springs. For all types of machines, except grinders.

Fuji—For use with cutting oil only. Install where ambient temp. range is -0°C to 40°C. For indoor use only.
- Max. fluid temp.: 104°F
- Max. viscosity: 340 SSU
- Max. suction lift: 2.3 ft.

Dayton®—Mount pump upright only. Pump motor is not designed for immersion in liquid.
- Max. fluid temp.: 180°F
- Max. viscosity: 500 SSU
- Max. suction lift: 2 ft.

IMMERSION
- No bearings, seals, or packing
- Have outlets only

Ideal for pumping liquids with fine contaminants and can be run dry. For all types of machines, including grinders, and for applications with higher temperatures.

Fuji—For use with cutting oil only. Install where ambient temp. range is -20°C to 40°C.
- Max. fluid temp.: 200°F
- Max. viscosity: 683 SSU

Dayton®—Pump motor is not suitable for immersion in liquid. Mount pump upright only.
- Max. fluid temp.: 180°F
- Max. viscosity: 500 SSU

Machine Coolant Tanks and Pump/ Tank Combinations

For use on small drill presses, tool grinders, tapping machines, cut-off saws, and small lathes.

Tanks—Include chip collector baffle, flex nozzle, and brass control valve. 5-gal. tank is polyethylene and includes 6-ft. plastic hose. 10-gal. tank is steel and has 4-ft. neoprene hose with brass nuts and deflector plate. Pump not included.

Polyethylene Pump/Tank Combinations—Flexible discharge hose has flow control valve. Removable screen and chip collector.
- Max. temp.: 120°F

Intermittent-Duty Roller Pumps

- 4-roller models are coupled to a 12VDC motor
- Self-priming suction lift up to 3-ft. head
- Max. fluid temp.: 140°F
- ¾" FNPT inlet and outlet side ports

Pumps are designed for agricultural and lawn/garden chemical spraying, as well as various chemical transfer applications with nonflammable liquids, such as liquid fertilizers, insecticides, herbicides, and soil fumigants. They won't swell in water and they maintain performance with chemical carriers such as xylene. Counterclockwise pump rotation (facing pump shaft) can be easily reversed for gas engine drivers. (Gas engines must be gear-reduced or belt-driven down to desired pump speed.) Ni-Resist alloy offers better corrosion resistance than cast iron, while SilverCast™ custom alloy provides corrosion resistance with harsh chemicals such as herbicides.

All pumps have Super Rollers, Viton® shaft seals, and double-sealed, heavy-duty ball bearings. 4-roller models also include drivers. 6- and 8-roller models adapt to tractor power take-offs. Nos. 3YB55 and 3YB56 have polypropylene rollers. PTO quick couplings are sold separately on Grainger.com®.

High-Pressure Triplex Pumps

- Max. fluid temp: 140°F
- Concentric ceramic plungers
- Continuously lubricated seals

Suitable for high-pressure water applications, including car wash, pressure wash, sewer jetting, and cooling misting. Forged brass manifold has high-grade head bolts for added protection and strength. Feature a precision die-cast crankcase and stainless steel valves, plus oversize bearings and connecting rods for heavy load disbursement. Nos. 1MDB3 and 1MDB2 have 316L stainless steel manifold and Viton® seals. Direct-Mount, Electric Motor Pumps have standard C-face mounting.

See page 1591 for pressure washer accessories.

New installations require a Pump Rail Kit No. 4YNP7, sold separately on this page.

For additional spray components and accessories, see page 1591.

No. 3ACB9

No. 3ACA9

Dayton JABSCO

Self-Priming Flexible-Impeller Pumps

- Replaceable impellers

No metal-to-metal contact. Excellent for fluid transfer, spraying, lawn/garden applications, filter systems, water drainage, and machine/equipment coolant recycling.

Note: Not to be run in a dry condition.

Dayton®—Can be used with nonabrasive fluids in a wide range of commercial, industrial, and agricultural applications. Bronze pedestals can be easily installed with a capacitor-start electric motor with sufficient starting torque.

- Max. temp.: 180°F
- 1725 rpm motors (Nos. 3ACA9 to 3ACB2 do not include motors)

Jabsco®—Replaceable Viton® impellers handle more-corrosive liquids.

- Max. temp.: 176°F 316 stainless steel and stainless steel, 180°F epoxy
- 1750 rpm 316 stainless steel, 3000 rpm epoxy and stainless steel

High-Pressure Pump Accessories

Adjustable Chemical Injectors—In-line, corrosion-resistant injectors can be mounted downstream, after the pressure pump and regulating valve, to inject liquid detergents or cleaning agents. Intended for use with a double lance, rollover nozzle, or quick-connect nozzle. Brass, stainless steel, and ceramic construction with Buna N seals.

High-Pressure and Regulating Unloader Valves—Protect pump and system components from surge shock damage that can occur when spray guns are shut off at high pressure. Brass and stainless steel construction with Buna N seals.

Size	Flow	Max. Water Pressure	L	W	Brand	Item No.
Water Check Valve						
¼"	6.6 gpm	4500 psi	2⅛"	⅞"	Mecline	**20FV59**
⅜"	10.5 gpm	5800 psi	2²¹⁄₆₄"	1¹⁄₁₆"	Mecline	**20FV60**
½"	21 gpm	5800 psi	3¹⁄₃₂"	1¹¹⁄₃₂"	Mecline	**20FV61**

Inlet Water Filter—Machined aluminum filter assures a clean water stream for any high-pressure pump. Filter is 50 mesh.

Regulating Pressure Relief Valve—Bypasses the required amount of water to maintain constant system pressure at all times, whether spray gun is open or closed. Brass and 300 stainless steel construction with Buna N seals.

Regulating Valves—Protect pumping systems from excess pressure. Brass bodies. Wetted materials: brass, stainless steel, Buna N, plastic, and steel on valves with male outlets; brass, stainless steel, Buna N, and steel on valves with female outlets.

Nos. 1MDA1 and 1MDA2 have a bolt-on design with internal bypass system. No. 1MDA1 fits pumps Nos. 4WXV7 to 4WXV9 and 4WXW1 to 4WXW6. No. 1MDA2 fits pumps Nos. 4WXX5, 4WXX6, 5ZNT5 to 5ZNT7, 5ZNT9, 5ZNU0, and 5ZNU1.

Nos. 1MDA3 and 1MDA4 feature a ¼" accessory port.

Safety Valve—For use as a secondary safety device to help keep pump and system pressure from reaching dangerous levels; must always be used with a pressure regulator or unloader. Adjustable range: 1000 to 4000 psi. ¾" hose barb discharge. Brass and 400 stainless steel construction with Delrin® seals.

Thermal Valve—Maintains a max. water temp. of 140°F to protect pump from possible heat damage while in bypass mode. Brass construction with Buna N seals.

Water Check Valves—Brass and stainless steel construction with Buna N seals. Can be mounted in a vertical or horizontal position.

Vacuum Pump and Portable Container

Dayton

PUMP

Air-operated aluminum-body pump handles cutting fluids, waste oil, paint sludge, contaminated liquids, etc. Automatically shuts off when receiving container is full.

CONTAINER

Smooth, seamless polyethylene drum has 2" NPT bung opening and a ¾" opening. With carrying handle for easy transport.

Description	Construc. Material	Body Material	Item No.

Pedestal Gear Pumps—Intermittent-Duty

Dayton

- Max. temp.: 210°F, except 230°F on Nos. 4KHJ4 to 4KHJ9
- Max. viscosity: 500 SSU at 1725 rpm
- Max. pressure: 100 psi
- Self-priming

Intermittently transfer nonabrasive or nonparticulate viscous liquids with a near-pulseless flow. Not for use in pulley drive systems that do not have a pillow-block shaft assembly. Bidirectional rotation.

Note: Higher viscosity liquids (100,000 SSU) must be transferred with more horsepower at reduced speeds.

BRONZE

Bronze spur gears are great for water-based liquids. Wet-end components: 303 stainless steel, bronze, brass, PTFE, and carbon graphite.

CAST-IRON

Steel spur gears are great for oil-based liquids. Wet-end components: cast iron, steel, and Viton® on Viton-seal models; steel, cast iron, and PTFE on PTFE-seal models.

** Flow is based on pumping 10-weight oil at 70°F at 1725 rpm. See page 13 for optional motors.*

Pedestal Gear Pumps

Dayton

- Max. viscosity: 500 SSU at 1725 rpm
- Max. pressure: 125 psi
- Mechanical seals
- Self-priming

Transfer nonabrasive or nonparticulate liquids with a near-pulseless flow. Pumps are bidirectional with positive displacement. All have keyed shafts and a seal flush chamber. Shaft ball bearings allow use with pulley-drive systems. Cast-iron and bronze models have pressure relief valves.

Note: Higher-viscosity liquids (100,000 SSU) must be transferred with more horsepower at reduced speeds.

CAST-IRON

- Max. temp.: 280°F

Steel spur gears handle oil-based fluids. Viton® mechanical seals with carbon/ceramic faces provide good resistance to compatible chemicals. Other wetted materials are cast iron and steel.

BRONZE

- Max. temp.: 210°F

Fortron® polyphenylene sulfide (PPS) spur gears transfer water-based liquids with no metal-to-metal contact; good chemical compatibility. Buna N mechanical seals with carbon/ceramic faces. Other wetted materials are bronze, brass, Fortron, and carbon graphite.

316 STAINLESS STEEL

- Max. temp.: 280°F

Fortron® polyphenylene sulfide (PPS) spur gears handle viscous-based fluids and operate quietly with no metal-to-metal contact; good chemical resistance. Viton mechanical seals with carbon/ceramic faces. Other wetted materials are 316 stainless steel, carbon graphite, and Fortron.

Dayton

Adjustable Pressure Relief Valves

- Operate in any position
- Max. temp.: 180°F

Pressure can be set to maximize discharge performance. Some bypass may occur.

WARNING: For use with positive displacement pumps only. Not designed for complete shutoff. Not for hot water heaters, boilers, or steam service. Install only on pressure side of pump to relieve pressure. Using valves under or over rated pressure will cause valve to leak.

Intermittent-Duty Rotary Gear Pumps—Carbonator-Mount

Dayton

No. 4KHP8

No. 41TK24

- Max. viscosity: 500 SSU at 1750 rpm
- Max. operating pressure: 100 psi
- ODP motor enclosures
- Mechanical seals

These pumps are self-priming and have a pressure relief valve. Bidirectional (reversible) motor drive with thermal overload protection.

CAST-IRON
- Max. temp.: 280°F

Designed for oil-based fluids. Steel spur gears and shafts with Viton® seals. Other wetted materials are cast iron, 303 stainless steel, carbon, and ceramic.

BRONZE
- Max. temp.: 210°F

Handle water-based fluids. Carbon graphite bushings and Buna N seals. Other wetted materials are bronze, brass, Buna N gasket, and 303, 17-7, and 18-8 stainless steel.

Rotary Gear Pumps—Close-Coupled

Dayton

No. 4KHC5

No. 41TK06

- Max. viscosity: 500 SSU
- Max. pressure: 125 psi
- Mechanical seals
- Self-priming

Can be mounted on NEMA C-face motors to provide a near pulseless flow with easy maintenance. Feature ball bearings and keyed shafts.

CAST-IRON
- Max. temp.: 280°F
- ODP motor enclosures

Steel spur gears handle oil-based fluids. Viton® carbon/ceramic seal with cellulose gasket. Other wetted materials are cast iron and steel. With pressure relief valve.

BRONZE
- Max. temp.: 210°F
- ODP motor enclosures

Fortron® PPS spur gears have a linear polymer structure for greater strength, and transfer water-based liquids with no metal-to-metal contact; good chemical compatibility. Ryton® PPS gears have a cross-linked polymer construction and can resist a variety of solvents and corrosive chemicals. Carbon/ceramic/Buna N seal and carbon graphite bushings. Other wetted materials include bronze and brass. With pressure relief valve.

316 STAINLESS STEEL
- Max. temp.: 280°F
- TEFC motor enclosures

Fortron® PPS spur gears are a linear polymer construction for added strength, and operate quietly with no metal-to-metal contact; good chemical resistance. Viton® seal. Sealed flush chamber increases pump efficiency. Other wetted materials are 316 stainless steel, carbon graphite, Graphoil® gasket, and ceramic.

CHEMSTEEL®

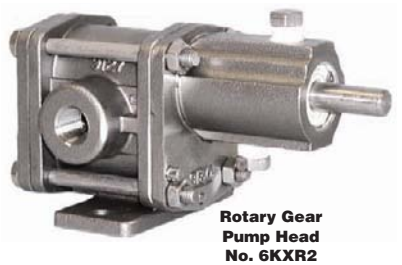
Rotary Gear Pumps—High Temperature

- Max. temp.: 450°F
- Max. viscosity: 100 SSU, except Pedestal are 500 SSU
- Metering accuracy ±0.5%
- Self-priming

Quietly transfer highly corrosive liquids at higher pressures and temperatures. Pumps have a 316 stainless steel housing and feature Waukesha 88® nongalling helical gears. With heavy-duty 1-pc. combination bearing and full-size carbon bearing wear plate; sized to match the full gear diameter. Pump housings have through-bolt construction with PTFE-encapsulated silicone O-ring housing seals and a seal flush chamber. Other wetted materials include 316 stainless steel, W88 helical gears, PTFE, Kalrez®, ceramic, and carbon. Bidirectional rotation.

Magnetic Drive—These sealless pumps are used to transfer harsh and aggressive chemicals in environmentally sensitive or regulated areas.
- Max. pressure: 110 psi

Mechanical Seal—Type 9T stainless steel and PTFE mechanical shaft seals handle many harsh chemical liquids.
- Max. pressure: 150 psi (No. 2ERA9 is 110 psi)



Magnetic Drive
No. 2ERE7

Mechanical Seal
No. 2ERC3

Rotary Gear
Pump Head
No. 6KXR2

** To convert to feet of head divide by 2.31. † 3-phase models are inverter-duty rated and meet NEMA MG 1 Part 31.4.4.2 in constant- and variable-torque applications with a 20:1 turndown ratio; see page 157 for AC Adjustable Frequency Drives.*

Dayton®

Hot Oil and Filtration Pumps

- Max. temp.: 375°F
- Max rpm: 1725

Bidirectional pumps feature all cast-iron construction and provide a near-pulseless flow in intermittent-duty commercial hot oil transfer applications. Nonclogging pumps have spur gears, and are able to pass nonabrasive particulates and reduce oil shear. Suitable for use in commercial fat fryers, filtration processes, and cooking oil waste removal. Not for use with water-based fluids. Include motor with ODP enclosure, except Nos. 6DHH7 and 6DHH8.

Rotary Gear Pumps, Carbonator Mount
- Max. viscosity: 100 SSU

Rotary Gear Pumps, Close-Coupled—Include relief valve.

PROCON® Products

Carbonator-Mount Rotary Vane Pumps

No. 6XE79

No. 6XE86

No. 1MCX2

- **Max. fluid temp.: 158°F**
- **Max. operating pressure: 250 psi**
- **NSF rated, except Nos. 6XE82 and 6XE84**

These positive displacement pumps run quietly, have low vibration and pulsation characteristics, and are virtually maintenance-free. They can handle many liquids with low lubricating characteristics at relatively high pressures. Flow remains constant over entire pressure range. Most models are self-priming (except Nos. 6XE92 and 6XE95). Metal-to-metal contact is eliminated, resulting in low starting torque. 303 stainless steel shaft, stainless steel rotors, and built-in relief valve. Pumps mount on NEMA 56C frame motors (adapter kit sold separately) for a coupling drive, or can be attached to a NEMA 48YZ motor with a V-band clamp. High-temperature plastic internal bypass valve eliminates the need for an external relief valve on all models except Nos. 6XE92 and 6XE95. [(Nos. 6XE82 and 6XE84 have internal solid-brass bypass valves. Brass and stainless steel also available on all other models; call 1-800-GRAINGER (472-4643).]

Pumps work with carbonated, deionized, or distilled water and moderately aggressive liquids—such as fire-resistant fluids, hydraulic oil, lubricants, coolants, insecticides, and soap. For use in dispensers, espresso machines, sprayers, filtration and water purification processes, team-cleaning and car-washing machines, pressure boosters, atomizing/misting humidification systems, circulation systems, laboratory pumps, pilot plants, boiler feeds, textile machines, and fire jockey pumps.

Low lead.

Bronze Couplings—Couplings absorb most of the wear usually inflicted upon pump and motor shafts to protect both in the event of misalignment, extending pump/motor life. Can be easily and inexpensively replaced as needed. Use only with slotted rotors.

Fluid-o-Tech® POWER THE FLOW

Rotary Vane Pumps

- **Max. temp.: 158°F**
- **Max. pressure: 290 psi**

These high-pressure pumps provide a steady liquid flow and feature a rugged 303 stainless steel rotor and a graphite vane. Suitable for use in beverage, dairy pasteurizing, liquid transfer, machine coolant, reverse osmosis, and water boosting applications. You can mount all carbonator mount pumps to any NEMA 48Y frame motor. Shaft Saver No. 34TL24 (sold separately) installs between the motor hub and pump to help reduce wear on the motor and pump shaft. Includes 2 clamps, collar, and coupling. Pumps are NSF compliant and suitable for use in potable water applications.

Compression Packing Seals

Palmetto®

Packing materials are calendared and oven-dried to help make the packing more dense so that fewer adjustments are required. Lubricated seals keep the packing from spinning with the shaft during break-in. Can be cut and formed into individual rings to act as a seal in pumps or valves. See chart for pump and valve performance limits.

Graphite No. 4VLE4

Key	Palmetto Style	Description	Temp. Range (°F)	Max. Temp. in Steam (°F)	Max. Press. (psi) Pumps	Max. Press. (psi) Valves	Max. Press. (psi) Steam	Max. Shaft Speed (ft./min.)	pH Range
FOOD / CHEMICAL		**White TFE-based packing for food, chemical or other applications needing a white or non-staining packing w/ a wide pH range**							
A	1367FS	FDA compliant PTFE white packing w/ mineral oil lubrication	-400 to +500	NR	250	NR	NR	1200	0 to 14
B	1367S	PTFE white packing w/ lubrication (MIL-P-24396, Type A) for corrosive chemicals, pumps, & mixers	-400 to +500	+500	250	NR	NR	1200	0 to 14
HIGH SPEED / TEMP		**Packing for high shaft speeds and/or high-temp. media**							
C	1555	Graphite filament packing w/ graphite for high-temp. & high-speed applications w/ good sealability. Dull gray color.	-450 to +800	+1200	500	3500	3500	4000	1 to 14
D	1575	Carbon is good for high temps. & high shaft speeds	-450 to +650	1000	500	2500	2500	4000	0 to 14
E	1578	Carbon/PTFE for high temps. & high shaft speeds	-450 to +650	1200	500	2500	NR	4000	0 to 14
F	5000	Braided flexible graphite packing w/ no wire for high speed & temps. Shiny gray color.	-450 to +650	+1200	250	2500	2500	4000	0 to 14
G	5080	Flexible graphite packing w/ carbon corners for high speed & temps. provides for low leakage in pumps & valves. Shiny gray color.	-400 to +650	+1200	500	3000	3000	4000	0 to 14
VALVES		**Valve packing**							
H	1367H	PTFE white packing without lubrication (MIL-P-24396, Type B) used w/ valves in corrosive, pressure-resistant non-steam applications	-400 to +500	NR	NR	2000	NR	NR	0 to 14
I	5000W	Flexible graphite packing w/ a small amount of Inconel wire for steam valves. Shiny gray color.	-100 to +650	+1200	NR	3500	3500	NR	1 to 14

Compression Packing Extraction and Insertion Tools

Extractors remove compression packing rings from pumps and valves for replacement. Interchangeable corkscrew and woodscrew tips allow removal of both fibrous and hardened packing. Flexible shafts make it easier to remove hard-to-reach packings.

Tamping Tools are used to install packing rings into the stuffing box.

Packing Seals

- Standard industry seal 981
- Pkg. of 6

Self-adjusting, shaft-mounted axial lip seals are designed to deflect dust, dirt, mud, and water away from shafts and prevent lubricant loss. Flexible, hinged lip needs no special machining to fit tightly to shaft. Seals automatically vent excess grease during regreasing.

Resilient nitrile rubber (NBR) material stretches over shaft obstructions for easy installation; its natural tension holds the seal in place while the shaft turns.

Shaft Size (in.)	Seal Bore (in.)	Seal Thickness	Item No.

Pac-Seal Replacement Pump Shaft Seals

- Buna elastomer temp. range: -40° to 225°F
- Viton® elastomer temp. range: -25° to 400°F
- PTFE elastomer temp. range: -350° to 500°F
- 2cc P80 lubricant is included with every seal

Rotary units have crimped head to withstand higher pressures and shaft speeds; stay in-place during installation and protect against being dislodged by foreign material. Hex-torque drive system provides longer seal life and helps reduce wear on shaft.

Types 8T/9T—High-quality, positively driven multispring pusher style for industrial and severe chemical applications. The rotary unit is set-screwed to the shaft for positive drive. Rotaries feature replaceable seal rings. O-ring mount.
- Replace Crane Type 8 and 9, respectively

Type 16—Offer greater pressure and speed capabilities. Unitized rotary seal incorporates crimped-head design and hex-torque drive.
- Replace US Seal Type A, Crane Type 6, and Sealol Type 60L

Types 21/31—Offer dependable sealing in mechanical pumps up to 250 psi. Hex-shaped outer shell reduces stress on components. Type 31 O-ring mount. Nos. 1R316, 5NC05, 1R307, and 1R301 need no spring retainer.
- Replace US Seal Type C, Crane Type 21, and Sealol Type 43

Types 51/52—Convolution in seal bellows allows for greater axial movement and shaft deflection than Type 21. Narrow cross-section for ANSI and DIN 24960 seal bores.
- Replace US Seal Types E, D, and Crane Types 1 and 2

Type 8T/9T

Type 16

Type 21/31

FLOWSERVE Pac-Seal

Type 51/52

Type 68

Type 68—Designed for use in pool and spa pumps. Install with the spring-loaded portion pressed into the pump housing and the mating ring rotating with the shaft.
- Replace US Seal Type B and Crane Type 6A

GA GRAINGER APPROVED

No. 5NAR8

Eductor Jet Pumps

Pumps use high-pressure liquid or steam to create strong suction within the pump body. The suction draws a second liquid or gas into the pump and then forces it out, under pressure, through the discharge. Suitable for mixing fluids, vacuum pumping water, and seawater desalination.

Temp. range: -40° to 230°F, except liquid-operated PVC is -40° to 70°F. Max. head: 40 ft. Max. suction lift pumping liquids: 27 ft. liquid-operated models, 20 ft. steam-operated models. Inlet pressure pumping liquids: 35 to 150 psi, except 15 to 200 psi liquid-operated with 316 SS and bronze inlet and 15 to 100 psi liquid-operated with PVC inlet. Steam-operated models inlet pressure pumping gases: 20 to 80 psi.

For Liquid-Operated Pumps*

Atmos.	36 cfm	30 cfm	28 cfm
15" Hg	6 cfm	13 cfm	8 cfm

** Charts show suction flow based on a 1½" suction/discharge pipe size. To determine the suction flow for other pipe sizes, use the sizing factor shown in the table as a multiplier. For example, a pump with a 40-ft. discharge head, 5-ft. lift, and 200 psi water pressure, has a suction flow of 22.5 gpm (based on 1½" suction/discharge). For the suction flow of a pump with a 1¼" suction/discharge, multiply 22.5 gpm by the 0.61 sizing factor to get 13.7 gpm.*

Reverse Osmosis Drinking Water System with Faucet

- Max. pressure: 125 psi
- Max. temp.: 100°F
- Max. influent TDS: 1200 mg/L
- Includes tank

This under-the-sink unit helps provide cleaner and better tasting water. Model features multi-stage filtration with separate sediment and chlorine taste and odor filters for membrane module protection. Unit also has a sanitary, encapsulated reverse osmosis membrane, and carbon block post-filter for superior flow from a dedicated faucet. System is powered by residential line pressure and requires no electricity. NPT connections. Meets NSF/ANSI 58.

Water Softeners

North Star WATER CONDITIONING

PRO PRODUCTS LLC

Long-lasting softening resin has a higher hardness holding capacity than standard resins to condition water more effectively, and to help lengthen the time between regeneration cycles. Models have a 10-yr. limited manufacturer's warranty on resin and salt tanks, 3-yr. limited manufacturer's warranty on electronics.

Note: We recommend that water be analyzed before selecting water treatment equipment.

CABINET

Have AutoSense™ technology that monitors your water usage to determine the optimal regeneration frequency and to help minimize water and salt consumption. High-flow valve for optimal water pressure and a low salt monitor that lets you know when the softener is getting low on salt. No. 490R05 features a self-cleaning sediment filter so there are no messy filters to replace.

2-, 3-, AND 4-TANK

During the regeneration cycle the resin bed is cleaned in the opposite direction of the service flow in order to lift the hardness minerals up and out of the tank while reducing your salt and water use. The high-flow backwash design helps ensure proper bed cleaning and allows you to customize the backwash duration based on your softener application. The high-pressure resin tanks and durable salt storage tanks are designed for long life.

NO. 25FL87

Makes it easy for you to clean and restore resin beds to peak efficiency and help maintain water softener performance.

RUST PREVENTER AND INHIBITORS

Help remove and prevent rust stains caused by irrigation on cement, concrete, driveways, masonry, pavers, exterior walls, and most exterior surfaces. No. 39AP36 is suitable for use where the pH is less than 6. Nos. 39AP34 and 39AP37 are dispensing systems for use with Rust Preventer and Inhibitor, sold separately.

NO. 5ZFW9

Removes iron and rust buildup that coats the resin bed in a water softener.

Replacement Filter Cartridges

PENTAIR

- Max. pressure: 125 psi
- Max. temp.: 100°F

All filter cartridges are certified for use in potable water applications. NSF Certified under NSF/ANSI 42, except No. 53GK21 is NSF Certified under NSF/ANSI 42 and 53.

Filter Cartridges—Help reduce scale buildup caused by dirt and dissolved minerals. Improve the taste of fountain drinks and coffee.

Replacement Filter Cartridges—Can reduce fine particles and dirt from drinking water and help keep your equipment running and lower your maintenance costs.

Maintain Water Purification and Filtration Systems

Centrally installed water purification and water filtration systems are an ideal way to bring clean, good-tasting drinking water into any building. Help keep your employees healthy by regularly maintaining all of your plumbing strainers and filters. Choose from our selection of filter cartridges that help reduce rust, sediment, scale, odors, and chlorine taste.

Find more water filters at **Grainger.com®** and search for **Water Filter Cartridges**.

Filtration Systems

No. 6XWT9

No. 5WFG5

All systems and replacement cartridges are certified for use in potable water applications.

INSURICE® FILTRATION SYSTEMS, NOS. 5WFG3 AND 5WFG4

Reduce problems in ice machines caused by scale buildup from dirt and dissolved minerals. The Micro-Pure® II media inhibit bacteria growth and reduces chlorine taste and odor, and other contaminants. No. 5WFG4 features a water shutoff, flushing valve, and outlet pressure gauge.

INSURICE® SINGLE PF-I2000, NO. 6XWT9

Ice machine filter system reduces scale buildup from dissolved minerals and dirt, and helps reduce clogging of distribution lines, evaporator plate, and pump. Reduces chlorine taste and odor and other contaminants. Micro-Pure® II media help inhibit bacteria growth.

KLEENSTEAM® II SINGLE SYSTEM, NO. 5WFG5

Delivers filtered water with scale inhibition and deliming capabilities. Dual cartridge system allows for low- or high-flow capacity steamers and allows for future expansion of water needs.

KLEENSTEAM II TWIN SYSTEM, NO. 6XWU2

System delivers high-quality filtered water for steam applications, and has scale inhibitors and deliming capabilities. Dual cartridge design is suitable for low- or high-flow capacity steamers. Improves the performance and helps extend the life of steam equipment. Reduces chlorine-induced corrosion.

SR-X SCALE INHIBITOR FEEDER AND DELIMING SYSTEM, NO. 5WFH3

Provides scale reduction for steam applications as well as deliming capabilities. Include clear SR-X housing, SS-10 cartridge, dip tube assembly, and 2.2-lb. package of ScaleKleen™ for scale removal and deliming.

COLDRINK® 2-MC² SYSTEM, NO. 6XWU0

Improves the taste of fountain beverages and helps retain the beverage's carbonation. Reduces chlorine taste and odor and other contaminants. Micro-Pure® II media help inhibit bacteria growth. Protects beverage system seals, pump, tubing, and small orifices from abrasive wear, clogging, and corrosion.

QL3-BH2 COFFEE FILTER, NO. 6XWU1

Provides premium quality filtered water for coffee and beverage applications. Activated carbon media reduces chlorine taste, odor, and other contaminants. Reduces scale buildup and prevents lime scale from forming in brewers. Micro-Pure® II media help inhibit bacteria growth.

KLEENWARE® HTS-11 SYSTEM, NO. 5WFH4

Inhibits mineral deposits and provides corrosion protection. Helps extend the life of food service equipment. Suitable for use in commercial glassware washers, dishwashers, and warewashing booster heaters.

QC7I FILTER HEAD ASSEMBLY NOS. 5WFG6 AND 5WFG8

Include a built-in water shutoff valve, pressure gauge, and mounting hardware. Accept many Everpure® specialty cartridges including cartridges for ice, coffee, espresso, and fountain beverage machines; see replacement filter cartridges on this page.

SCALEKLEEN™ SCALE REMOVER/DELIMER, NO. 5WFH0

Can be fed into the water system without the use of hazardous chemicals or special piping.

Beverage, Coffee, and Ice Filtration Systems

- Max. pressure: 125 psi
- Max. temp.: 100°F
- For commercial use only
- Connection: ½" inlet/outlet

Effective, easy-to-install solutions that meet the volume, water clarity, and maintenance expectations in most food service applications. Healthcare Cartridges Nos. 40XA65 to 40XA69 help control bacteria in ice makers. All systems and cartridges are NSF Certified.

Cold Beverage Filtration Systems— Provide quality carbonated and noncarbonated beverages in most post-mix systems.

Ice Water Filtration Systems—Can reduce corrosion, sediment, and scale in most commercial cubers and flakers.

Multiple Equipment Water Filtration Systems

- Max. pressure: 125 psi
- Max. temp.: 100°F

Systems operate with 2 separate streams exiting the manifold, with 1 stream adding a scale inhibitor from a dedicated cartridge, the second stream supplies cold beverage dispensers and includes no added scale inhibitor. Nos. 54EJ74 and 54EJ75 are designed to provide water for combi-ovens and steamers. All systems are NSF Certified.

Food Service Replacement Cartridges for Older Systems

- Flow rate: 1.5 gpm
- Max. pressure: 125 psi
- Max. temp.: 100°F
- Connection: ⅜" NPT

Feature quick-change design to reduce contamination during cartridge change-outs. Preactivated carbon block filter media protect equipment and provides better-tasting water. FDA CFR-21 and NSF compliant materials.

Commercial Food Service Retrofit Cartridges

- Max. pressure: 125 psi
- Max. temp.: 100°F

For Everpure® systems and for use as single cartridges or in combination systems. Effectively reduce sediment, chlorine, unpleasant taste and odor, cyst, and scale. The 0.5-micron units for cyst reduction, 1-micron units for normal municipal water, and 5-micron units for heavy dirt loading such as well water applications. Nos. 5PT02, 4DY61, 4DY57, 5PT06, and 4DY59 include Scale Inhibitor. For cold water commercial use only.

Point-of-Use Inline Filter Systems

- Max. pressure: 125 psi
- Max. temp.: 100°F

NSF Certified.

Pentair®/Pentek®—Reduce rust, sediment, and come with either FPT connections or John Guest® push-fit connections to ease installation.

3M™ Aqua-Pure™—Inline filters remove sediment, dirt, rust, and chlorine taste and odor. Install on cold water line; not for use with hot water. No. 3P782 also includes a scale inhibitor.

Plastic Filter Cartridge Housing Systems

- Include 1 cartridge

Systems help to deliver high filtration efficiency and sediment capacity, while helping to protect against pressure surges and water hammer. Suitable for drinking and cooking water and all food applications.

Note: Cartridges should be replaced every 3 to 4 months, or when a noticeable drop in pressure occurs.

Plastic Filter Cartridge Housings

- Cartridges sold separately on Grainger.com®
- Refer to filter cartridge listings on page 2707 for applicable cartridges

No. 3BU37—Equipped with manually operated pressure-relief button to relieve internal line pressure and simplify cartridge replacement. Meets NSF Standard 42.

No. 2P275—Internally actuated pressure relief valve facilitates cartridge replacement.

304 Stainless Steel Single-Cartridge Filter Housings

Housings only; cartridges sold separately.

PENTAIR®/PENTEK®

- 304 stainless steel construction

Feature cast-brass/nickel-plated head and accept a complete range of standard double-open end (DOE) cartridges; see page 2709. Include cap and sump.

3M™ AQUA-PURE™

- 316 stainless steel head

Housings withstand unusually high pressures and are easy to install on incoming water lines. Design allows quick cartridge replacement. Include mounting bracket.

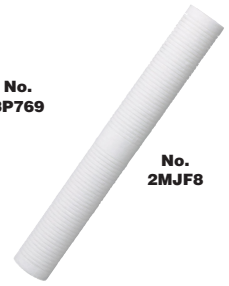
Cast-Iron and Steel Housings and Micro-Klean RT Cartridges

HOUSINGS
- Max. pressure: 150 psi
- Max. temp.: 250°F

Center-post construction and a 3-pc. housing that is easy to disassemble for cleaning.



Note: Not for use with potable water applications.

CARTRIDGES
- 2.6" O.D.; 1" I.D.
- 15 psid at 176°F (1.0 bar at 80°C)
- 25 psid at 140°F (1.7 bar at 60°C)
- 60 psid at 68°F (4.1 bar at 20°C)
- Double open end (DOE)

Thermally bonded filter cartridges provide low operating pressure drop and longer service life, allowing higher flow rates per 10" length. The rigid structure resists compression and unloading at higher pressure differentials. Ideal for use in general industrial, water, and food and beverage applications. FDA 21 CFR compliant, NSF 42 and 61 certified.

Filter Cartridges

3M Aqua-Pure™

- Max. pressure: 125 psi

Fit most filter housings. Flow rate doubles when filter is used in a 2-high sump.

Note: For proper operation, water must be microbiologically safe.

No. 1P753

No. 1P754

POLYPROPYLENE

Progressive porosity cartridges are rated for long life under extra-heavy dirt loading. Nonfiber-shredding construction withstands high pressure drops. Conform to all public health requirements for water purification. FDA CFR 21 compliant materials, except for No. 2LMU1.

CARBON

Feature radial flow design that provides very low pressure drop.

Nylon Filter Cartridge Housings

PENTAIR

- Max. pressure: 125 psi
- Max. temp.: 165°F
- Cartridge not included

Withstand higher temperatures than standard polypropylene (plastic) housings. Economical alternative to stainless and carbon steel housings. No pressure relief. No. 4BB50 has a slim design that saves space.

No. 4BA75

No. 4BB50

Stainless Steel Multicartridge Filter Housings

PENTAIR

3M Aqua-Pure™

Easy to install on incoming water lines. Models with 316L stainless steel construction offer greater corrosion resistance and longer life than 304 stainless steel housings. Filter cartridges for all housings are available on this page.

Note: Actual filter operating temperature depends on the capability of the filter cartridge used in the housing.

No. 38FH51

No. 1ZKK7

PENTAIR®/PENTEK®
- Max. pressure: 125 psi
- Max. housing temp.: 300°F

Feature a band clamp closure that makes cartridge change-outs quick and easy. Suitable for a wide variety of commercial and industrial applications.

3M™ AQUA-PURE™
- Max. pressure: 150 psi
- Max. temp.: 250°F

A single housing clamp and locking hand knob on the internal center rod help simplify cartridge changes. For use in high-temperature/high-pressure/high-flow-rate industrial applications, hotels, offices, schools, restaurants, laundromats, and commercial buildings. Nos. 1ZKK6 to 1ZKK8 feature an electro-polished exterior finish that provides a mirror-like appearance and a high level of corrosion resistance.

Versaflex™ Melt Blown Polypropylene Filter Cartridges

- 2½" O.D.
- Max. temp.: 180°F
- Double open end (DOE)

100% pure polypropylene cartridges are manufactured with FDA-listed materials. A thermal bonding process seals the melt blown media to the endcaps. Graded-density matrix traps and holds dirt. Suitable for finish machining, food and beverage handling, oils, parts washers, RO system prefiltration, seal protection, solvents, and spray nozzle protection.

String-Wound Filter Cartridges

- 2 7/16" O.D., 1" I.D.
- Pkg. of 6

Single-piece construction eliminates spacers and bypassing. Fulflo® Honeycomb depth cartridges trap the solid particles on and within the depth of the entire cartridge. Fit all similar competitive housings. Can be used in many fluid applications including oxidizing agents, concentrated alkalies, potable liquids, dilute acids, and alkalies. Also suitable for use with mineral acids, organic acids, solvents, petroleum oils, photo solutions, amines, and water. Filter media selection is application dependent.

Filter Cartridges

- Double open end (DOE)
- Fit most manufacturers' housings

No. 1ECZ5 features Endurawrap™ design, an innovative polyolefin bilaminate prefilter that can increase cartridge life by trapping sediment that typically plugs carbon block cartridges. Suitable for under-sink installation.

Pleated Filter Cartridges

- Double open end (DOE)

Pleated design increases surface area for better dirt-holding capacity and longer filter life.

Polyester—Bacteria- and chemical-resistant. No. 4BA87 meets NSF 42.

Cellulose Polyester—Resin-impregnated cellulose/polyester fiber blend provides higher wet strength than regular cellulose cartridges. Offer high flow rates and dirt-holding capability, while maintaining extremely low pressure drops.

Cellulose—Economical prefilter for dirt and sediment reduction in applications with chlorinated water.

POLYFLOW®-G

Thermally bonded 100% virgin polypropylene ensures clean filtrates and excellent chemical/thermal compatibility. Ideal for solvent filtration, liquid clarification, recirculation, general water filtration, reagent-grade chemicals, and DI/RO prefiltration.

ABSO-MATE™ ABSOLUTE RATED

All-polypropylene construction is compatible with most chemicals, acids, bases, and solvents. Backwashable. 1-pc. construction eliminates bypass. Ideal for membrane prefilter and chemical-handling applications. FDA Listed.

Commercial Electric Water Heaters

- ¾" NPT water connection, except Heavy-Duty models are 1½"
- Include T&P valve
- 3-yr. limited manufacturer's warranty on tank and 1-yr. limited manufacturer's warranty on parts

Point-of-Use, 1-Phase—Provide hot water at the consumption point and help reduce costly temperature loss due to long piping runs.

Light-Duty—Use in applications requiring moderate quantities of hot water. Feature innovative upper and lower resistored elements. Max. temp. setting: 180°F.

Heavy-Duty—Models provide high hot water recovery in applications requiring large quantities of hot water. The System Sentinel feature provides a diagnostic panel with LEDs that correspond to the number, location, and status of each element. Multiple screw-in type stainless steel elements resist burn out and corrosion. Include a full port/full flow brass drain valve. All 3-phase models are field convertible to single-phase.

Residential Electric Water Heaters

- ¾" NPT water connection
- Include T&P valve
- 1-phase
- Low-lead compliant

Include full flow brass drain valve, except for Classic Point-Of-Use models.

Classic Point-Of-Use—Can fit under cabinets, counters, or mop sinks. One resistored stainless steel element to help prolong anode and tank life. 6-yr. limited manufacturer's warranty on tank and parts.

Classic—The resistored copper upper element and resistored stainless steel lower element help prolong anode and tank life. Include an EverKleen self cleaning device. 6-yr. limited manufacturer's warranty on tank and parts.

Classic Plus—Resistored stainless steel upper and lower elements to help prolong anode and tank life. Have System Sentinel LED diagnostic system that helps verify heating element operation. Include EverKleen self-cleaning device. 8-yr. limited manufacturer's warranty on tank and parts.

Marathon—The seamless, blow-molded polybutene tank impervious to corrosion and rust. The durable, molded polyethylene outer shell resists dents, salt air, and scratches. Include a thermally-fused upper element, and titanium lower element. Models in a residential application have limited lifetime tank warranty, 6-yr. limited parts warranty when registered online within 90 days of installation. Commercial applications have 5-yr. limited tank warranty, 1-yr. limited parts warranty.

Table Top—Ideal for installation in kitchens or other work spaces. Model has an acid- and heat-resistant baked enamel top, 4" backsplash, and rear plumbing connections. 6-yr. limited manufacturer's warranty on tank and parts.

Electric Hot Water Auto Booster

Compact unit only operates when hot water is required and provides up to 45% more hot water capacity. Booster can be installed on an existing tank water heater or nearby wall, and features programmable Vacation and Eco modes. Model has an external temperature display, rugged stainless steel heat exchanger, and a field serviceable element. Accuracy: ±1°F. ETL Listed.

Eemax Hot Water Solutions Made Easy

BOSCH

Electric Mini-Tank Water Heaters

No. 14U450

No. 4JY90

- Factory-installed T&P valve

Simply plug into a standard wall outlet and set thermostat control, except Nos. 21EW70 and 5AE45 are hardwired. All have glass-lined tank with titanium inside, stainless steel heating element, and 30" grounded 16/3 cord. 120V. Eemax MiniTank™ models have a 5-yr. limited manufacturer's warranty. Bosch heaters have up to 98% thermal efficiency and a 6-yr. limited manufacturer's warranty. UL Listed and UPC Certified; except Eemax models are ETL Listed, CSA and UL Certified.

Chronomite® Electric Tankless Water Heaters

CHRONOMITE Laboratories, Inc.

Up to 99% efficient and provide unlimited hot water on demand. Feature vandal-resistant aluminum housing and include compression fittings and faucet controls. Nos. 54EL15 to 54EL18 have user adjustable temperature and water flow (0.35 to 5.0 gpm). Nos. 10G720, 6DXT1, and 6DXT2 are designed for low-flow, handwashing applications and are cold water feed only. All models are certified for use in potable water applications. ADA compliant; UL and IAPMO Listed; HUD.

BOSCH

Bosch Electric Tankless Water Heaters

Mount under sinks in any direction. Meet National Appliance Energy Conservation Act. UL and C-UL Listed, are low lead, and certified for use in potable water applications.

Note: Pay careful attention to unit selection. Temperature and volume of water are dependent on the kilowatt rating of heater. The higher the kilowatt rating, the greater the volume of hot water. Max. outlet temp.: 135°F. These heaters are not designed to be used as boosters or preheaters. Install without a temperature/pressure relief valve (refer to local codes) close to the faucet or tap to eliminate long pipe runs. ½" NPT inlet and outlet.

Sanitizing Commercial Water Heaters

Rheem RUUD

- ASME T&P valve included
- Max. temp: 190°F
- Water connections have 1¼" NPT dielectric nipples

These 240V, 3-phase electric units provide 180°F sanitizing rinse water to comply with NSF and all federal, state, county, and local department sanitation codes. Screw-in type heating elements. LED diagnostic panel signals any nonoperating element. Glass-lined storage tank. 6" stainless steel legs. 150 psi working pressure. Fused 120V control circuit. 3-yr. manufacturer's warranty on tank.

No. 6E769

Eemax™ Electric Tankless Water Heaters

Eemax

Compact, energy efficient, and instantly heat water as needed and can provide endless hot water. Easy to install and require no drain pans, T&P valves, or venting. Have field serviceable elements and are ideal for use in commercial, industrial, residential and safety applications. All models are low-lead NSF 372 compliant and UL Listed.

LavAdvantage™—Ideal for point-of-use handwashing and emergency eye wash fountain applications.

AccuMix II™—Meet UPC 407.3 requirement with integrated ASSE 1070 mixer set not to exceed 110°F.

FlowCo™—Ideal for point-of-use handwashing applications.

ProSeries™—Commercial-grade for applications requiring up to 8 gpm. Can accommodate point-of-use and multiple fixture use.

Series Two™—Thermostatic models suitable for commercial and residential applications up to 4 gpm.

Three Phase™—Commercial-grade for up to 5 gpm in 3-compartment sink and hot water process applications.

SafeAdvantage™—ANSI Z358.1-compliant, commercial-grade models for use emergency drench shower and eye/face wash applications.

SpecAdvantage™—Models are commercial-grade and designed for low, duty cycle applications where precise temperature control is needed.

Professional Classic Electric Tankless Water Heaters

Rheem

Energy-efficient water heaters only heat water when you need it. Compact models can save energy, water, and are ideal for delivering unlimited hot water in commercial and residential applications. Require no venting, T&P valves, or drain pans to help ease installation. Include durable brass or stainless steel heat exchanger and a field serviceable element. Nos. 53UJ81 and 53UJ82 feature an external temperature display and control, and self-modulating power technology. All models are UL Listed and CSA Certified.

Commercial Gas Water Heaters

Standard Hot Water Recovery—Multiflue tank has top, front, and rear inlet/outlet water connections. Multiple magnesium anode rods resist corrosion. Spark-to-pilot ignition system, fiberglass insulation, and the innovative System Sentinel™ diagnostic system with LEDs that verify heater status.

Altitude certifications vary according to model and gas type. 80% thermal efficiency on 98,000 to 399,900 Btu models with 180°F max. temp.

Low NOx—Power assist enclosed burner design with stainless steel multiport burner tubes. Universal multiflue tank design with high limit temperature cutout.

Ultra Low NOx—Power assist burner design has stainless steel multiport burner tubes for longer Ultra Low NOx performance, <14ng/J.

High Efficiency Ultra LoNox—Up to 95% efficiency direct-vented heater has self-diagnostic electronic control with digital water temperature readout. Unit draws combustion air from outside the building, eliminating negative air pressure issues.

High Recovery—No. 38UP25 has an innovative, high-temperature, porcelain/enamel coating for corrosion resistance. Automatic control system shuts off gas supply if pilot is extinguished. Anode rods are magnesium construction for long tank life. Nos. 3CFJ7, 6E740, and 3CFJ8 have innovative System Sentinel™ diagnostic system with LEDs that verify heater status.

No. 5AU66

Power Venter Kits—Allow venting up to 50 ft. away from a side wall where no chimney exists. Aluminum vent terminal with heat shield allows installation through combustible or noncombustible surfaces. Kit includes vibration isolators.

Note: Compatible with Rheem-Ruud commercial gas heaters from 98,000 Btu to 400,000 Btu. Not for use on Low Emission water heaters.

Storage Tanks—Have 2 heavy-duty magnesium anode rods, 1" FNPT relief valve opening, and ¾" NPT thermometer and aquastat openings.

Note: Not ASME compliant.

Residential Gas Water Heaters

- Max. pressure: 150 psi
- Factory-installed T&P valve
- ¾" FNPT water connections

Heaters feature the innovative Everkleen™ system that helps reduce sediment build up. Models have a piezo igniter, glass-lined tank, enhanced flow brass drain valve, and anode rod. Suitable for natural gas, except Nos. 38UN64 and 38UN63 are LP gas compatible. All have an Eco-friendly burner and Low NOx design that meets 40ng/J limit. All water heaters are built and shipped for standard-altitude areas, but will perform at a derated value in higher altitudes. All heaters are AHRI and CSA Certified.

Note: Not for use in mobile homes. Conversion kits are not available. For SCAQMD-compliant heaters for California, call 1-800-GRAINGER (472-4643).

Triton™ Ultra High Efficiency Commercial Gas Water Heater

- Max. temp.: 185°F
- Water connections: 1½" (top), 2" (side)

Feature up to 98% thermal efficiency and the LeakSense™ integrated leak detection system that can catch leaks as small as a grain of sand. EcoNet® technology can provide performance updates and alerts via mobile devices and a full-color LCD display. Nos. 455C80 to 455C83 add the LeakGuard™ system with an innovative auto shut-off valve that allows no more than 24 oz. of water to escape the tank in a vacuum lock. All models provide ongoing monitoring of vital components to help detect and alert of potential issues, plus the innovative built-in condensate neutralizer helps reduce water acidity for safe drainage. Power vent or power direct vent. CSA Certified and ASHRAE compliant.

Rheem® Commerical Gas Tankless Water Heaters

- ¾" gas and water connections
- Electronic ignition

Featuring up to 97% thermal efficiency these tankless water heaters have 185°F built-in maximum temperature and common venting for up to 10 units with Rheem® polypropylene header kit. Design allows a variety of room air intake configurations. Nos. 459W41 to 459W44 have a manifold featuring a factory-installed translator that can connect up to 20 units in a daisy chain via included cable. All models have 5-yr. limited manufacturer's warranty on heat exchanger and parts, 1-yr. limited manufacturer's warranty on labor. AHRI, CSA, and Energy Star® Certified.

Stainless Steel Gas Appliance Connectors

Dormont A WATTS Brand

Use with natural gas, LP gas-air mixtures, or LP gas systems. Additional lengths are available; call 1-800-GRAINGER (472-4643). Certified for indoor and outdoor use.

Connectors comply with ANSI Z21.24 CSA 6.10, ANSI Z21.75/CSA 6.27, and NY MEA #376-92M.

Note: Code requires that a manual shutoff valve be installed on the gas line ahead of the connector. A new connector must be used on all new or moved appliances (ANSI Z21.24).

Food Service Gas Connectors and Kits, Quick Disconnects, and Fittings

Dormont A WATTS Brand

ANSI and CSA Certified.

Gas Connector Kits, Nos. 4XR86 and 4XR87—Include 48" hose with antimicrobial PVC coating, SnapFast® quick disconnect, restraining cable, and mounting hardware. Comply with ANSI Z21.69/CSA-6.16, ANSI Z21.41/CSA 6.9, and ANSI Z22.1NFPA 54.

SafetyQuik® Quick Disconnect Shut Off Valves—Gas connector cannot be disconnected until the gas flow is shut off or opened until the gas connector is reattached. Safety thermal shutoff stops the flow of gas when the internal temperature exceeds 350°F.

SnapFast® Quick Disconnect Couplings—Safety thermal shutoff stops flow of gas when internal temperature exceeds 350°F.

SwivelMax® Swivel Fittings—Allow complete 360° multiplane movement.

Bottle Filling Stations and Retrofit Kits

ELKAY Halsey Taylor

BOTTLE FILLING STATIONS

Cold water capacity of 8 gph. For indoor use and ADA compliant.

With Recessed Mount—Suitable as stand-alone units, or can be paired with Elkay Soft Sides®, SwirlFlo®, or Halsey Taylor OVL-II™ drinking fountains to create a high-end water station.

With Water Cooler, Wall Mount—Fill quickly with one-handed, touchless, sanitary operation. Include WaterSentry® Plus 3000 gal. cap. filtration system. LED indicates when filter replacement is required. The Green Ticker™ counts the number of plastic bottles saved from landfills. Key components have integrated silver ion antimicrobial to protect against mildew growth. GreenSpec® Listed. NSF/ANSI 42 and 53 certified for chlorine, taste and odor, and lead reduction.

RETROFIT BOTTLE FILLING STATIONS AND FILTER CARTRIDGE

Convert an existing water cooler to a bottle filling station. No. 5WNV7 is for Elkay EZ models; No. 6XUY8 for Halsey Taylor HAC models. Filter Cartridge No. 11U265 reduces lead, chlorine, sediment taste and odor from drinking water. 3000 gal. service life. 3¼" outside dia.

Water Coolers

- Inlet connection: ⅜" O.D. tubing
- Refrigerant HFC134A (CFC free)
- 115VAC
- Capacity of 50°F drinking water based upon 80°F inlet water and 90°F ambient

Halsey Taylor. ELKAY

Premium-quality coolers have a waterway system with stainless steel tanks, copper components, and lead-free materials; an easy-to-clean strainer traps particulates before they enter the cooler. Units feature permanently lubricated compressor and fan motor, a refrigeration system dryer, and preset temperature control that only requires altitude adjustment. All models have a splash-resistant stainless steel basin. In-line flow regulator (except for Nos. 34J988 and 49T426) maintains constant stream height at line pressures of 20 to 105 psi. Removable front panels for maintenance. P-trap not included; see page 2722. Units with a push bar can activate a stream of water during a power outage. Nonpressurized cooling tank on single-level units (except for Nos. 34J988 and 49T426) minimizes water damage in case of rupture.

Wall-Mount, High-Efficiency, No. 3EMZ3—GreenSpec® Listed; uses less energy and less water than standard models.

Wall-Mount, Electronic Sensor, Nos. 2KLF4 to 2KLF7—Feature sanitary, hands-free operation. WaterSentry® filter reduces lead, chlorine, and particulates; LED display (except for upper unit on Bi-Level models Nos. 2KLF6 and 2KLF7) indicates when filter needs replacing. Quick-connect with auto shutoff for easy filter cartridge changing (use No. 2XJ47, see page 2719).

Bottled Water Dispensers and In-Line Dispensers

OASIS® Water Friendly Solutions

Certified WBENC Women's Business Enterprise

Feature a stainless steel reservoir for cold water and hot water (on models with hot water capability). Bottled Water Dispensers Nos. 29NT99 to 29NU05 feature a WaterGuard® system that helps reduce spills during bottle changes and reduces the chance for dirt and dust to enter the cooler reservoir. Nos. 39AN02 and 447J85 allow you to bottom-load a 5-gal. water bottle, while No. 39AN02 also lets you connect the unit to a water line and eliminate the hassle of bottle changes. Nos. 29NU06 and 29NU07 have removable plastic reservoirs. In-Line Dispensers Nos. 34TG61 to 34TG64 are bottleless and have a dual-float system with a built-in safety float to help prevent overflowing. Models dispensing hot water feature a child-resistant hot water faucet. All dispensers have a 3-yr. limited manufacturer's warranty. UL Listed and Energy Star® rated. Nos. 29NT99 to 29NU07 and 447J85 are also C-UL Listed.

Electronic Water Dispensers

- Multistage filtration

UV in-tank disinfection protects the integrity of the purified water while it is being chilled or heated. Feature a large-capacity stainless steel reservoir and hot tank, push-button electronic dispensing, and hot switch with LED indicator on front panel. Easy access to replace factory-installed internally mounted filter cartridges (replacement cartridges sold separately).

TRUEBRO IPS CORPORATION

Undersink Piping Protectors

- Fit most undersink piping
- Easy installation—no tools required

Cushion and provide thermal protection in handicapped-accessible lavatories to assure ADA compliance. Easy-to-clean molded vinyl resists impact, stains, and chemicals. Conceal piping, electronic faucet connections, mixing valves, and trap primers.

No. 1ATD4

LAVATORY SHIELD, NO. 1ATD4

Air Admittance Valves

No. 1ATD5

- Use as individual, branch, circuit, or stack vents

Allow air to enter DWV systems to equalize pressure when water drains out of the system; eliminate the need for costly roof penetrations and vent piping. Nos. 1ATD5 and 1ATD6 meet ASSE 1050/1051 and NSF 14.

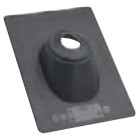
Drain Sumps, Trench Pan Drain, and Trench Pans



ZURN TUF-TITE

- Wheel load rating: Class C

Compatible with various pipe sizes including 4" dia pipe. Drain Sumps with Grate feature a universal snap-in pipe seal and a contoured bottom that directs all water to the drain to help eliminate standing water. For use in landscape or hardscape drainage and below downspouts. Trench Pan Drain and Trench Pans are for use in concrete, linear surfaces including driveways, floors, and truck docks.

Thermoplastic Roof Flashings and Sealant

OATEYSCS® Supply Chain Services HERCULES®

ROOF FLASHINGS

- Approved for Type B installations
- Accommodate a single vent pipe

No-caulk, slips over stack and under shingles for a watertight seal. For roof pitches up to 45°. Nonfading, noncracking thermoplastic base with rubber collar.

ROOF AND FLASHING SEALANT

Waterproof, will not separate, and requires no stirring. Apply to cold or wet surfaces; withstands the stress of dissimilar expansion rates. For concrete, roofing, metal, tile, and masonry.

JAY R. SMITH MFG. CO. Member of Acorn's Family of Companies | ZURN

Floor Drains and Grates

Nickel-bronze floor drains are for use in kitchens, restrooms, and other foot traffic areas. No. 11U236 flashing collar drain body can be used for on-grade areas where a waterproofing membrane is required. The strainer can be adjusted up to 2" above from the top of the drain body.

Roof Drains

Protect connected piping and drain sump from debris. For use on flat roofs.

JR Smith—Nos. 11U241 and 11U242 include flashing collar and mounting screws. No. 11U240 retrofits most existing roof drains to accept a Jay R. Smith dome.

Watts—No. 1WXC4 includes flashing clamps with integral gravel stop and self-locking poly dome.

Zurn—Nos. 22F375 and 22F376 include a combination membrane flashing clamp/gravel guard. Nos. 22F405 and 22F406 feature a a drop-in connection to ease installation.

Laboratory Sinks

- Drain opening: 1½" NPT

ORION®

Easy-to-install and clean sinks are constructed of virgin polyethylene and resist intense chemical environments. Integral flange permits either above- or below-counter mounting. Gray color. Meet ASTM D1248 (except cup sinks).

DURA-WARE

Wall mount design with seamless welded construction and deck with an integral self-draining soap dish. Satin finish. No. 49T917 includes a faucet.

Lavatory Systems and Decks

Chemical-, stain-, burn-, and impact-resistant solid Terreon® surface is easily repaired.

Terreon® RE—Wall-hung decks with 5½" deep bowls are recycled Terreon RE solid surface material (25% preconsumer recycled content and 8% rapidly renewable material). Include mounting bracket, attached 3" coved backsplash, and 3" integral front and side aprons.

- **Single-hole faucet mounting**

Terreon® SafeCare™—Ligature-resistant design with the molded sprayhead securely attached and flush to the lavatory bowl to reduce ligature points.

Terreon® ELX Series —Lavatory systems include electronic faucets, soap dispensers, and feature a personal space design, plus an innovative mounting plate to ease installation in retrofit or new construction. Seamless bowl design helps reduce mold and delamination.

Frequency®—Multi-height fixture is accessible by adults, children, and those with disabilities. Include battery-operated faucet.

- ½" nominal supply and 1½" drain connections
- Flow rate: 0.5 gpm

Terreon® MG-Series—A free-spinning collar helps protect aerator from vandalism. The infrared sensor shuts off water flow after 30 to 45 sec. if user attempts to trigger constant operation by covering the sensor.

Low-Lead 304 Stainless Steel Washstations and Scrub Sinks

SANI-LAV Supplier Diversity

Washstations are constructed of 16-ga. and scrub sinks of 14-ga. 304 stainless steel and include 10" and 9" backsplash, basket strainer, and connecting tube and fittings. Electronic models have an AC- or battery-powered sensor to activate water flow and a mixing check valve. Go to Grainger.com® for additional models with 0.5 gpm or other flow rate, and with included faucet. Certified NSF 2 for food equipment and NSF/ANSI 372, except Nos. 36LH82 to 36LH91 are NSF only.

SANI-LAV Low-Lead Stainless Steel Handwashing Sinks

- 2" drain opening

Hands-free, 1-station sinks reduce the threat of cross-contamination and feature a corrosion-resistant, electropolished finish that enhances cleanliness. Include connecting tube and fittings, and strainer with basket. Single Valve models come with a mixing check valve. Wall Mount models include a wall-mounting bracket. Electronic models have an AC- or battery-powered sensor to activate water flow and include a mixing check valve. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Drop-In Stainless Steel Sinks

ELKAY Just

- 3½" drain opening

Sinks feature bowl drawn from 18-ga., 304 (18-8) nickel-bearing stainless steel with coved corners having 1¾" vertical and horizontal radii, except for 300 series stainless steel models.

Elkay—Lustertone® sinks Nos. 1JYU4 and 4YK14 to 4YK17 feature a satin finish and include sound deadening material which minimizes sound and vibration for quieter sink operation.

Just—Fully undercoated to insulate for sound and reduce condensation. Grip Rim helps reduce installation time by up to 50%. Interior and top are polished to a nonporous finish with highlighted bowl rim. Include mounting hardware.

Stainless Steel Sink Packages

ELKAY Just CHICAGO FAUCETS a Geberit company

- Classroom Sinks have 3½"-dia. drain opening

Drop-In Sink with Faucet, No. 4YJ89—Includes 20-ga. 304 stainless steel sink, 5" gooseneck faucet, classroom bubbler, and 3½" basket strainer.

Classroom Sinks, Nos. 11U323 and 13G638—Feature 18-ga. 304 stainless steel sink. No. 11U323 includes a 2-handle high-arc faucet with restricted swing spout, classroom bubbler, and 3½" basket strainer. No. 13G638 includes vandal-resistant faucet, bubbler, and drain.

Classroom Sink, No. 13G653—16-ga. 304 stainless steel top and enclosure, 18-ga. bowl. Includes concealed vandal-resistant faucet, vandal-resistant bubbler, flat grid strainer, p-trap, and wall clip.

Bar Sink/Faucet, No. 3H330—Gooseneck faucet has swing spout and 2 handles. 5⅛" deep compartment. Satin-finish sink is sound-deadened on bottom. Includes strainer basket. 23-ga.

Bar Sink, No. 4YJ88—Includes high-swing spout faucet and strainer basket. 18-ga.

Deck Mount Bubblers—Low-lead, chrome-plated fittings. No. 5JC22 has a mouth guard that flexes on impact and a built-in adjustable flow control.

ESSENTIAL XTR

Features SoundSeal® technology for quiet operation and MultiGrind® technology that provides 2 grinding stages versus 1 stage in many standard disposers. Includes a SinkTop Switch™ accessory with button and power to ease activation.

COMMERCIAL FOOD SERVICE EQUIPMENT

- 1-yr. manufacturer's warranty

Note: New installations require a mounting adapter, sold separately on this page or go to Grainger.com® and search for "disposer, mounting adapter."

LC-50

Automatic reversing motor provides longer life and trouble-free operation. Stainless steel grind chamber. Disposer mounting included.

SS Series

Triple-lip motor seal protects motor from water damage while a secondary spring-loaded oil seal provides double protection against water and loss of grease. Cast nickel-chrome alloy stationary and rotating shredding elements provide long life and corrosion resistance and are designed for reverse-action grinding. Feature overload protection and stainless steel grind chamber.

COMMERCIAL MOUNTING ADAPTERS

Use to mount commercial food waste disposer to sink.

Septic Assist™, No. 2YB95

Bio-Charge® technology injects a microorganism-rich solution that breaks down and liquefies waste for safe handling in a septic tank.

Excel™, No. 2YB91

Jam-Sensor® circuit automatically increases motor torque up to 500%.

Endura® models have 1-pc. plastic tank with an airtight silicone seal, easy-to-open latching system, and an innovative removable baffle design. Nos. 40D985 and 40D986 have a removable dual-screen filtration system with coarse and fine screens. Watts models are epoxy-coated steel with removable baffle and deep seal trap with cleanout. Recessed or floor mounted. Zurn® grease interceptors have a Dura-Coated steel body, flow diffusing baffle, integral trap, and external vented inlet flow control. The Lint Interceptor No. 38UK34 separates out solids such as buttons, lint, stones, and string, and can handle up to 3 washing machines. Unit features an acid-resistant coated interior and exterior, a non-skid secured cover with removable lift handle, aluminum lint intercepting secondary screen assembly, and permanent primary straining baffle with ⅜" dia. perforated holes. Model has a high inlet and low outlet.

Faucet Spout Shapes

Low-Arc—Short spout sits close to sink basin and reduces splashing.

Mid-Arc—Taller than low-arc-spout with a curve under spout with space for filling bigger vessels.

Straight—Spout extends straight out from faucet body.

Angled Straight—Spout extends straight out and points down into the sink at an angle.

Gooseneck—Tallest spout extends high above counter and curves to point directly into sink.

Metering-Handle Deck-Mount Bathroom Faucets

Metering handles allow users to push handle down to activate the faucet. No gripping required allowing those with limited mobility to operate faucet. Handle controls the start of water flow, but not the duration. Water flow shuts off automatically to save water in public or high-traffic restrooms. Deck-mount installs on a flat surface such as a sink or counter. Chrome finish. ADA Compliant.

Gooseneck-Spout Sensor Single-Hole Wall-Mount Bathroom Faucets

Hands-free sensor eliminates the spread of germs and starts/stops water flow without touching faucet. Tall gooseneck-spout extends above counter and curves to point straight down into sink. Single wall-mount hole installation saves counter space. Chrome finish. ADA Compliant.

Sensor Two-Hole Deck-Mount Centerset Bathroom Faucets

Hands-free touchless sensor controls the flow of water and stops the spread of germs. Water shuts off automatically after a preset time to save water costs. Presetting water temperature is required. Two-hole centerset deck-mount faucets install onto sinks that have two centered holes that are 4" apart when measured from center-of-hole to center-of-hole. Chrome finish. ADA Compliant.

Automatic Hand Soap Dispensers

Hands-free automatic counter dispensers release a premeasured amount of hand soap to help prevent waste. Infrared sensors detect the presence of hands so users don't have to touch the handle or dispenser opening.

Two-Hole Centerset Kitchen Sink Faucets

Faucets install onto kitchen sinks that have two centered holes that are 4" apart when measured from center-of-hole to center-of-hole. They can cover an unused middle hole on sinks with a three-hole centerset pattern. These one-piece units have a spout and one or two handles on a single base. Deck mount, except No. 26Y192 is wall mount. Chrome finish.

Showerheads

TRIDENT™ MOEN Buy it for looks. Buy it for life.® American Standard SPEAKMAN® SLOAN CHICAGO FAUCETS a Geberit company ZURN DELTA see what Delta can do Encore by Component Hardware

- Chrome finish, except Encore items are white

Trident®— Showerheads are solid brass and meet ANSI A112.18.1M.

Moen—Nonmetallic spray face and shell with a brass swivel ball assembly.

American Standard—Turbine spray has a flow rate of 1.5 gpm, to reduce water use by up to 40%.

Speakman—Deliver a fully-customizable shower experience. The pressure-compensating plunger system helps optimize low water pressure for more efficient performance. Nos. 2WLN7 and 6MPG1 have lower flow rate to conserve water.

Sloan—Each features spring-loaded spray disk to prevent particle clogging. Nos. 5E548 and 4FEZ4 have a thumbscrew volume control. No. 5E547 features an adjustable spray direction and mounting plate with vandal-resistant screws.

Chicago Faucets—Solid brass construction with chrome-plated finish. Fixed and adjustable heads.

Zurn—Nos. 6RKG7 and 6RKH2 are self-cleaning; No. 6RKH2 adds a flow compensator to maintain a constant flow rate. No. 6RKG5 is vandal resistant.

Encore—SaniShower® with SANIGUARD® antimicrobial product protection utilizes a patented, inorganic silver-ion technology to inhibit the growth of non-public health bacteria, molds and mildews that can cause odors, staining and product deterioration on the treated surfaces of the product itself, and to keep the treated surfaces cleaner and fresher between routine cleanings. This product is not a disinfectant and does not protect the user or others against food-borne illnesses or disease-causing bacteria, viruses, or germs. Always use proper hygiene and cleaning procedures.

Delta, No. 4NLN2—H_2Okinetic Technology® creates a warm water "blanket" using 36% less water than standard showerheads.

No. 2WLN5

No. 2YDV7

Shower and Tub Faucets

MOEN Buy it for looks. Buy it for life.® DELTA see what Delta can do TRIDENT™ Bradley CHICAGO FAUCETS a Geberit company POWERS™

For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Moen—Each features adjustable temperature limit stop. No. 4FA79 includes handheld shower, 30" slide bar, drop ell, dual check valve, 69" metal hose, and hardware including vandal-resistant screws.

Delta—The 3-function Multichoice Universal valves allow process changes to be made to the shower at any time, without altering behind-the-wall plumbing.

Bradley—Positive shutoff of hot supply when cold supply is shut off. Adjustable set point within temperature range. Dirt and lime resistant.

Trident®—No. 6PB38 includes a showerhead, arm, flange and tub spout, and an extra acrylic knob.

Chicago Faucets—Temperature limit stop protects against fluctuations in water pressure and temperature to prevent scalding.

Powers—Thermostatic valves respond almost instantly to dramatic pressure changes. Self-contained cartridge simplifies maintenance and repair.

NEOPERL®

Faucet Aerators & Outlets

- OEM quality

Connect to the end of a faucet spout to direct the water stream, minimize splashing in sink basins, and reduce water use. These parts are added to faucets for flow-control applications and used as replacements for aerators that block water flow, cause the water stream to sputter, or allow dripping from the spout.

Unthreaded Faucet Aerator Inserts and Flow Restrictors—Easily fit into faucet spouts.

Threaded Faucet Aerators and Flow Restrictors—Thread onto faucet spouts.

Faucet Outlet Adapters—Allow the faucet spout to be fitted with different types of aerators and adapted to suit different applications.

Faucet Aerator Installation Tools—Aid in the installation and removal of clogged faucet aerators. Tools fit a compatible aerator and faucet without causing damage.

Automatic Flush Valves

American Standard—Touchless Sensor models have a chrome finish and a proximity sensor for hygienic hands-free operation with mechanical override. Self-cleaning piston helps prevent clogging and reduces maintenance. Range and flush volume can be adjusted manually or with Remote Control No. 24X050, sold separately on Grainger.com®.

Sloan®—Sensor-activated with exposed, diaphragm-type flushing system. 3-sec. delay. Courtesy Flush™ override button on toilet type only.

Zurn—Include actuator, control stop, internal seals, piston kit, sensor, and vacuum breaker.

For information on standards, go to Grainger.com®.

No. 2VEF7

ECOS®/G2—Install exposed, battery-powered, sensor-operated flush valves on floor-mounted or wall-hung top spud bowls to help meet ADA requirements. Features include 3-sec. flush delay, manual override button, unit reset, and unit shutdown. 3-yr. warranty. Urinal models have courtesy flush 24 hr. after last flushing cycle. Full units include valve body, tailpiece, and control stop.

SOLIS®—Automatic, sensor-operated flush valves use photovoltaic technology to convert just about any natural or artificial light source into power; no need for electricity. Include LED low-battery indicator, instructional wall plates, vandal-resistant stop cap, and manual override.

Dual Flush Retrofit Kit No. 2VEF9

Dual-Flush—Detect user presence and duration to determine more-efficient effective flush volume—reduced cycle for liquid waste; full cycle for solid waste. Split-button design allows manual activation of either cycle. Include control module, flex tube diaphragm, installation strap wrench, screwdriver device, and 2 instructional wall plates.

Retrofit Kits—Top mount kits fit all Sloan® valve assemblies and do not include valve body, tailpiece, or control stop. They allow a flushometer to be converted from manual to automatic operation for hands-free flushing. Include a full diaphragm assembly.

Automatic Side-Mount Flush Valves

Toilet No. 2VEH8

- 11½" rough-in

Battery powered valves can be used with floor-mounted or wall-hung top and spud bowls. Suitable for left- or right-hand supply; include valve body, tailpiece, control stop, and 4 C batteries. User-friendly 3-sec. delay. 5-yr. manufacturer's warranty, except Zurn models are 3 yr. only. ADA compliant when properly installed. All models meet ASSE 1037, ANSI/ASME A112.19.2, except Zurn models.

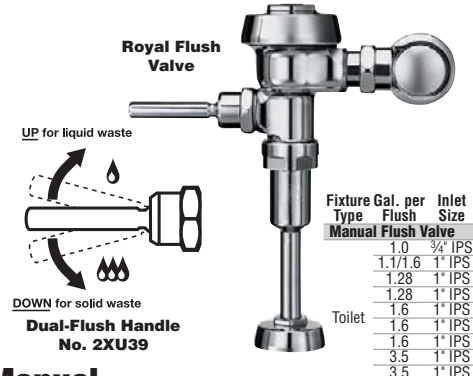
Manual Piston-Type Flush Valves



No. 16T981

- Recommended operating pressure: 20 psi (flowing), 80 psi (static)
- 11½" rough-in

Feature self-cleaning brass piston with integral wiper spring that helps prevent clogging and reduce maintenance. Nonhold-open handle, chloramine-resistant EPDM seals. Valves include sweat solder kit, cover tube, and wall flange. ADA compliant.

Dual-Flush Handle No. 2XU39

Manual Dual Flush Valves and Dual Flush Valve Handle—Handle converts existing flush valves to water-conserving units that allow either full or partial flushes: lift handle for liquid waste; push down for solid waste. Handle has a green-colored antimicrobial coating. Include 2 instructional wallplates.

Manual Flush Valves

SLOAN

Exposed valves have free-spinning, vandal-resistant stop caps. Integral vacuum breaker helps prevent back siphoning. ADA-compliant oscillating, nonhold-open handles and an adjustable tailpiece. For information on standards, go to Grainger.com®.

Automatic Flush Valve Retrofit Kits

ADA compliant, except for Nos. 448N68 and 448N69. All include 4 C batteries and installation tools.

Side-Mount—Install without water shutoff. Adjustable sensor range. 24-hr. courtesy flush option. Valve body, supply stop, or vacuum breaker not included, except No. 20CM32 comes with a valve body. No. 24PR18 has a valve that automatically closes upon loss of power or water pressure and requires no reset. No. 448N68 is for Sloan® and Zurn® flush valves. No. 448N69 is for American Standard® and GEM® flush valves. Nos. 2TET9, 2TEU1, and 1GAB3 allow you to slide the unit over the flush valve handle and tighten for fast installation. No. 1GAB3 has a true mechanical override.

Top-Mount—No. 40D676 is all-metal construction with easy battery access. Nos. 25CH55 and 25CH56 have a chrome-plated plastic E-Z Flush® sensor unit with 3-yr. battery life.

Elongated Tankless Toilets

American Standard ZURN SLOAN

For Toilet Seats, see page 2758.

- White, vitreous china

Tankless toilets draw on high-pressure water supplies to deliver forceful flushing in a single flush. They work with a flush valve (flushometer) sold separately, see Grainger.com®, that connects directly to wall or floor plumbing line. High-pressure flush reduces water use and reduces chance of clogs or backups. Tankless toilets have a louder flush, but refill faster and cleaner.

Wall-Mount with Top Spud and Back Outlet—Top spud works with exposed flush valve for unblocked access. Back outlet connects to wall waste line.

Wall-Mount with Back Spud and Back Outlet—Back spud works with a concealed flush valve to prevent tampering. Back outlet connects to wall waste line.

Floor-Mount with Top Spud & Bottom Outlet—Top spud connects to flushometer and has unblocked access during maintenance. Bottom outlet connects to floor waste line.

Wall-Mount Tankless Toilet Kits with Flush Valve & Top Spud, Back Outlet Bowl—Flushometer sits atop rear rim of bowl for unblocked access. Top spud connects to the flush valve and back outlet connects to wall waste line.

Floor-Mount Tankless Toilet Kits with Flush Valve & Top Spud, Bottom Outlet Bowl—Flushometer sits atop rear rim of bowl for unblocked access. Top spud connects to the flush valve and bottom outlet connects to floor waste line.

Elongated Gravity Toilet Bowls and Tanks

American Standard GERBER

- White vitreous china

Toilets draw water from their attached tank to supply a quieter, low-pressure flush in low-traffic settings (20 to 30 flushes per day). These fixtures rely on gravity to move water from the tank into the toilet bowl for flushing. Separate bowl-and-tank design allows components to be replaced individually during installation and maintenance.

Floor-Mount Toilet Bowls—Toilet bowls pair with a gravity tank to form a two-piece toilet. These fixtures fasten to the floor for stability and have mounting holes for attaching a tank.

Gravity Toilet Tanks—Tanks pair with a gravity-style bowl to form a two-piece toilet. These fixtures house the flushing mechanism and other working parts of the toilet. They have mounting holes for attaching a bowl and a cover for keeping dust and debris out of the tank.

Toilet Tank
No. 29VL39

Pressure-Assist Elongated Toilets and Tanks

Toilets provide a strong flush like tankless toilets without requiring a high-pressure water supply. They're typically used in high-traffic settings where water pressure is too low for a tankless toilet. These fixtures have a pressure vessel within their water tank that pressurizes air and releases it with the water for a high-powered flush.

Floor-Mount Toilet Bowls with Back Outlet—Back outlet fastens to the floor and has a back connection to a wall waste line.

Floor-Mount Toilet Bowls with Bottom Outlet—Bottom outlet fastens to the floor and has a bottom connection to a floor waste line.

Toilet Tanks—House the pressure vessel, flushing mechanism, and other working parts of the toilet. These fixtures have mounting holes for attaching to a pressure-assist toilet bowl. Cover keeps dust and debris out of the tank.

SLOAN FLUSHMATE

Flushmate® System

Pressurized flush eliminates double flush and clogs and saves water. Fewer moving parts extends service. If toilet tank includes a flush handle, Handle Replacement Kit No. 30KE38 is also required. Flush Cartridge No. 1ATP5 is a replacement part for most Flushmate systems.

Note: Flushmate system is not sold as a retrofit component for a gravity-fed toilet.

Intelli-Flush™ No. 2VRN9—Enables touchless, electronic sensor operation of existing Flushmate units to reduce the spread of bacteria and recurring odors. Include wall-mounted sensor, flush module, battery pack, batteries, override button, and chrome trim.

Toilet Seats

Bolt onto a toilet bowl and can be lifted on their hinges for cleaning and full access to the bowl. Oval or circular rings should match the bowl shape to keep the seat stable. Use seats on new installs or for replacement.

Standard Elongated—Elongated or oval seats are about 2" longer from back to front than standard round bowls. Extra space improves comfort for adults and helps reduce drips and mess around bowl.

Standard Round—Fit round toilet bowls and are generally more comfortable for smaller users. Seat help prevent slipping and drips.

Elongated Lift—Taller than standard elongated seats to make it easier for people to lower and lift themselves off toilet. Assists people with mobility issues, inflammatory conditions, and arthritis.

Child—Smaller seats and typically found in schools, pediatric hospitals, and daycare facilities.

Elongated Safety-Arm—Elongated (oval) seats with support arms for people to lift or lower themselves when using the toilet. Arms attach to the underside of the seat and extend from the sides to provide grab bars for lifting and balance. Used in rehab facilities, hospitals, nursing homes, and senior-living centers.

Round Lift—Taller than standard round seats to help people get on and off the toilet. Designed to assist people with mobility issues, inflammatory conditions, and arthritis.

Oversized Toilet Seats for Round or Elongated Bowls—Universal fit with a higher weight capacity to support heavy users. The wider-than-standard surface area fits any bowl shape. Commonly used on toilets for bariatric patients in hospitals and medical facilities.

Urinals

American Standard SLOAN ZURN

- White vitreous china
- Flush valve sold separately, see Grainger.com®

Wall-mount flush-valve urinals with top spud are off-the-floor fixtures that allow thorough cleaning, connect to a wall waste line, and work with an exposed flush valve for unblocked access during maintenance. These fixtures have a lower weight capacity than floor-mounted fixtures, but provide a streamlined look and full access for cleaning the floor and urinal surfaces. Includes back opening for waste line and a spud atop the fixture for connecting to a flush valve (flushometer). Meet all ANSI and ASME water conservation requirements.

Wall-Mount Waterless Urinals

Conserve water by eliminating liquid waste without flushing. They connect to a wall waste line and rely on gravity to direct urine into the drain, so there's no need for a flushing mechanism. These water-free urinals use a trap or cartridge with a layer of sealant that blocks odors from rising out of a waste line while allowing urine to pass through. Use to reduce water consumption in dry climates and other areas where water is scarce. WaterSense Certified.

Prison and Ligature-Resistant Toilet and Sink Combination Units

- For institutional showerheads, go to Grainger.com®

Ligature-resistant sinks, toilets, and urinals withstand damage and prevent vandalism, abuse, or potential for self-harm or suicide in correctional and mental health facilities where antiligature or security products are needed. Sinks have push-button controls that provide hot and cold water at 0.5 gpm, and a penal bubbler. Metering valves can be set for 5- to 60-sec. operation and cannot be held open. These specialized toilets and urinals include enclosed flush valves, so they can't be used to tie off cords or fabric strips.

Whitehall BestCare™

Ligature Resistant Bathroom Faucets

No. 38C415

Cone-spout faucets are shaped like a rounded triangle, or cone. Their shape makes it difficult to use the faucets as a ligature point or a point of self-harm, making them suitable for hospitals, prisons, and mental health settings. These dual-metering-handle two-hole centerset deck-mount faucets have two handles that users push down on to start the flow of water. Each handle is operated separately to control the hot and cold water supplies. Metering-handle faucets let users control the start of the flow of water but not the duration, as the water flow shuts off automatically. Chrome faucet finish.

Partition Hardware Packages and Accessories

Packages include all brackets and fasteners needed to assemble partition components. Fasteners are Torx® head screws that require a T25 Torx Power Bit, sold separately on page 702. For Toilet Partition Folding Shelf, order No. 4WMJ7 on page 2760. No Sight Kit No. 5JME1 helps block the sight line between the door and pilasters of the compartment for added privacy.

Acoustical Ceiling Tiles

Armstrong CEILING SYSTEMS

- White color

A variety of edge types and surface textures to help you create the look you want. All tiles are durable, sag resistant, and have a Flame Spread Index 25 or less. Smoke Developed Index 50 or less. Include a 30-yr. limited system warranty against visible sag, mold/mildew, and bacterial growth (excludes Fissured, Cortega, and Designer products). Mineral fiber construction, except No. 32WN11 is ceramic, mineral fiber and Nos. 6EJL6 and 5UTN3 are fiberglass. All tiles have Class A Fire resistance, according to ASTM E84 and CAN/ULC S102 surface burning characteristics.

No. 5NGJ4

Fine Fissured—Provide excellent sag resistance.

Fine Fissured Second Look—Feature an innovative look where the panel is scored to look like a 2 ft. x 2 ft. panel. Compatible with standard suspension systems.

Fissured—Economical panels come with a directional, fissured visual offers standard acoustics.

Dune and Dune Second Look—Nondirectional appearance helps reduce installation time. Durable, scratch-resistant surface.

Cirrus®—Offer a medium-textured appearance with excellent noise reduction, sag resistance, high light reflectance, antimicrobial treatment, and no added formaldehyde.

Cirrus® Profiles - Classic Step™—Medium-textured appearance with edge details carved into the panels. Compatible with standard suspension systems.

Ultima®—Offer excellent noise reduction, sag resistance, high light reflectance, antimicrobial treatment, and no added formaldehyde, in a high-impact, scratch-resistant, washable, and scrubbable tile.

Georgian™ High Washability and Clean Room VL—Unperforated Class 5 (Class 100) tiles offer high wash and scrubbability, and soil resistance. Impact and scratch resistant. Meet USDA/FSIS guidelines for food processing areas.

Ceramaguard®—Nondirectional, smooth texture and resistant to chemical fumes. For high-moisture locations including shower areas and indoor parking garages.

Clean Room FL—Unperforated Class 5 (Class 100) tiles feature high scrubbability and washability plus impact, scratch, and soil resistance. Meet USDA/FSIS guidelines in food processing areas.

Kitchen Zone™—Easy-to-clean panels feature up to 20% more light reflectance than vinyl-covered gypsum. The smooth surface meets USDA/FSIS guidelines in food processing areas.

Suspension Systems—SuperLock™ clips allow fast and secure connections with accurate alignment. Rotary stitching adds strength. PeakForm™ profile increases strength and grid stability. Meet seismic requirements when installed according to ICC ESR-1308.

RAIN BIRD

Drip Irrigation Systems

Deliver water directly to plant base to help conserve water and reduce costs.

Drip Bubbler Conversion Kit No. 14U327—Converts a pop-up spray into a water-saving micro bubbler zone.

Drip Emitter Conversion Kit No. 14U326—Converts an existing pop-up spray head into a water-saving drip system with 6 spot watering emitters. Ideal for larger planting beds and gardens.

Micro Bubblers (Nos. 2EMD7, 2EMD8) and Micro Sprays (Nos. 2EME2, 2EME3)—Low-flow watering heads with drip irrigation systems. Adjustable flow and radius and uniform emission patterns. Include stake and ¼" fitting.

RAIN BIRD

Professional Underground Sprinkler Systems

Timers and Sensor—Use No. 4KEA1 to adjust watering schedule for each area and the flow rate of each sprinkler. Has an auto rain shut-off to stop operation during rain, and easily linked to existing drip watering systems. No. 38W346 has easy-to-use controls, a LCD, and battery backup. No. 2EMF1 is adjustable to varying amounts of rainfall.

Valves—Use antisiphon valves in above-ground applications. Feature an adjustable flow control and help prevent wasteful misting when water pressure is too high. Use automatic in-line valves in pump systems where backflow protection is already installed.

Mini Rotors—Can be installed in the same zone as large rotors. Lower flow reduces potential runoff, allowing more heads per zone to reduce overall system complexity and cost.

Pop-Up Gear-Driven Rotors and Nozzles—Design protects the easily adjustable rotors from dirt and debris. Mount on riser No. 1YHC6 to clear tall shrubs.

Pop-Up Spray Heads with Nozzles—The 4", 6", and 12" 1800 Series spray heads are efficient at low pressures.

Plastic Cam and Groove Fittings

Fittings consist of a grooved male nipple (adapter) and a female cam (coupler or camlock) that tighten together to form a seal.

Polypropylene—Lightweight thermoplastic material resists UV, weathering, corrosion, and ozone damage. Commonly used with treated water, corrosive solvents, and chemicals.

Nylon—Fittings resists corrosion and changes in humidity, withstand higher temperatures than polypropylene, and won't scratch delicate surfaces.

Glass-Filled Polypropylene—Uses glass fibers for extra reinforcement. This combination adds stability and strength to resist UV, weathering, and corrosion.

Dust Caps and Plugs—Seal leaks and prevent debris or other materials from entering the connection.

BANJO CORPORATION

Polypropylene Dry Disconnect Couplings

Designed for connecting and disconnecting hoses and pipelines without spills or leaks. Couplings have a double ball valve design that allows maximum flow, but they cannot be uncoupled in an open position. FKM gasket. For use in pharmaceutical, chemical, and petroleum processing.

Metal Cam and Groove Fittings

These fittings are hose couplings that connect or disconnect pipe, tubing, or hose without tools. Also known as camlock couplings, they consist of a grooved male adapter and a female cam that tighten together to form a seal.

304 and 316 Stainless Steel— Withstands pressure and high temperatures and resists corrosion when handling caustic chemicals, and other potentially corrosive fluids, oils, and gases.

Aluminum—Lightweight and corrosion-resistant, aluminum is more susceptible to scratches and wear unless alloyed with other metals for strength. Commonly used with water, chemicals, hydraulic oil, and petroleum products.

Forged Brass—Compatible with copper or zinc piping and maintains its durability at high temperatures, is highly conductive, and resists corrosion. Commonly used with water, coolants, gasolines, hydraulic oils, and petroleum products.

Dust Caps and Plugs—Seal leaks and prevent debris or other materials from entering the connection.

BANJO CORPORATION ★GA GRAINGER APPROVED

Cam and Groove Gaskets

Flat cam and groove gaskets fit in the grooves of the female camlock or cam and groove couplings. The pressure of the fitting pushes against the gasket to create a tight seal.

ELKHART BRASS Fire Fighting Equipment

MOON American, Inc.

DIXON The Right Connection

No. 6CLV4

Hydrant Wrenches

For use in lawn care, in-plant maintenance, and municipal hydrant applications.

No. 15Z087 can be used as a spanner on pin lug couplings or rocker lug couplings.

No. 3LX25 is a spanner for pin lug and rocker (sensible) leg couplings.

No. 20JP20 has spanner for pin or rocker lug couplings.

No. 15Z086 can be used as a spanner on pin lug couplings.

No. 15Z088 can be used as a spanner on Storz couplings or rocker lug couplings.

No. 6CLV4 is compatible with pin or rocker lug couplings. 5 pentagonal holes fit most hydrant nut sizes.

Item	Fits	L	Head Material	Handle Material	Brand	Item No.
Adjustable Hydrant Wrench	1½ in to 3 in Nut	16 9/16 in	Iron	Iron	GA	6AKC0

Black and Galvanized Malleable Iron Pipe Fittings—Class 150

GA GRAINGER APPROVED

ANVIL INTERNATIONAL Building Connections That Last

- For max. pressure see Pressure-Temperature Ratings table, except ¾" to 4" Anvil square head plugs
- Anvil domestic fittings are made in the U.S.
- Anvil Floor Flanges: not rated for pressure service

Black fittings are interchangeable with black cast-iron or steel. For low-pressure plumbing applications including air, water, natural gas, and steam.

For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

GA Models – Black and Galvanized—Galvanized fittings resist rust and corrosion.

Anvil Domestic – Black and Galvanized—Fittings are suitable for low-pressure plumbing applications including air, water, natural gas, and steam. Galvanized fittings can resist corrosion and rust.

Merchant Couplings—Steel couplings for use with Schedule 40 pipe.

Anvil Square Head Plugs—Cast-iron or steel for use with Schedule 40 pipe. Max. pressure: 125 psi at 350°F.

Black Steel Forged Flanges—Class 150

- Max. pressure: 150 psi at 72°F; 150 psi saturated steam

Bolt 2 flanges together with a gasket to form a tight seal that still allows easy access to the piping system. For use with air, water, oil, natural gas, or steam (except where noted). Meet ASTM A-197, ASTM A47, ASME B16.3 and B16.4, UL Listed, FM Approved.

BLIND

Sometimes referred to as "blanking flanges," and are commonly used to blank off pipelines, valves, and pumps, or as an inspection cover.

SLIP-ON

Flange slips over the pipe and is then fillet welded. Excellent for fabricated applications.

SOCKET WELD

Similar to slip-on flanges, but a lip supports the pipe while welding. Counter-bored to accept the pipe before being fillet welded. Flange and pipe bore are the same, to enhance flow characteristics.

THREADED

Use with standard wall (Schedule 40) pipes and nipples; no welding is required.

Flange Covers

- VF Series
- Flexible fit
- Yellow color for high visibility

These durable, easy-to-apply vinyl flange covers provide a snug fit for flanged and beaded tubes. They help to seal out moisture and dust during shipment, and help to protect flange surfaces.

Welded Steel Schedule 40 Pipe Nipples

★ GA GRAINGER APPROVED BECK

- Max. pressure in accordance with ASME B31.1 or B31.3 for SCH 40 pipe
- Domestic items are made in the U.S.

All nipples have a weld bead inside and are NPT threaded at both ends. Black nipples are interchangeable with black cast iron or steel. Galvanized nipples resist rust and corrosion. For low-pressure plumbing applications including air, water, oil, natural gas, and steam. Certified for use in potable water applications. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Welded Steel Schedule 40 Pipe

Black

- Max. pressure: 150 psi CWP at 150°F, 150 psi saturated steam; except Nos. 40L305 to 40L310 are 150 psi CWP at 360°F

Pipe is carbon steel with NPT threads. Black steel pipe is interchangeable with black cast-iron or black malleable iron pipe. All pipe is for use in low-pressure plumbing applications including air, water, oil, natural gas, and steam. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Malleable Iron Pipe Fittings—Class 300

- Fittings max. pressure: see Pressure-Temperature Ratings table
- Unions max. pressure: 600 psi CWP at 150°F; 230 psi Steam at 550°F

Thicker walls of Class 300 fittings withstand higher pressures than Class 150 fittings. Suitable for air, water, oil, natural gas, and steam. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Note: Fittings must be used with properly rated nipples. For more fitting sizes, go to Grainger.com®.

Black Steel Schedule 80 Welded Pipe Nipples

GA GRAINGER APPROVED

- Max. pressure: 300 psi CWP at 550°F

Extra-heavy nipples handle higher pressures and more rugged service. NPT threads and electric resistance weld (ERW). For use in air, water, oil, and gas applications. Maximum pressure in accordance with ASME B31.3 Process Piping Code. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Note: Nipples must be used with properly rated fittings.

Black Steel Schedule 80 Seamless Pipe Nipples and Pipe

- Max. pressure for pipe nipples is in accordance with ASME B31.1 or B31.3 for SCH 80 pipe; max. pressure for pipe: 300 psi CWP at 550°F in accordance with ASME B31.3 Process Piping Code

Seamless construction provides excellent protection against leaks. Thicker walls allow use in higher-pressure applications than Schedule 40 nipples and pipe. For use in high-pressure applications with air, water, oil, natural gas, and steam. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Note: Nipples and pipe must be used with properly rated fittings.

Find them on page 2820, or for our full selection go to **Grainger.com®** and search for **Pipe Thread Sealant Tapes**.

Black and Galvanized Steel Schedule 160 Pipe Nipples and Seamless Pipe

★ GA GRAINGER APPROVED

Close Thread Nipple

Pipe

NPT threads at both ends allow for easy connections. Use with air, water, oil, natural gas, and steam in high-pressure, high-temperature boiler applications. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Note: Nipples must be used with properly rated fittings.

Forged Steel Black and Galvanized Pipe Fittings—Class 3000

GA GRAINGER APPROVED

ANVIL INTERNATIONAL Building Connections That Last

- GA max. pressure: 3000 psi at 72°F
- Anvil socket weld fittings max. pressure in accordance with ASME B31.1 or B31.3 for SCH 80 pipe
- Anvil fittings are made in the U.S.

Thick-walled fittings offer you a simple, economical installation and are ideal for use with water and oil in chemical, petrochemical, pulp, paper, shipbuilding, waste incineration, and semiconductor industry applications. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Note: Fittings must be used with properly rated nipples and pipe. GA 90° street elbows are not recommended for pressure above 600 psi.

WELDBEND

Carbon Steel Flanges

- Temp. range: -20° to 100°F

Suitable for use in chemical refineries, fertilizer and petrochemical plants, and in gas, oil, and water transmission systems. Also suitable for use in LNG plants, nuclear power plants, and in thermal power stations. Flanges meet ASME B16.5.
